Head formation requires the well-orchestrated and harmonised development of various tissues and organs within the craniofacial complex. A big variety of signaling pathways are involved in this process by controlling cell proliferation, migration, differentiation, tissue morphogenesis, homeostasis and regeneration. Deregulation and malfunction of these signaling molecules may lead to mild or severe craniofacial pathologies. This eBook is a collection of articles dealing with a variety of important signals involved in the control of developmental and pathological events of craniofacial

organs and tissues. These recent advances show the importance of signaling pathways in craniofacial physiology and pathology and generate important new knowledge aiming the development of new pharmaceutical products that mimic and/or block the actions of specific molecules.

This textbook provides a practically applicable resource for understanding the surgical oncology management of pancreatic cancer. It discusses relevant aspects of anatomy and pathophysiology along with the

latest diagnostic techniques. Insightful descriptions are then provided detailing how to perform critical surgical procedures when treating these patients. Relevant perioperative management strategies and emerging themes in cancer biology critical to understanding and treating the disease are also described. The need for cross-discipline collaboration to facilitate and enhance innovation within the discipline is reinforced throughout the text. Each chapter presents the relevant current clinical standards along

with areas of controversy in both research and clinical practice within “pearls and pitfalls” sections. Textbook of Pancreatic Cancer: Principles and Practice of Surgical Oncology is a detailed work covering the basic material important to trainees as well as advanced curriculum for established specialists in the field from a multi-disciplinary perspective. Therefore, it is crucial resource for all practicing and trainee professionals who encounter these patients in their day-to-day clinical practice.

This idea-packed resource takes systems and complexity sciences out of blue-sky territory and into the concrete world of contemporary healthcare practice. Beginning with a new reframing of health and illness, its chapters redesign traditional disease-centered models of care into modern, health-centered—and patient-centered—health service systems. The approaches shown here combine innovation and common sense to recognize and attend to patients' needs across areas including health education and training, information accessibility, health service organization and delivery, and disease in individual context. The variety of solutions applied to this wide spectrum of issues shows the

This book is written for researchers, undergraduate students and postgraduate students, physicians and traditional medicine practitioners who develop research in the field of neurosciences, phytochemistry and ethnopharmacology or can be useful for their practice. Topics discussed include the description of depression, its biochemical causes,

the targets of antidepressant drugs, animal and cell models commonly used in the research of this pathology, medicinal plants and bioactive compounds with antidepressant activity used in traditional medicine, advances in nanotechnology for drug delivery to the brain and finally the future challenges for researchers studying this pathology. Distillation Principles and Practice Second Edition covers all the main aspects of distillation including the thermodynamics of vapor/liquid equilibrium, the principles of distillation, the synthesis of distillation processes, the design of the equipment, and the control of process operation. Most textbooks deal in detail with the principles and laws of distilling binary mixtures. When it comes to multi-component mixtures, they

refer to computer software nowadays available. One of the special features of the second edition is a clear and easy understandable presentation of the principles and laws of ternary distillation. The right understanding of ternary distillation is the link to a better understanding of multi-component distillation. Ternary distillation is the basis for a conceptual process design, for separating azeotropic mixtures by using an entrainer, and for reactive distillation, which is a rapidly developing field of distillation. Another special feature of the book is the design of distillation equipment,

i.e. tray columns and packed columns. In practice, empirical know-how is preferably used in many companies, often in form of empirical equations, which are not even dimensionally correct. The objective of the proposed book is the derivation of the relevant equations for column design based on first principles. The field of column design is permanently developing with respect to the type of equipment used and the know-how of two-phase flow and interfacial mass transfer. 5* Doody's Review: 98/100!
