This book offers clinical physicians and plastic surgeons a detailed and comprehensive overview of the nonsurgical techniques used for rejuvenation of the lips and eyes. A key aim is to provide practical guidelines for patient selection in order to optimize the choice of treatment in different circumstances. These guidelines will assist in ensuring that the selected rejuvenation technique and the number of applications are appropriate to the specific disorder being treated, thereby maximizing benefits and minimizing side effects. The book explains pretreatment evaluation and describes a wide variety of rejuvenation techniques, including the use of hyaluronic acid fillers, botulinum toxins, skin needling, chemical peels, radiofrequency, ultrasound, and fractional lasers (ablative and nonablative). Contraindications to and complications of the various treatments are clearly identified. A notable feature is the emphasis placed on the role of combined treatments and how they can work in a complementary way to deliver optimal outcomes. The integrated, less invasive approach to periorbital and lip rejuvenation described here by acknowledged experts in the field will enable practitioners to choose with confidence the best aesthetic procedures and innovative tools for their patients.

If you are considering any kind of facial enhancement, from minor and non-invasive treatments such as simple injections or a laser treatment to more involved surgical procedures such as a full-on facelift, this is your resource. Clear and concise, with detailed surgical instructions, Master Techniques in Otolaryngology–Head and Neck Surgery: Facial Plastic Surgery is the latest addition to the highly regarded Master Series in Otolaryngology. Chapters cover the most critical and relevant topics in facial plastics & reconstructive surgery, including trauma, oculoplastic, rhinoplasty, and cosmetic procedures. Each follows an identical organizational structure to make it easier to review and digest important information across multiple surgical procedures.

Traditionally, professional medical and surgical society meetings, journals, and texts are single-specialty driven to accommodate specific specialists with information most important to them. A consequence of this structure is that it can create an unintentional and artificial barrier to sharing knowledge that can benefit patient outcomes. Cosmetic and reconstructive surgeons, more than ever, are seeking to know what other specialists are doing. This publication, the first of a series, focuses on the brow and upper eyelid rejuvenation and presents varied and complementary techniques from the core specialties of Plastic surgery, Oculoplastic surgery, Facial plastic surgery, and Dermatology to address all aspects of rejuvenation procedures of the upper face. Surgical and non-invasive techniques are presented concisely, focusing on time-tested as well as novel procedures. The most talented and accomplished subspecialists in their respective fields provide insights into such topics as Preoperative Evaluation for the Upper Eyelid and Brow; Aesthetic Enhancements in Upper Blepharoplasty; Asian Upper Lid Blepharoplasty; Prevention and Intraoperative Management of Blepharoplasty Complications; Ptosis Repair in Aesthetic Blepharoplasty; Adjunctive Fat Grafting of the Brow/Upper Lid; The Open Brow Lift; Adjunctive Skin Care of the Brow and Upper Lid; among many others. Specific techniques, Patient perspective and goals, and clear anatomic descriptions are presented with each procedure, with several offering technique videos. Guest editors Babak Azzizadeh and Guy Massry strongly believe that, with more and varied practitioners with different training taking on cosmetic and reconstructive surgeries or procedures, transparency of information is essential in order to expose the best information to all practitioners of this art and science.
