This new edition of the Code is intended as a guide for all people responsible for the welfare of pigs under both intensive, deep litter and outdoor systems. Good welfare of farmed pigs will ensure that pigs cope well in their environment and that factors such as growth, reproductive performance, disease levels, injuries and death rates are within industry standards. The Code recognizes that the basic requirement for the welfare of pigs is a husbandry system, managed by trained and skilled stock-people to ensure that basic needs of pigs are met: * Readily accessible appropriate and sufficient food and water * Adequate shelter to protect from climatic extremes * Opportunity to display appropriate patterns of behaviour * Physical handling in a manner which minimizes the likelihood of unreasonable or unnecessary pain or distress * Protection from, and/or rapid diagnosis and correct treatment of injury or disease * Freedom for necessary movement including to stand, stretch and lie down * Visual and social contact with other pigs This Model Code of Practice for the Welfare of Animals has been prepared by the Animal Welfare Working Group (AWWG) for the Primary Industries Ministerial Council (PIMC). The AWWG is made up of representatives from CSIRO, Animal Health Australia, the Department of Agriculture, Fisheries and Forestry - Australia, and from each of the State Departments responsible for agriculture. Extensive consultation has taken place with industry and animal welfare organisations in the development of the Code. This new edition supercedes the Second Edition, SCARM Report 66

Handbook on Pig Farming and Pork Processing

The pig is one of the earliest domesticated animals and plays an integral part in a number of peasant economies in the tropics, for example in Oceania and Southeast Asia. In several African countries and others such as Thailand, increasingly intensive pig production has played a significant role in the overall economic growth and the feeding of an expanding urban population. Furthermore, although in some circumstances pigs do compete with humans for food resources, they are also very versatile at utilizing byproducts and wastes that are not suitable for human consumption. There is therefore considerable potential for developing pig production in the tropics, and this book provides an accessible guide to the subject for students, farmers and advisory workers. It is translated from an original French edition compiled by the Institut d'Élevage et de Médecine Vétérinaire des Pays Tropicaux.
