ASIA'S STAR BRANDS Asian brands have come of age, and no longer can be seen as "also rans" to their Western competitors. The problem is, very little has been know about them. Paul Temporal's book fills this gap, with a series of practical 'brand biographies' which chart both the growing pains and the growth potential of the new contenders from the East. It's vital reading for anyone committed to doing business in Asia. - Miles Young, Chairman, Ogilvy & Mather, Asia Pacific China and Japan, as well as India and the Emirates, suggest remarkable achievements by local companies in the field of branding and brands. Such a revolution shall impact not only the regional markets but also the world economy and non-Asian firms. Paul Temporal's book provides spectacular business cases and broader key lessons. it should become a major reference for any practitioner and scholar, whether Asian or not. I rank it in my short list of relevant texts about competition and success in the coming years. - Professor Jean-Claude Thoenig, INSEAD A well-managed brand is the lifeline of any successful company. this helpful book explains how Asian companies have built their brands to create sustainable competitive advantage. Using up-to-date Asian case studies, it will help readers have a better understanding of the creation, management and evolution of brands. - Professor John Quelch,

LG Electronics launched its brand in the late 1950s and became a household name for electronics and appliances. As the company grew, so did its range of products and services. LG Electronics has now become renowned mobile technology. The company offers a range of LG smart phones; the latest of which include the LG V30. This new smart phone is scheduled to be released to the public in November of 2017. Since being announced, reviews on the new device have been overwhelmingly positive. The device has been lauded for its plethora of modern and innovative features as well as its appeal to a wider cross-section of the target market. Among the features that users will be able to enjoy is the 6 inch display outfitted with OLED FullVision, a 2.45 gigahertz processor, a 5 megapixel front facing camera and a 16 megapixel rear facing camera with outstanding resolution of 4656 by 3492 and LED flash.

interesting issue, given the current work on agents, is whether feature interactions will be more likely in systems with many autonomous agents performing tasks. The current demand for better and more convenient communications requires development of a variety of new services as quickly as possible. As the number of services becomes larger, however, feature interactions create incompatibilities between the various functions needed to implement them. In developing telecommunication systems, we now spend huge numbers of person-hours on software modifications and testing whenever a new function is added. Much of this time is spent on detecting and eliminating problems arising from feature interaction. In the future, as ever more services are offered, feature interactions will become a major bottleneck in the development of software for telecommunications systems. This book presents opinions on the technical problems involved in feature interactions and definitions of features and feature interactions.
