*In his most extraordinary book, the bestselling author of Awakenings and "poet laureate of medicine" (The New York Times) recounts the case histories of patients inhabiting the compelling world of neurological disorders, from those who are no longer able to recognize common objects to those who gain extraordinary new skills. Featuring a new preface, Oliver Sacks's The Man Who Mistook His Wife for a Hat tells the stories of individuals afflicted with perceptual and intellectual disorders: patients who have lost their memories and with them the greater part of their pasts; who are no longer able to recognize people and common objects; whose limbs seem alien to them; who lack some skills yet are gifted with uncanny artistic or mathematical talents. In Dr. Sacks's splendid and sympathetic telling, his patients are deeply human and his tales are studies of struggles against incredible adversity. A great healer, Sacks never loses sight of medicine's ultimate responsibility: "the suffering, afflicted, fighting human subject."*

*The present book contains the proceedings of two conferences held at the World Computer Congress 2010 in Brisbane, Australia (September 20–23) organised by the International Federation for Information Processing (IFIP). In the first part, the reader can find the proceedings of the 9th Human Choice and Computers International Conference (HCC9) organised by the IFIP Technical Committee TC9 on the Relationship Between ICT and Society. The HCC9 part is subdivided into four tracks: Ethics and ICT Governance, Virtual Technologies and Social Shaping, Surveillance and Privacy, and ICT and Sustainable Development. The second part consists of papers given at the Critical Information Infrastructure Protection Conference (CIP) organized by the IFIP Technical Committee TC11 on Security and Privacy Protection in Information Processing Systems. The two parts of the book are introduced by the respective Conference Chairs. Chapter 1 introduces HCC9, providing a short summary of the HCC conference series, which started in 1974, and explaining the overview of HCC9, detailing the rationale behind each of the tracks in this conference. The details related to the papers of each track are discussed by the Track Chairs in the respective introductions to the specific tracks of HCC9 (Chaps. 2, 10, 16 and 22). Finally, Chap. 22 introduces the CIP part. One of the high-quality, low-priced entries in Longman's Penguin Academics Series, A Short Guide to College Writing is a clear and authoritative brief rhetoric that emphasizes analysis, argument, and research in academic writing.*

This authoritative volume reviews the breadth of current scientific knowledge on subjective well-being (SWB): its definition, causes and consequences, measurement, and practical applications that may help people become happier. Leading experts explore the connections between SWB and a range of intrapersonal and interpersonal phenomena, including personality, health, relationship satisfaction, wealth, cognitive processes, emotion regulation, religion, family life, school and work experiences, and culture. Interventions and practices that enhance SWB are examined, with attention to both their benefits and limitations. The concluding chapter from Ed Diener dispels common myths in the field and presents a thoughtful agenda for future research.

A step-by-step guide to the preparation and writing of scientific papers and dissertations in the biological, physical and social sciences, offering advice on how to set and achieve writing objectives and how to structure and organize material.

*Careers in astronomy for women (as in other sciences) were a rarity in Britain and Ireland until well into the twentieth century. The book investigates the place of women in astronomy before that era, recounted in the form of biographies of about 25 women born between 1650 and 1900 who in varying capacities contributed to its progress during the eighteenth, nineteenth and early twentieth centuries. There are some famous names among them whose biographies have been written before now, there are others who have received less than their due recognition while many more occupied inconspicuous and sometimes thankless places as assistants to male family members. All deserve to be remembered as interesting individuals in an earlier opportunity-poor age. Placed in roughly chronological order, their lives*

**Siddhartha** is a 1922 novel by Hermann Hesse that deals with the spiritual journey of self-discovery of a man named Siddhartha during the time of the Gautama Buddha. The book, Hesse's ninth novel, was written in German, in a simple, lyrical style. It was published in the U.S. in 1951 and became influential during the 1960s. Hesse dedicated the first part of it to Romain Rolland and the second to Wilhelm Gundert, his cousin. The word Siddhartha is made up of two words in the Sanskrit language, siddha (achieved) + artha (what was searched for), which together means "he who has found meaning (of existence)" or "he who has attained his goals". In fact, the Buddha's own name, before his renunciation, was Siddhartha Gautama, Prince of Kapilvastu. In this book, the Buddha is referred to as "Gotama".

Quick-fix solutions to health inequalities are unlikely to be found in complex modern societies. Class or socio-economic status, gender, ethnicity and physical location all play their part in determining our chances of maintaining good health and securing good health care. This wide-ranging discussion by community leaders and workers, policy-makers and implementers, epidemiologists, public health researchers, economists, sociologists, an historian and medical

professionals addresses how health inequalities arise and provides ways of understanding and resolving them.

In the new edition of this widely popular guide, *Literature for Young Children: Supporting Emergent Literacy, Ages 0-8*, early childhood teachers and child-care professionals get the help they need to recognize high-quality children's literature and to learn to use it effectively to support emerging literacy development in infants, toddlers, preschoolers, and primary-age children. The authors, widely known as authorities in this field, explain how to use children's literature as a teaching tool and provide readers with a number of developmentally appropriate strategies for sharing literature with young children.

The field of educational psychology draws from a variety of diverse disciplines including human development across the life span, measurement and statistics, learning and motivation, and teaching. And within these different disciplines, many other fields are featured including psychology, anthropology, education, sociology, public health, school psychology, counseling, history, and philosophy. In fact, when taught at the college or university level, educational psychology is an ambitious course that undertakes the presentation of many different topics all tied together by the theme of how the individual can best function in an "educational" setting, loosely defined as anything from pre-school through adult education. Educational psychology can be defined as the application of what we know about learning and motivation, development, and measurement and statistics to educational settings (both school- and community-based).

One in five American children now live in families with incomes below the povertyline, and their

prospects are not bright. Low income is statistically linked with a variety of poor outcomes for children, from low birth weight and poor nutrition in infancy to increased chances of academic failure, emotional distress, and unwed childbirth in adolescence. To address these problems it is not enough to know that money makes a difference; we need to understand how. *Consequences of Growing Up Poor* is an extensive and illuminating examination of the paths through which economic deprivation damages children at all stages of their development. In *Consequences of Growing Up Poor*, developmental psychologists, economists, and sociologists revisit a large body of studies to answer specific questions about how low income puts children at risk intellectually, emotionally, and physically. Many of their investigations demonstrate that although income clearly creates disadvantages, it does so selectively and in a wide variety of ways. Low-income preschoolers exhibit poorer cognitive and verbal skills because they are generally exposed to fewer toys, books, and other stimulating experiences in the home. Poor parents also tend to rely on home-based child care, where the quality and amount of attention children receive is inferior to that of professional facilities. In later years, conflict between economically stressed parents increases anxiety and weakens self-esteem in their teenaged children. Although they share economic hardships, the home lives of poor children are not homogenous. *Consequences of Growing Up Poor* investigates whether such family conditions as the marital status, education, and involvement of parents mitigate the ill effects of poverty. *Consequences of Growing Up Poor* also looks at the importance of timing: Does being poor have a different impact on preschoolers, children, and adolescents? When are children most vulnerable to poverty? Some contributors find that poverty in the prenatal or early childhood years appears to be particularly detrimental to cognitive development and physical health. Others offer evidence that lower income has a stronger negative effect during adolescence than in childhood or adulthood. Based on their findings, the editors and contributors to *Consequences of Growing Up Poor* recommend more sharply focused child welfare policies targeted to specific eras and conditions of poor children's lives. They also weigh the relative need for income supplements, child care subsidies, and home interventions. *Consequences of Growing Up Poor* describes the extent and causes of hardships for poor children, defines the interaction between income and family, and offers solutions to improve young lives. JEANNE BROOKS-GUNN is Virginia and Leonard Marx Professor of Child Development at Teachers College, Columbia University. She is also director of the Center for Young Children and Families, and co-directs the Adolescent Study Program at Teachers College.

In *APPLE (SKIN TO THE CORE)*, Eric Gansworth tells his story, the story of his family—of Onondaga among Tuscaroras—of Native folks everywhere. From the horrible legacy of the government boarding schools, to a boy watching his siblings leave and return and leave again, to a young man fighting to be an artist who balances multiple worlds. Eric shatters that slur and reclaims it in verse and prose and imagery that truly lives up to the word heartbreaking.
