This practice-focused review guide and workbook covers 27 of the most commonly encountered health problems to outline the connections between pathophysiology, assessment, diagnosis, and management, with an emphasis on the clinical use of pathophysiologic concepts. Each chapter includes case studies to illustrate the application of pathophysiology principles to clinical situations with questions relating to patient history, physical examination findings, lab and diagnostic studies, therapies, and follow-up care. Each question is designed to promote clinical reasoning and a deeper understanding through application of the concepts presented. Information on differential diagnosis is included. Consistent presentation of each disease includes definition, epidemiology, pathophysiology, patient presentation (history, symptoms, and examination), differential diagnosis, keys to assessment, and keys to management. Algorithms are used to illustrate the sequential action of disease processes. Unique! Clinical link diagrams for each disorder clearly illustrate how pathophysiologic concepts play a role in patient care. Unique! Critical thinking questions in a fill-in-the-blank format in included for every case study to promote continual clinical reasoning based on the available data. Case studies give students the history, physical examination, lab and diagnostic test results, and course of treatment for a hypothetical patient. Up-to-date bibliographies provide reading lists of the most important and current research published on each disease. Perforated pages allow students to fill out the answer spaces in the case studies and turn them in to their instructors for evaluation. Suggested answers with rationales to case study questions are available to instructors who require the book, to facilitate the use of the cases as class assignments. Table of laboratory test values for quick reference.

A new pathophysiology textbook specifically for Australian and New Zealand nursing studentsUnderstanding Pathophysiology provides nursing students with the optimal balance between science, clinical case material and pharmacology. With entrenched bio-medical terminology that can be difficult to relate to nursing practice, pathophysiology is a complex, though essential, component of all undergraduate nursing courses. Understanding Pathophysiology: ANZ Edition overcomes this difficulty by presenting the topic in an accessible manner appropriate to undergraduate nursing students in Australia and New Zealand. The book prioritises diseases relevant to nursing students and presents them according to prevalence and rate of incidence in Australia and New Zealand. This focused approach prepares students for the presentations they will experience in a clinical setting. Understanding Pathophysiology: ANZ Edition explores each body system first by structure and function, then by alteration. This establishes the physiology prior to addressing the diseases relative to the system and allows students to analyse and compare the normal versus altered state. This local edition of Understanding Pathophysiology incorporates a lifespan approach and explores contemporary health with specific chapters on stress, genes and the environment, obesity and diabetes, cancer, mental illness and Indigenous health issues. Clinical case studies are included in each chapter, with each patient case study highlighting the relevant medical symptoms of a given disease within a clinical setting. This is then analysed with respect to the relevancy of each symptom, their respective affect on body systems and the best course of pharmacological treatment. Elsevier's Evolve website provides extensive support materials for students and lecturers. Also available for purchase with this textbook is an e-book, Pathophysiology Online – a set of online modules, and a mobile study guide application. • pathophysiology presented at an appropriate level for undergraduate nursing students in Australia and New Zealand • an adaptation of a US edition – Understanding Pathophysiology, 4th Edition • diseases are addressed according to prevalence, incidence and relevance • a 'systems' approach is incorporated with a 'lifespan' approach within the alterations chapters • a new section on contemporary health issues examines the effects of an aging population and lifestyle choices on a society's overall health • new chapters on topics including homeostasis; genes and the environment; obesity and diabetes; mental health and Indigenous health issues • chapter outlines and key terms appear at the beginning of each chapter • concept maps provide visual representation of the key concepts addressed in each chapter • clinical case studies feature in each chapter to bring pathophysiology into practice • helpful 'focus on learning' boxes in each chapter • key terms are bolded in the text and listed in the glossary • summaries of main points feature in each chapter • review questions at chapter end are accompanied by answers provided online
