Balanced coverage of the entire life span is just one thing that distinguishes HUMAN DEVELOPMENT: A LIFE-SPAN VIEW, Seventh Edition. With its comprehensive, succinct, and applied coverage, the text has proven its ability to capture students' interest while introducing them to the issues, forces, and outcomes that make us who we are. Robert V. Kail's expertise in childhood and adolescence, combined with John C. Cavanaugh's extensive research in gerontology, result in a book with a rich description of all life-span stages and important topics. A modified chronological approach traces development in sequential order from conception through late life, while also dedicating several chapters to key topical issues. This organization also allows the book to be relatively briefer than other texts, a benefit given the enormous amount of information covered in the course. The authors provide theoretical and empirical foundations that enable students to become educated, critical interpreters of developmental information. A blend of basic and applied research, as well as coverage of controversial topics and emergent trends, demonstrates connections between the laboratory and life. Child Development: Theories and Critical Perspectives provides an engaging and perceptive overview of both well-established and recent theories in child and adolescent psychology. A unique summary of traditional scientific perspectives alongside critical post-modern thinking will provide readers with a sense of the historical development of different schools of thought. The authors also place theories of child development in philosophical and cultural contexts, explore links between them, and consider the implications of theory for practice in the light of current thinking and developments in implementation and translational science. Early chapters cover mainstream theories such as those of Piaget, Skinner, Freud, Maccoby and Vygotsky, while later chapters present interesting lesser-known theorists such as Sergei Rubinstein, and more recent influential theorists such as Esther Thelen. The book also addresses lifespan perspectives, systems theory, and describes the latest thinking in areas ranging from evolutionary theory and epigenetics, to feminism, the voice of the child and Indigenous theories. The new edition of Child Development has been extensively revised to include considerable recent advances in the field. As with the previous edition, the book has been written with the student in mind and includes a number of useful pedagogical features including further reading, discussion questions, activities, and websites of interest. Child Development: Theories and Critical Perspectives will be essential reading for students on advanced courses in developmental psychology, education, social work and social policy, and the lucid style will also make it accessible to readers with little or no background in psychology.
