This intriguing collection is designed to show how economists can play a more active role in designing and directing the nation's social institutions. most difficult problems facing society today. By creating markets where none existed before, the authors propose efficient, reliable, and profitable improvements to current systems of health insurance, financial markets, human organ distribution, judicial practice, bankruptcy and securities regulation, patenting, and transportation. Written in the entrepreneurial spirit, these essays show economics to be an ambitious, dynamic, and far-from-dismal science. The rapid changes that have taken place

globally on the economic, social and business fronts characterized the 20th century. The magnitude of these changes has formed an extremely complex and unpredictable decision-making framework, which is difficult to model through traditional approaches. The main purpose of this book is to present the most recent advances in the development of innovative techniques for managing the uncertainty that prevails in the global economic and management environments. These techniques originate mainly from fuzzy sets theory.

However, the book also explores the integration of fuzzy sets with other decision support and modeling disciplines, such as multicriteria decision aid, neural networks, genetic algorithms, machine learning, chaos theory, etc. The presentation of the advances in these fields and their real world applications adds a new perspective to the broad fields of management science and economics. and interest, which emphasizes the role played by private property rights. Ownership economics gives an alternative explanation of money and interest, proposing that operations enabled by property lead to interest and money, rather than exchange of goods. Like any other approach, it has to answer economic theory's core question: what is the loss that has to be compensated by interest? Ownership economics accepts neither a temporary loss of goods, as in neoclassical economics, nor Keynes's

temporary loss of already existing, exogenous money as the cause of interest. Rather, money is created as a non-physical title to property in a credit contract secured by a debtor's collateral and the creditor's net worth. This book is an edited English translation of a highly successful German text, and offers the first book-length treatment of a theory which has received much interest since its first appearance in articles in the late 1970s.

Insights from economics help decision makers at the state level understand how to raise and distribute funds for public schools in an equitable manner for both schools and taxpayers. Economics also can assist researchers in analyzing effects of school spending and teacher compensation on student outcomes.
