Hepatitis, the leading indication for liver transplantation, is a straight-forward disease when it comes to diagnosis: it is a disease of pathology and is diagnosed by liver biopsy, with the result being either positive or negative. There is only one effective treatment: interferons. Nonetheless, new interferons are appearing on the market and Drs Foster and Goldin examine the use of each of these in the management of chronically infected patients. The authors have written a succinct, highly illustrated text for all those interested in the management of viral hepatitis.

Human Physiology, Biochemistry and Basic Medicine is a unique perspective that draws together human biology, physiology, biochemistry, nutrition, and cell biology in one comprehensive volume. In this way, it is uniquely qualified to address the needs of the emerging field of humanology, a holistic approach to understanding the biology of humans and how they are distinguished from other animals. Coverage starts with human anatomy and physiology and the details of the workings of all parts of the male and female body. Next, coverage of human biochemistry and how sugars, fats, and amino acids are made and digested is discussed, as is human basic medicine, covering the science of diseases and human evolution and pseudo-evolution. The book concludes with biology of basic human nutrition, diseases, and treatments, and contains broad coverage that will give the reader an understanding of the entire human picture. Covers the physiology, anatomy, nutrition, biochemistry and cell biology of humans, showing how they are distinguished from other animals Includes medical literature and internet references, example test questions, and a list of pertinent words at the end of each chapter Provides unique perspective into all aspects of what makes up and controls humans

General practitioners (GPs) and other members of the Primary Health Care Team (PHCT) play a crucial role in the provision of health care for children. At least 25% of GP consultations are with children, and many of the problems encountered are specific to this population group. However, children do not represent a homogeneous population and several ages of childhood are recognised, each with its unique set of illnesses and problems: the neonate, infant, pre-school child, school age child and the adolescent. Furthermore, both the childhood population and their illnesses change with time; new illnesses such as HIV have appeared and others, not seen for many years (such as rickets, tuberculosis and congenital rubella syndrome) have returned. Thus a comprehensive knowledge of the varied aspects of child health is needed; recognition of the acutely ill child, developmental surveillance, immunisation, treatment of chronic illness, and psycho-social issues. GPs are also increasingly involved in influencing configuration and the commissioning of services at a local level. This textbook provides practical guidance for GPs, GP registrars, practice nurses and health visitors dealing with child health in the 21st century. It undertakes a focused, problem-orientated approach based on the more common childhood problems encountered by GPs. Each chapter includes the essential background theory, but the emphasis is on making the clinical approach relevant and sensitive to primary care. Solutions to clinical scenarios are provided, based upon current, best available evidence. Site and system specific chapters are combined with sections looking at wider issues such as ethics and law, multicultural issues, and immunisation.

Practical Applications in Sports Nutrition, Third Edition provides students and practitioners with the latest sports nutrition information and dietary practices so they can assist athletes and fitness enthusiasts in achieving their personal performance goals. This text not only provides the most current sports nutrition guidelines and research but also includes the tools and guidance necessary to most appropriately apply the information in the "real world." It demonstrates effective ways to communicate sports nutrition messages to athletes and how to motivate individuals to make permanent behavior change. Early chapters provide an introduction to sports nutrition and give a thorough explanation of macronutrients, micronutrients, and water and their relation to athletic performance. Later chapters focus on the practical and applied aspects of sports nutrition including behavior change through consultations and weight management. Chapter 15 targets the unique nutrition requirements of special populations such as athletes who are pregnant, vegetarian, or have chronic diseases. The text concludes with a chapter dedicated to helping readers discover the pathway to becoming a sports dietitian through education and experience.
