The utterly gripping story of the most outrageous case of cyber piracy prosecuted by the U.S. Department of Justice. A former U.S. Navy intelligence officer, David Locke Hall was a federal prosecutor when a bizarre-sounding website, CRACK99, came to his attention. It looked like Craigslist on acid, but what it sold was anything but amateurish: thousands of high-tech software products used largely by the military, and for mere pennies on the dollar. Want to purchase satellite tracking software? No problem. Aerospace and aviation

simulations? No problem. Communications systems designs? No problem. Software for Marine One, the presidential helicopter? No problem. With delivery times and customer service to rival the world's most successful e-tailers, anybody, anywhere—including rogue regimes, terrorists, and countries forbidden from doing business with the United States—had access to these goods for any purpose whatsoever. But who was behind CRACK99, and where were they? The Justice Department discouraged potentially costly, risky cases like this, preferring the low-hanging fruit that scored points from politicians and the public. But Hall and his colleagues were determined to

find the culprit. They bought CRACK99's products for delivery in the United States, buying more and more to appeal to the budding entrepreneur in the man they identified as Xiang Li. After winning his confidence, they lured him to Saipan—a U.S. commonwealth territory where Hall's own father had stormed the beaches with the marines during World War II. There they set up an audacious sting that culminated in Xiang Li's capture and imprisonment. The value of the goods offered by CRACK99? A cool \$100 million. An eye-opening look at cybercrime and its chilling consequences for national security, CRACK99 reads like a caper that

An award-winning scientist offers his unorthodox approach to childrearing:

“Parentology is brilliant, jaw-droppingly funny, and full of wisdom...bound to change your thinking about parenting and its conventions” (Amy Chua, author of Battle Hymn of the Tiger Mother). If you’re like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and

full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In Parentology, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear

children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redemptive—even when Conley's sassy kids show him the limits of his profession. Parentology teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You'll be laughing and learning at the same time.
