Sixty-five sweet and savory recipes, plus tons of tips, trivia, and photos! This is the ultimate guide to maple syrup, with Sixty-five recipes, instructions on tapping and evaporating, and an overview of the fascinating history of maple syrup in the United States. Not just a cookbook, it offers a comprehensive look into the world of maple syrup, complete with archival images and tutorials on the process. With recipes for maple-pecan sticky buns, maple-glazed duck, maple lemon bars, and much more, this beautifully illustrated guide comes from the producers of Crown Maple, a leading organic maple syrup—carried by gourmet food markets and used in many of the world's best kitchens, including NoMad, Eleven Madison Park, Bouchon, Lincoln, and more.

Mathematics for Physical Science and Engineering is a complete text in mathematics for physical science that includes the use of symbolic computation to illustrate the mathematical concepts and enable the solution of a broader range of practical problems. This book enables professionals to connect their knowledge of mathematics to either or both of the symbolic languages Maple and Mathematica. The book begins by introducing the reader to symbolic computation and how it can be applied to solve a broad range of practical problems. Chapters cover topics that include: infinite series; complex numbers and functions; vectors and matrices; vector analysis; tensor analysis; ordinary differential equations; general vector spaces; Fourier series; partial differential equations; complex variable theory; and probability and statistics. Each important concept is clarified to students through the use of a simple example and often an illustration. This book is an ideal reference for upper level undergraduates in physical chemistry, physics, engineering, and advanced/applied mathematics courses. It will also appeal to graduate physicists, engineers and related specialties seeking to address practical problems in physical science. Clarifies each important concept to students through the use of a simple example and often an illustration Provides quick-reference for students through multiple appendices, including an overview of terms in most commonly used applications (Mathematica, Maple) Shows how symbolic computing enables solving a broad range of practical problems

Tree-by-tree Guide to Buying, Maintaining and Problem Solving

Problem Solving is essential to solve real-world problems. Advanced Problem Solving with Maple: A First Course applies the mathematical modeling process by formulating, building, solving, analyzing, and criticizing mathematical models. It is intended for a course introducing students to mathematical topics they will revisit within their further studies. The authors present mathematical modeling and problem-solving topics using Maple as the computer algebra system for mathematical explorations, as well as obtaining plots that help readers perform analyses. The book presents cogent applications that demonstrate an effective use of Maple, provide discussions of the results obtained using Maple, and stimulate thought and analysis of additional applications. Highlights: The book's real-world case studies prepare the student for modeling applications Bridges the study of topics and applications to various fields of mathematics, science, and engineering Features a flexible format and tiered approach offers courses for students at various levels The book can be used for students with only algebra or calculus behind them About the authors: Dr. William P. Fox is an emeritus professor in the Department of Defense Analysis at the Naval Postgraduate School. Currently, he is an adjunct professor, Department of Mathematics, the College of William and Mary. He received his Ph.D. at Clemson University and has many publications and scholarly activities including twenty books and over one hundred and fifty journal articles. William C. Bauldry, Prof. Emeritus and Adjunct Research Prof. of Mathematics at Appalachian State University, received his PhD in Approximation Theory from Ohio State. He has published many papers on pedagogy and technology, often using Maple, and has been the PI of several NSF-funded projects incorporating technology and modeling into math courses. He currently serves as Associate Director of COMAP's Math Contest in Modeling (MCM).

A collection of American culinary history including cookbooks, menus and ephemera from the 16th through to the 21st century. Through this culinary archive researchers can explore changing attitudes towards diet and health, homemaking, commercial dining and the industrialisation of food production. The material has been collected over many years by Jan Longone, an adjunct curator in the University of Michigan Special Collections Research Center, and her husband University of Michigan Emeritus Professor Daniel T. Longone.

The purpose of this guide is to give a quick introduction on how to use Maple. It primarily covers Maple 12, although most of the guide will work with earlier versions of Maple. Also, throughout this guide, we will be suggesting tips and diagnosing common problems that users are likely to encounter. This should make the learning process smoother. This guide is designed as a self-study tutorial to learn Maple. Our emphasis is on getting you quickly up to speed. This guide can also be used as a supplement (or reference) for students taking a mathematics (or science) course that requires use of Maple, such as Calculus, Multivariable Calculus, Advanced Calculus, Linear Algebra, Discrete Mathematics, Modeling, or Statistics.

From buying equipment to tapping your own trees to boiling the sap, this is the classic, best-selling guide to making maple syrup. This little book swept maple sugarin' buffs off their feet when it first appeared and is still the top-selling guide to the craft after nearly 30 years in print. Like the previous editions, this one tells you how you can make maple syrup right in your own backyard without having to build a sap house or buy buckets, holding tanks, evaporators and other expensive paraphernalia. Provides detailed "how-to" information, and makes some new and noteworthy revelations-including tips sugarers across the country have shared with the author.

Rapid technological developments in the last century have brought the field of biomedical engineering into a totally new realm. Breakthroughs in material science, imaging, electronics and more recently the information age have improved our understanding of the human body. As a result, the field of biomedical engineering is thriving with new innovations that aim to improve the quality and cost of medical care. This book is the first in a series of three that will present recent trends in biomedical engineering, with a particular focus on electronic and communication applications. More specifically: wireless monitoring, sensors, medical imaging and the management of medical information.

Packed with information to help you make the most of your time and money, including comprehensive transportation information, suggested itineraries, full-color maps, and advice on local culture, food, and language. Detailed listings give the low-down on the best hotels, hostels, bars, and restaurants, while "treat yourself" suggestions provide inspiration for when to splurge. Whether you want to take a slow boat down the Mekong, feast on dim sum in Hong Kong, kick-back on a white-sand beach in Thailand, or explore the temples of Bagan in Myanmar, this updated edition of The Rough Guide to Southeast Asia on a Budget is the ultimate companion to travel in Southeast Asia.

Linear Algebra: An Introduction Using MAPLE is a text for a first undergraduate course in linear algebra. All students majoring in mathematics, computer science, engineering, physics, chemistry, economics, statistics, actuarial mathematics and other such fields of study will benefit from this text. The presentation is matrix-based and covers the standard topics for a first course recommended by the Linear Algebra Curriculum Study Group. The aim of the book is to make linear algebra accessible to all college majors through a focused presentation of the material, enriched by interactive learning and teaching with MAPLE. Development of analytical and computational skills

is emphasized throughout Worked examples provide step-by-step methods for solving basic problems using Maple The subject's rich pertinence to problem solving across disciplines is illustrated with applications in engineering, the natural sciences, computer animation, and statistics

Publisher description: This book is a reference for librarians, mathematicians, and statisticians involved in college and research level mathematics and statistics in the 21st century. Part I is a historical survey of the past 15 years tracking this huge transition in scholarly communications in mathematics. Part II of the book is the bibliography of resources recommended to support the disciplines of mathematics and statistics. These resources are grouped by material type. Publication dates range from the 1800's onwards. Hundreds of electronic resources-some online, both dynamic and static, some in fixed media, are listed among the paper resources. A majority of listed electronic resources are free.
