In Good Bread Is Back, historian and leading French bread expert Steven Laurence Kaplan takes readers into aromatic Parisian bakeries as he explains how good bread began to reappear in France in the 1990s, following almost a century of decline in quality. Kaplan describes how, while bread comprised the bulk of the French diet during the eighteenth century, by the twentieth, per capita consumption had dropped off precipitously. This was largely due to social and economic modernization and the availability of a wider choice of foods. But part of the problem was that the bread did not taste good. In a culture in which bread is sacrosanct, bad bread was more than a gastronomical disappointment; it was a threat to France's sense of itself. By the mid-1990s bakers rallied, and bread officially designated as "bread of the French tradition" was in demand throughout Paris. Kaplan meticulously describes good bread's ideal crust and crumb (interior), mouth feel, aroma, and taste. He discusses the breadmaking process in extraordinary detail, from the ingredients to the kneading, shaping, and baking, and even the sound bread should make when it comes out of the oven. Kaplan does more than tell the story of the revival of good bread in France. He makes the reader see, smell, taste, feel, and even hear why it is so very wonderful that good bread is back.

Food insecurity presents a serious and growing challenge in Canada’s northern and remote Aboriginal communities. In 2011, off-reserve Aboriginal households in Canada were about twice as likely as other Canadian households to be food insecure. Finding lasting solutions will require the involvement not just of policy-makers but of those most affected by food insecurity: people living in the North. In recognition of this problem, the Minister of Health, on behalf of Health Canada, asked the Council of Canadian Academies to appoint an expert panel to assess the knowledge of the factors influencing food security in the Canadian North and of the health implications of food insecurity for northern Aboriginal populations. The Expert Panel on the State of Knowledge of Food Security in Northern Canada found that food insecurity among northern Aboriginal peoples requires urgent attention in order to mitigate impacts on health and well-being. Aboriginal Food Security in Northern Canada: An Assessment of the State of Knowledge offers policy-makers a holistic starting-point for discussion and problem-solving. It also provides evidence and options to researchers and communities engaging in local responses.

Steiner's original contribution to human knowledge was based on his ability to conduct 'spiritual research', the investigation of metaphysical dimensions of existence. With his scientific and philosophical training, he brought a new systematic discipline to the field, allowing for conscious methods and comprehensive results. A natural seer from childhood, he cultivated his spiritual vision to a high degree, enabling him to speak with authority on previously veiled mysteries of life. "Having been born a freeman, and for more than thirty years enjoyed the blessings of liberty in a free State—and having at the end of that time been kidnapped and sold into Slavery, where I remained, until happily rescued in the month of January, 1853, after a bondage of twelve years—it has been suggested that an account of my life and fortunes would not be uninteresting to the public." -an excerpt

De Re Metallica brings together a wide variety of perspectives on metal use in the Middle Ages, a topic that has received less systematic scholarly attention than it deserves, given its central importance for medieval culture. Because of its strength, beauty, and prestige, metal figured prominently in many medieval contexts, from the military and utilitarian to the architectural and liturgical. Metal was a crucial ingredient in weapons and waterpipes, rose windows and reliquaries, coinage and jewelry. The 23 essays presented here, from an international team of scholars, explore the production and use of such objects, from the early Middle Ages to the sixteenth century, and from the British Isles, Iceland, and Scandinavia, to France, Germany, Spain and Italy. This thematic, chronological, and geographical scope will make this volume into a valuable resource for historians of art, technology, and culture.

“FEW PEOPLE think of life as a creative experiment. Most of us are so busy with routines that we take life for granted. We expect an endless routine of work, a hectic social life each weekend and two weeks’ vacation each year. I trust that the readers of this book will derive from it a new interest in life, a zest for doing what needs to be done, and a technique to live with joyous enthusiasm. “Looking at life from an inspired viewpoint you can see those things which are on the side of greatness and cease resisting the petty and the unimportant. Life is a process of intelligence. It always acts intelligently. Problems are the result of living life unintelligently. “The universe is actually a mental system. Its primary nature is the process of ideas becoming form. Every fact in your world is also an idea in your mind. To get new things in your world you must have new ideas in your consciousness. Few people do enough abstract thinking to create new ideas in their minds. They continually think about what they already know and have known for years. This explains the monotony of their lives. “Select the idea of some new experience you want and then think it without ceasing. Mind will deliver to you everything you need in order to accomplish your demonstration. This is far from being impossible. The great, the wise, and the true have proven this to be so. You have done it and so have your friends. You may not have thought of the process as being either spiritual or psychological. You intuitively knew a new idea. Your thinking in terms of this idea caused something to happen in your experience. “This book has been written for that large section of today’s population which is spiritually liberal and psychologically aware. Those bound by traditional beliefs will cast it aside. It is my desire that thousands will be helped and healed by reading these pages.”—Raymond Charles Barker

This book will help and inspire those who must live with the challenges posed by any chronic illnesses, and their caregivers: the relentlessness of symptoms; coming to terms with a life of comparative isolation; weathering fear about the future; facing the judgment of others; dealing with the health care system; and, for a spouse, partner, or other caregiver, adapting to so many unexpected and sometimes sudden life changes. The book begins with the tale of how Toni Berhard got sick and, to her and her partner’s bewilderment, stayed sick—detailing all the changes and losses that Toni had to experience as a result of her illness. Toni then goes on to describe how the teachings of the Buddha have taught her the spiritual practice of "how to be sick", meaning how to live a life of equanimity and joy despite her physical and energetic limitations. The chapters in Part Two offer simple practices, ranging from those that are traditionally

Buddhist, to others Toni devised after she fell ill, as well as a chapter on the work of Byron Katie, whom Toni has found particularly helpful. The reader need not be a Buddhist to benefit from these practices, or from Toni’s inspiring story.

The 18th century was a wealth of knowledge, exploration and rapidly growing technology and expanding record-keeping made possible by advances in the printing press. In its determination to preserve the century of revolution, Gale initiated a revolution of its own: digitization of epic proportions to preserve these invaluable works in the largest archive of its kind. Now for the first time these high-quality digital copies of original 18th century manuscripts are available in print, making them highly accessible to libraries, undergraduate students, and independent scholars. Medical theory and practice of the 1700s developed rapidly, as is evidenced by the extensive collection, which includes descriptions of diseases, their conditions, and treatments. Books on science and technology, agriculture, military technology, natural philosophy, even cookbooks, are all contained here. +++++ The below data was compiled from various identification fields in the bibliographic record of this title. The main goal of this study was to develop a strategy for monitoring environmental effects at a single exploratory offshore well on the east coast. Work carried out in the study consisted of consultations with scientists, regulators, & stakeholders; reviews of regulatory regimes; toxicity results relevant to exploratory activities; and development of a decision tree for determining when & how to conduct environmental effects monitoring (EEM). The study report first presents background on potential issues related to the environmental impacts of exploratory drilling, the characteristics of typical exploratory drill rigs & drilling muds, the regulatory regime in Canada & elsewhere, and the biological & other effects of drilling. It then summarizes EEM programs & their results for exploratory wells on the Scotian Shelf & Grand Banks; outlines EEM issues of concern for the Newfoundland & Nova Scotia offshore, and discusses issue similarities & differences between the two areas; and draws brief conclusions on the application of production EEM experience to exploratory drilling EEM. Finally, an EEM decision process based on three scenarios appropriate to the east coast is presented, along with recommended study designs to address the scenarios.

This is the ninth in the 300 series of circuit design books, again contains a wide range of circuits, tips and design ideas. The book has been divided into sections, making it easy to find related subjects in a single category. The book not only details DIY electronic circuits for home construction but also inspiring ideas for projects you may want to design from the ground up.

Because software in general and microcontroller programming techniques in particular have become key aspects of modern electronics, a number of items in this book deal with these subjects only. Like its predecessors in the 300 series, "308 Circuits" covers the following disciplines and interest fields of modern electronics: test and measurement, radio and television, power supplies and battery chargers, general interest, computers and microprocessors, circuit ideas and audio and hi-fi.

Aboriginal Food Security in Northern Canada: An Assessment of the State of Knowledge

Magic, Simon During suggests, has helped shape modern culture. Devoted to this deceptively simple proposition, During's superlative work, written over the course of a decade, gets at the aesthetic questions at the very heart of the study of culture. How can the most ordinary arts--and by magic, During means not the supernatural, but the special effects and conjurings of magic shows--affect people? Modern Enchantments takes us deeply into the history and workings of modern secular magic, from the legerdemain of Isaac Fawkes in 1720, to the return of real magic in nineteenth-century spiritualism, to the role of magic in the emergence of the cinema. Through the course of this history, During shows how magic performances have drawn together heterogeneous audiences, contributed to the molding of cultural hierarchies, and extended cultural technologies and media at key moments, sometimes introducing spectators into rationality and helping to disseminate skepticism and publicize scientific innovation. In a more revealing argument still, Modern Enchantments shows that magic entertainments have increased the sway of fictions in our culture and helped define modern society's image of itself.

All the fundamentals. No fluff. Learn more with less! A truly revolutionary American Government textbook, Christine Barbour's AmGov: Long Story Short, responds to the needs of today's students and instructors through brevity and accessibility. The succinct ten chapters are separated by tabs that make it easy to skim, flip, revisit, reorient, and return to content quickly. Reading aids like bullets, annotations and arrows walk students through important facts and break up the material in short, engaging bites of information that highlight not only what is important but why it's important. Though brief, this core book is still robust enough to provide everything that students need to be successful in their American Government course. Whether for the on-the-go student who doesn't have time to read and digest a lengthy chapter, or the instructor who wants a book that will stay out of their way and leave room for plenty of supplementary reading and activities, AmGov provides a perfectly simplified foundation for a successful American Government course.

The purpose of this book is to describe the historical setting out of which dispensationalism has grown, to establish what dispensationalism is, and to point out its implications for contemporary church life. Beginning with a survey of the major features of dispensationalism in relation to the historic beliefs of the church, the book then examines the origins of dispensationalism in the thinking of John Nelson Darby.What kind of man was Darby? What were the circumstances in which his theology was fashioned? What were the practical consequences of his theology of the church for his own day? Dr. Bass offers well-founded answers to these questions, helping readers make their own evaluations about dispensationalism.Dr. Bass traces the development of Darby's thought and practice through the Plymouth Brethren movement. He clearly demonstrates how Darby not only introduced new theological concepts, but new principles of interpretation. This emerging system of interpretation, with its particular chronology of future events, has largely informed the popular Left BehindÖ eschatology. In this light, it is clear that Bass's discussion of Darbyite dispensationalism is just as relevant as when his book first came out in 1960.This study is the result of an intensive and exhaustive search for accuracy of detail with a fair, non-argumentative style. Those wishing to do further research will appreciate his classified bibliography regarding dispensational literature.

In Paris in the Dark Eric Smoodin takes readers on a journey through the streets, cinemas, and theaters of Paris to sketch a comprehensive picture of French film culture during the 1930s and 1940s. Drawing on a wealth of journalistic sources, Smoodin recounts the ways films moved through the city, the favored stars, and what it was like to go to the movies in a city with hundreds of cinemas. In a single week in the early 1930s, moviegoers might see Hollywood features like King Kong and Frankenstein, the new Marlene Dietrich and Maurice Chevalier movies, and any number of films from Italy, Germany, and Russia. Or they could frequent the city's ciné-clubs, which were hosts to the cinéphile subcultures of Paris. At other times, a night at the movies might result in an evening of fascist violence, even before the German Occupation of Paris, while after the war the city's cinemas formed the space for reconsolidating French film culture. In mapping the cinematic geography of Paris, Smoodin expands understandings of local film exhibition and the relationships of movies to urban space.

This must-read for lovers of Stephen King's The Shining will leave readers breathless as Seda and her family find themselves at the mercy of a murderer in an isolated and snowbound hotel. Get ready for what Kirkus calls "A bloody, wonderfully creepy scare ride." When her mom inherits an old, crumbling mansion, Seda's almost excited to spend the summer there. The grounds are beautiful and it's fun to explore the sprawling house with its creepy rooms and secret passages. Except now her mom wants to renovate, rather than sell the estate—which means they're not going back to the city...or Seda's friends and school. As the days grow shorter, Seda is filled with dread. They're about to be cut off from the outside world, and she's not sure she can handle the solitude or the darkness it brings out in her. Then a group of teens get stranded near the mansion during a blizzard. Seda has no choice but to offer them shelter, even though she knows danger lurks in the dilapidated mansion—and in herself. And as the snow continues to fall, what Seda fears most is about to become her reality...

**"French Music and Trauma Between the World Wars illustrates that coping with trauma was a central concern for French musicians active after World War I. The losses and violent warfare of World War I shaped how interwar French musicians-from those fighting in the trenches and working in military hospitals to more well-known musicians-engaged with music. Situated at the intersections of musicology, history, sound and performance studies, and psychology and trauma studies, Resonant Recoveries argues that modernists' compositions and musical activities were sonorous locations for managing and performing trauma. Through analysis of archival materials, French medical, philosophical, and literary texts, and the music produced between the wars, this book illuminates how music emerged during World War I as an embodied technology of consolation. Resonant Recoveries demonstrates that music making came to be understood by French interwar musicians as a consolatory practice that enhanced their abilities to remember lost loved ones, gave them opportunities to perform their grief publicly and privately, allowed them to create healing bonds of friendship, and soothed them with sonic vibrations and the rhythmically regular bodily movements required in order to perform many French neoclassical compositions. In revealing the importance music making held for interwar French musicians, this book refigures French modernist music as a therapeutic medium for creators, performers, and audiences, while also underlining the importance of addressing trauma, mourning, and people's emotional lives in music scholarship"--**
