Volume 31 of Studies in Managerial and Financial Accounting (SMFA) covers contemporary issues in performance measurement and management control.

Accounting has an ever-increasing significance in contemporary society. Indeed, some argue that its practices are fundamental to the development and functioning of modern capitalist societies. We can see accounting everywhere: in organizations where budgeting, investing, costing, and performance appraisal rely on accounting practices; in financial and other audits; in corporate scandals and financial reporting and regulation; in corporate governance, risk management, and accountability, and in the corresponding growth and influence of the accounting profession. Accounting, too, is an important part of the curriculum and research of business and management schools, the fastest growing sector in higher education. This growth is largely a phenomenon of the last 50 years or so. Prior to that, accounting was seen mainly as a mundane, technical, bookkeeping exercise (and some still share that naive view). The growth in accounting has demanded a corresponding engagement by scholars to examine and highlight the important behavioural, organizational, institutional, and social dimensions of accounting. Pioneering work by accounting researchers and social scientists more generally has persuasively demonstrated to a wider social science, professional, management, and policy audience how many aspects of life are indeed constituted, to an important extent, through the calculative practices of accounting. Anthony Hopwood, to whom this book is dedicated, has been a leading figure in this endeavour, which has effectively defined accounting as a distinctive field of research in the social sciences. The book brings together the work of leading international accounting academics and social scientists, and demonstrates the scope, vitality, and insights of contemporary scholarship in and on accounting and auditing.

Sustainability requires companies to develop in an economically, environmentally and socially sustainable manner. Corporate sustainable development in turn requires movement towards cleaner production. In order to recognize the potential from cleaner production – reduced costs and fewer environmental impacts through the reduced use of materials – environmental management accounting (EMA) is a necessary information management tool. Environmental Management Accounting for Cleaner Production reveals a set of

tools for companies to collect, evaluate and interpret the information they need to estimate their potential to use cleaner production to realize cost savings and to make the best decisions about the available cleaner production options. EMA is therefore the key for driving environmental progress, cost savings, increased competitiveness and corporate sustainability through the means of cleaner production.

***As the second edition of Global Business Strategy, this book provides novel insights on how a firm can formulate a successful approach toward its global business from both the Western and Asian perspectives. In this respect, the book's overall goal is to bridge***

*the gap between these two different viewpoints. This second edition includes more recent business theories, techniques, and cases within the field of global business strategy. Specifically, it includes new theories and techniques like creating shared value (CSV), the global value chain, platform strategy, and business ecosystem. They are shown to be important tools for enhancing competitiveness and maintaining sustainability among firms in today's rapidly changing international business environment. This is very much evident today given the critical challenges arising from the trade tensions between the United States and China, emerging technologies such as artificial intelligence and digital transformation, and the unprecedented disruptions brought on by the coronavirus pandemic. We hope that this book will serve as a useful companion for students, business practitioners, policymakers, and the more general readers interested in issues related to competitiveness and business.*

*Filled with real-world case studies and examples of ethical dilemmas, Understanding Business Ethics, Third Edition prepares students and managers alike to make ethical decisions in today's complex, global environment. In addition to presenting information related to the Association to Advance Collegiate Schools of Business (AACSB), the text's 26 real-world cases profile a variety of industries, countries, and ethical issues in a way that is relevant and meaningful to students' lives. The Third Edition features new cases from well-known companies such as Disney and General Motors, new coverage of emerging topics such as big data and social media, expanded coverage of corporate social responsibility, and more. *eBook: Management Accounting for Business Decisions*

Designed for use in introductory or graduate-level managerial accounting courses, this text applies an objective-based approach to managerial accounting topics. Unlike traditional cost-accounting texts, Management Accounting emphasizes the critical role that information plays in decision making, strategy execution, and overall enhancement of a firm's value. Through problem-based learning and the business planning model (BPM), Management Accounting develops in students those competencies expected of today's business professionals. This innovative pedagogical approach stresses the understanding and application of the basic business process; risk assessment and its relation to business strategy; critical thinking, reasoning, and analysis; oral and written communication skills; and techniques for team building. Each chapter includes mini-cases, exercises, and problems built around the challenges faced by managers today. An integrated text-long continuing example of a fictitious

service business, C&F Enterprises, simulates the actual strategic planning process. Each chapter concludes with a Business Planning Application, an optional module that allows students to engage in a semester-long business planning simulation.

Management Accounting in Support of Strategy explores how management accounting can support the strategic management process of analysis, formulation, implementation, evaluation, monitoring, and control. If the management accountant is to add value to the business they need to understand how the business works. The toolbox available to the management accountant does not just contain the accounting techniques, but also includes the strategy models and frameworks described in this book. Armed with this array of tools the management accountant is well placed to add significant value to the business. The reader will gain an understanding of the strategic management framework, strategic models and tools, and how management accounting can support the strategic management process. It will be beneficial for undergraduate and postgraduate course students studying strategy or management accounting. The book will also enable practicing accountants to understand how they can make a significant contribution to the success of their organization by demonstrating how management accounting can be used in support of strategy.

In this book, Shank and Govindarajan demonstrate how strategic cost management - an analytical framework which relates meaningful accounting information to a firm's business strategy - is changing accounting practices in leading companies. Using case studies, including Ciba-Geigy, Ford, Motorola and Texas Instruments, they show how the tools of strategic cost management - value chain analysis, strategic positioning analysis and cost driver analysis - provide a sustainable competitive advantage over companies whose cost systems are in disarray.
