asked of students and registered or licenced practitioners in terms of EBP, it is difficult not to concede that this 'ask' is in many instances quite large and, occasionally, it may be unachievable. EBP has and continues to improve patient, client and user care. Yet significant questions concerning its most basic elements remain unresolved and, if nurses are to contribute to the resolution or reconfiguration of these questions then, as a first step, we must acknowledge

their existence. From a range of international standpoints and perspectives, contributors to this book focus on aspects of EBP that require development. This focus is always robust and at times it is unashamedly provocative. Contributors challenge readers to engage with anomalies that surround the subject and readers are asked to consider the often precarious assumptions that underpin key aspects of EBP. While both conflict and concord are evident among the various

And, across contributions, a self-assuredly critical stance towards EBP as currently practiced, conceptualized and taught coexists alongside respectful admiration for all who make it happen. Designed to be used by the student together with the sixth edition of Maternal and child health nursing by Adele Pillitteri. The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique

abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on
