In this major theoretical statement, the author offers a new and provocative interpretation of the institutional transformations associated with modernity. We do not as yet, he argues, live in a post-modern world. Rather the distinctive characteristics of our major social institutions in the closing period of the twentieth century express the emergence of a period of 'high modernity', in which prior trends are radicalised rather than undermined. A post-modern social universe may eventually come into being, but this as yet lies 'on the other side' of the forms of social and cultural organization which currently dominate world history. In developing an account of the nature of modernity, Giddens concentrates upon analyzing the intersections between trust and risk, and security and danger, in the modern world. Both the trust mechanisms associated with modernity and the distinctive 'risk profile' it produces, he argues, are distinctively different from those characteristic of pre-modern social orders. This book build upon the author's previous theoretical writings, and will be of fundamental interest to anyone concerned with Giddens's overall project. However, the work covers issues which the author has not previously analyzed and extends the scope of his work into areas of pressing practical concern. This book will be essential reading for second year undergraduates and above in sociology, politics, philosophy, and cultural studies.

Because communication among health care professionals can mean the difference between patient life and death, clear and effective patient care documentation is as important as the delivery of care itself. The rehabilitation professional faces formidable documentation responsibilities. Patient care documentation created by the rehabilitation professional must be accurate, comprehensive, concise, objective, and timely. In an interdisciplinary health care environment, documentation must also be expeditiously communicated to other professionals on the health care team. Public policy responses to escalating medical costs and constrained access pose fundamental challenges to health care law. Profound medical advances also generate many ethical dilemmas. This authoritative discussion considers how law and ethics respond to these driving social, economic, and political forces of innovation, crisis and reform. Topics include health insurance reform, health care finance and delivery structures, treatment relationships, facility and insurance regulation, corporate and tax law, refusal of life support, organ donation, and reproductive technologies.

In recent times, the phrase 'personalised medicine' has become the symbol of medical progress and a label for better health care in the future. However, a controversial debate has developed around whether these promises of better, more personal and more cost-efficient medicine are realistic. This book brings together leading researchers from across Europe and North America, from both normative and empirical disciplines, who take a more critical view of the often encountered hype associated with personalised medicine. Partially drawing on a four year collaborative research project funded by the German Ministry for Education and Research, the book presents a multidisciplinary debate on the current state of research on the ethical, legal and social implications of personalised medicine. At a time when future health care is a topic of much discussion, this book provides valuable policy recommendations for the way forward. This study will be of interest to researchers from various disciplines including philosophy, bioethics, law and social sciences.

How does the market affect and redefine healthcare? The marketisation of Western healthcare systems has now proceeded well into its fourth decade. But the nature and meaning of the phenomenon has become increasingly opaque amidst changing discourses, policies and institutional structures. Moreover, ethics has become focussed on dealing with individual, clinical decisions and neglectful of the political economy which shapes healthcare. This interdisciplinary volume approaches marketisation by exploring the debates underlying the contemporary situation and by introducing reconstructive and reparative discourses. The first part explores contrary interpretations of 'marketisation' on a systemic level, with a view to organisational-ethical formation and the role of healthcare ethics. The second part presents the marketisation of healthcare at the level of policy-making, discusses the ethical ramifications of specific marketisation measures and considers the possibility of reconciling market forces with a covenantal understanding of healthcare. The final part examines healthcare workers' and ethicists' personal moral standing in a marketised healthcare system, with a view to preserving and enriching virtue, empathy and compassion. Fostering rich reflection on the moral implications of a marketised healthcare system, this book is suitable for health professionals and for academics and students interested in the health sciences, medical ethics and law, social and public policy, philosophy and theology.

The Fourth Edition of this bestselling, highly regarded book has been fully revised to incorporate changes in law and clinical guidance making a vital impact on patient management, encompassing: . The goal of this open access book is to develop an approach to clinical health care ethics that is more accessible to, and usable by, health professionals than the now-dominant approaches that focus, for example, on the application of ethical principles. The book elaborates the view that health professionals have the emotional and intellectual resources to discuss and address ethical issues in clinical health care without needing to rely on the expertise of bioethicists. The early chapters review the history of bioethics and explain how academics from outside health care came to dominate the field of health care ethics, both in professional schools and in clinical health care. The middle chapters elaborate a series of concepts, drawn from philosophy and the social sciences, that set the stage for developing a framework that builds upon the individual moral experience of health professionals, that explains the discontinuities between the demands of bioethics and the experience and perceptions of health professionals, and that enables the articulation of a full theory of clinical ethics with clinicians themselves as the foundation. Against that background, the first of three chapters on professional education presents a general framework for teaching clinical ethics; the second discusses how to integrate ethics into formal health care curricula; and the third addresses the opportunities for teaching available in clinical settings. The final chapter, "Empowering Clinicians", brings together the various dimensions of the argument and anticipates potential questions about the framework developed in earlier chapters.
