"As our eyes are drawn upward to the skyline of great cities, it's important to remember that these impressive constructions are able to reach such heights only

because their foundations are strong. In much the same way, being successful in the business world begins with fundamental courses like financial and managerial accounting. It is only when students have a firm grasp of concepts like the accounting cycle and managerial decision making that they have a base on which to stand, a strong foundation on which to grow. In this edition, as before, the Williams team has revised the text with a keen eye toward the principle of helping students establish the foundation they will need for future success in business. However, through new coverage of International Financial Reporting Standards and a revised globalization chapter, the Williams book also introduces students to larger themes and evolving concerns. This dual emphasis allows students to keep their eyes trained upward even as they become solidly grounded in accounting fundamentals"--

Nils Eikelmann describes the framework conditions for the application of value-based performance measures and critically analyses selected ones. The disclosure of value-based performance indicators is important in order to demonstrate the successful management of a company and to satisfy the increasing information needs of investors. However, companies adapt the developed theoretical concepts of value-based performance measures to their practical needs and thus investors are no longer able to compare the performance of companies. In addition, there is a variety of different metrics from which companies can choose. The empirical study aims to reduce existing research gaps and is divided into three parts: the analysis of annual reports of selected European companies, the calculation of a standardised value-based performance measure and a value relevance study in the form of an association study.
