The NAACP Image Award-winning mayor of Washington, D. C., chronicles his life from his youth in the cotton fields of Mississippi through his efforts in the executive offices of the nation's Capital, covering such topics as his work as a civil rights activist, the drug scandal that led to his stint in federal prison and his victorious fourth term.

The new RISC-V Edition of Computer Organization and Design features the RISC-V open source instruction set architecture, the first open source architecture designed to be used in modern computing environments such as cloud computing, mobile devices, and other embedded systems. With the post-PC era now upon us, Computer Organization and Design moves forward to explore this generational change with examples, exercises, and material highlighting the emergence of mobile computing and the Cloud. Updated content featuring tablet computers, Cloud infrastructure, and the x86 (cloud computing) and ARM (mobile computing devices) architectures is included. An online companion Web site provides advanced content for further study, appendices, glossary, references, and recommended reading. Features RISC-V, the first such architecture designed to be used in modern computing environments, such as cloud computing, mobile devices, and other embedded systems Includes relevant examples, exercises, and material highlighting the emergence of mobile computing and the cloud

The performance of software systems is dramatically affected by how well software designers understand the basic hardware technologies at work in a system. Similarly, hardware designers must understand the far-reaching effects their design decisions have on software applications. For readers in either category, this classic introduction to the field provides a look deep into the computer. It demonstrates the relationships between the software and hardware and focuses on the foundational concepts that are the basis for current computer design.

The very best of the world's best researchers have discovered a way to develop Africa: Way Omega. Now Africa's heads of state are at a summit to approve it. If they do, it promises Africa will start developing immediately. Unknown to the summit are aggrieved conspirators plotting to defeat Way Omega and replace it with a rival strategy: Path Alpha. Their path, they say, is the only way. Should the summit still follow Way Omega, or make a U-turn? Fathers of Nations is a satire on

contemporary African politics.

This new edition has been fully revised to bring pharmacologists and trainees fully up to date with the latest developments in the field of medical pharmacology. Beginning with an introduction to general pharmacological principles, the following sections discuss drugs for common and less common disorders found in different regions of the body. The seventh edition includes new drugs, as well as the latest therapeutic guidelines from authoritative sources such as the World Health Organisation (WHO) and the British National Formulary (BNF). Each topic includes key point summary boxes as well as illustrations, flowcharts and tables to enhance learning. A 'problem-directed study' question at the end of each chapter helps trainees test their knowledge. An extensive appendices section includes a list of essential medicines, drugs that should/shouldn't be prescribed in pregnancy and lactation, and suggestions for further reading. Key points Fully revised, new edition presenting latest developments in medical pharmacology Includes therapeutic guidelines from WHO and BNF Problem-directed study questions and key point summary boxes enhance learning Previous edition published in 2008

This second volume of Language Issues in Comparative Education, following the tradition of the first, introduces the state of the field and calls attention to innovations described throughout. The chapters examine language-in-education policy change, describe implementational activities, and present strategic frameworks for research and advocacy.

This report provides neonatal and perinatal mortality estimates by country, regional groupings and globally. For countries that do not have data, models were developed to estimate mortality. Since data on deaths come from a number of different sources, the methods used to obtain the estimates are also described. Country-

specific estimates of stillbirth and early neonatal deaths are published here for the first time. Estimates of stillbirth deaths that occur during delivery (intrapartum) by regional groupings, as well as estimates of sex ratio in neonatal, early neonatal and stillbirth mortality for the developing world are also included.--Publisher's description.

Climate change poses many challenges that affect society and the natural world. With these challenges, however, come opportunities to respond. By taking steps to adapt to and mitigate climate change, the risks to society and the impacts of continued climate change can be lessened. The National Climate Assessment, coordinated by the U.S. Global Change Research Program, is a mandated report intended to inform response decisions. Required to be developed every four years, these reports provide the most comprehensive and up-to-date evaluation of climate change impacts available for the United States, making them a unique and important climate change document. The draft Fourth National Climate Assessment (NCA4) report reviewed here addresses a wide range of topics of high importance to the United States and society more broadly, extending from human health and community well-being, to the built environment, to businesses and economies, to ecosystems and natural resources. This report evaluates the draft NCA4 to determine if it meets the requirements of the federal mandate, whether it provides accurate information grounded in the scientific literature, and whether it effectively communicates climate science, impacts, and responses for general audiences including the public, decision makers, and other stakeholders.

The "Washington consensus" which ushered in neo-liberal policies in Africa is over. It was buried at the G20 meeting in London in early April, 2009. The world capitalist system is in shambles. The champions of capitalism in the global North are rewriting the rules of the game to save it. The crisis creates an opening for the global South, in particular Africa, to refuse to play the capitalist-imperialist game, whatever the rules. It is time to rethink and revisit the development direction and strategies on the continent. This is the central message of this intensely argued book. Issa Shivji demonstrates the need to go back to the basics of radical political economy and ask fundamental questions: who produces the society's surplus product, who appropriates and accumulates it and how is this done. What is the character of accumulation and what is the social agency of change? The book provides an alternative theoretical framework to help African researchers and intellectuals to

understand their societies better and contribute towards changing them in the interest of the working people.

Demonstrating what it is like to be an adult learner in today's world, this book focuses on language, literacy and numeracy learning. The authors explore the complex relationship between learning and adults' lives, following a wide range of individual students in various formal learning situations, from college environments to a young homeless project, and a drug support and aftercare centre. The study is rooted in a social practices approach and examines how people's lives shape their learning. Themes addressed range from: how literacy is learned through participation and how barriers such as violence and ill-health impact on people's lives. Based on a major research project and detailed, reflexive and collaborative methodology, the book describes a coherent strategy of communication and impact which will have a direct effect on policy and practice

This report provides a comprehensive assessment of the economic consequences of outdoor air pollution in the coming decades, focusing on the impacts on mortality, morbidity, and changes in crop yields as caused by high concentrations of pollutants.

A knowledge of bookkeeping and a basic understanding of the balance sheet, income statement and cash flow statement are indispensable to education in business and economics. Basics of Bookkeeping meets the needs of accounting students and practitioners in understanding the complexities of the subject. After a brief study in elementary accounting, the authors introduce the basics of cost accounting, financial accounting and financial management. The book provides a practical approach and each new topic is followed by simple examples. With its concise approach, this textbook will be valued by students with no background in accounting and finance. A companion website featuring extra exercises and multiple choice questions can be found at www.bookkeeping.noordhoff.nl.

"Amphibians are facing an extinction crisis, but getting to the facts has been difficult. "Threatened Amphibians of the World" is a visual journey through the first-ever comprehensive assessment of the conservation status of the world's

6,000 known species of frogs, toads, salamanders, and caecilians. All 1,900 species known to be threatened with extinction are covered, including a description of threats to each species and an evaluation of conservation measures in place or needed. Each entry includes a photograph or illustration of the species where available, a distribution map, and detailed information on range, population and habitat and ecology. Introductory chapters present a detailed analysis of the results, complemented by a series of short essays written by many of the world's leading herpetologists. Appendices include annotated lists of lower risk species and a country-by-country listing of threatened amphibians."--pub. desc.

This is the eBook of the printed book and may not include any media, website access codes, or print supplements that may come packaged with the bound book. The Principles and Practice of Cryptography and Network Security Stallings' Cryptography and Network Security, Seventh Edition, introduces the reader to the compelling and evolving field of cryptography and network security. In an age of viruses and hackers, electronic eavesdropping, and electronic fraud on a global scale, security is paramount. The purpose of this book is to provide a practical survey of both the principles and practice of cryptography and network security. In the first part of the book, the basic issues to be addressed by a network security capability are explored by providing a tutorial and survey of cryptography and network security technology. The latter part of the book deals with the practice of network security: practical applications that have been implemented and are in use to provide network security. The Seventh Edition streamlines subject matter with new and updated material — including Sage, one of the most important features of the book. Sage is an open-source, multiplatform, freeware package that implements a very powerful, flexible, and easily learned mathematics and computer algebra system. It provides hands-on experience with cryptographic algorithms and supporting homework assignments. With Sage, the reader learns a powerful tool that can be used for virtually any mathematical application. The book also provides an unparalleled degree of support for the reader to ensure a successful learning experience.

a great resource anywhere you go; it is an easy tool that has just the words you want and need! The entire dictionary is an alphabetical list of medical words with definitions. This edited collection provides unprecedented insight into the emerging field of multilingual education in Sub-Saharan Africa (SSA). Multilingual education is claimed to have many benefits, amongst which are that it can improve both content and language learning, especially for learners who may have low ability in the medium of instruction and are consequently struggling to learn. The book represents a range of Sub-Saharan school contexts and describes how multilingual strategies have been developed and implemented within them to support the learning of content and language. It looks at multilingual learning from several points of view, including 'translanguaging', or the use of multiple languages - and especially African languages - for learning and language-supportive pedagogy, or the implementation of a distinct pedagogy to support learners working through the medium of a second language. The book puts forward strategies for creating materials, classroom environments and teacher education programmes which support the use of all of a student's languages to improve language and content learning. The contexts which the book describes are challenging, including low school resourcing, poverty and low literacy in the home, and school policy which militates against the use of African languages in school. The volume also draws on multilingual education approaches which have been successfully carried out in higher resource countries and lend themselves to being adapted for use in SSA. It shows how multilingual learning can bring about transformation in education and provides inspiration for how these strategies might spread and be further developed to improve learning in schools in SSA and beyond. Chapter 3 of this book is freely available as a downloadable Open Access PDF under a Creative Commons Attribution-Non Commercial-No Derivatives 4.0 license available at <http://www.taylorfrancis.com>.

Human Nature and the Need for Social Connection

The Incredible Story of Marion Barry, Jr.

Threatened Amphibians of the World

Policy and Practice in Multilingual Education Based on Non-Dominant Languages

St Jude's is the remarkable story of an Australian girl from the bush who's busy transforming the lives of hundreds, if not thousands, of African children. Her name is Gemma Sisia, and she runs a school in Tanzania called The School of St Jude. Gemma's idea is simple. Her school is for the very poorest kids,

the ones whose families can't afford the clothes or books or even pencils to send their children to the supposedly "free" government schools. These are the children of illiterate parents, whose destiny is to remain trapped in a cycle of poor education, illiteracy and poverty. Her slogan is "fighting poverty through education". Gemma started St Jude's (named after the patron saint of hopeless causes) in 2002 with an 18-year-old volunteer teacher from Sydney, three kids and her own boundless energy. From those humble beginnings, the school now has over 850 students, and one of the best academic records in the country. There are plans for a second campus, and a long term aim of reproducing the hugely successful formula across Tanzania and East Africa. St Jude's is an astonishing success for kids who would otherwise have no hope and no future. This is a truly amazing story about how the determination of one person can help change the world.

The Second Edition of Curriculum Theory: Conflicting Visions and Enduring Concerns by Michael Stephen Schiro presents a clear, unbiased, and rigorous description of the major curriculum philosophies that have influenced educators and schooling over the last century. The author analyzes four educational visions—Scholar Academic, Social Efficiency, Learner Centered, and Social Reconstruction—to enable readers to reflect on their own educational beliefs and more productively interact with educators who might hold different beliefs.
