This bestseller has been updated to reflect new concepts and ideas. The assessment of mental health problems is vital to the successful planning and treatment for people suffering from them. This book provides a step-by-step guide of how to conduct this assessment, giving student nurses a humanistic perspective on the subject. New material in this second edition includes person-centered assessment and care planning, and culture and culturally-appropriate assessment and care planning.

Thoroughly written, extensively updated, and optimized for today's evolving Canadian healthcare environment, *Psychiatric & Mental Health Nursing for Canadian Practice, 5th Edition*, equips students with the fundamental knowledge and skills to effectively care for diverse populations in mental health nursing practice. This proven, approachable text instills a generalist-level mastery of mental health promotion, assessment, and interventions in adults, families, children, adolescents, and older adults, delivering Canadian students the preparation they need to excel on the NCLEX® exam and make a confident transition to clinical practice.

First manual on Clinical Procedures developed by the faculties of NINE-PGIMER Chandigarh, who are also the subject experts. The procedures

have been divided into the 6 major nursing subjects: Nursing Foundations, Medical Surgical Nursing, Mental Health Nursing, Obstetric and Gynecological Nursing, Pediatric Nursing and Community Health Nursing. The contents have been developed as per INC syllabus of undergraduate as well as postgraduate nursing and several new procedures have been added, making it the most comprehensive compendium available so far. The complete book has been developed keeping in mind the relevance of the content in the Indian context. The articulate way of writing strengthened by the use of simple language makes browsing through the book a delightful experience. All the procedures have been well illustrated with colored diagrams and real-time photographs, explaining the various steps of procedures. The procedures have been divided into Preprocedural, Intraprocedural and Postprocedural steps along with their rationale, emphasizing the sequence and importance of every step. All procedures are substantiated with Points to Remember and Special Considerations boxes to help the students identify and remember the various aspects that need to be taken care of while performing the procedures. Suggested Readings at the end of each procedure are given to aid the students with various reference works for future reference and enhancing their knowledge.

Psychiatric and Mental Health Nursing: Theory and practice was

conceived as a result of three major premises which, in the view of the editors, relate to the practice of psychiatric and mental health nursing. First, that high-quality psychiatric and mental health nursing can be practised only if it is underpinned by appropriate nursing theory. Secondly, that there exists a body of theory which can and should be applied to psychiatric and mental health nursing. Thirdly, that there is a need for a text which will assist teachers, students and clinicians to apply available nursing and borrowed theory to clinical practice. The general aim of this book is to introduce nursing students to a theory based approach to caring for people with psychiatric and mental health problems. The phrase psychiatric and mental health problems indicates that the text relates to clients with a psychiatric diagnosis, and also to those who have mental health problems but who do not necessarily have such a diagnosis. The client group to which the material in this text applies will include those who are, or have been, hospitalized and those in the community who have not been, and may never be, hospitalized. The intended readership is all students of psychiatric and mental health nursing issues, for example basic and post-basic nurses, and their teachers.

consistently organized with sections on the clinical picture, epidemiology, comorbidity, etiology, and application of the nursing process. Clinical chapters follow the nursing process, providing you with consistent guidelines for comprehensive assessment and intervention. Vignettes prepare you for real-world practice with personal, descriptive characterizations of patients with specific psychiatric disorders. Coverage of psychopharmacology in clinical chapters familiarizes you with specific drug treatment options, including the most commonly used drugs and important nursing considerations for their use. Assessment Guidelines boxes list essential guidelines for comprehensive patient assessment. Case Studies with Nursing Care Plans present individualized histories of patients with specific psychiatric disorders and include interventions with rationales and evaluation statements for each patient goal. A separate chapter on cultural implications, as well as Considering Culture boxes throughout the text, provides essential information on culture, worldviews, and techniques for providing culturally competent care. Coverage of treatment and recovery in the community addresses the need for successful ongoing psychiatric mental health nursing care in the community setting. A chapter on end-of-life care examines the psychological impact of terminal illness and death on patients, families, and nurses. New content on integrative care -this content

will cover patient centered medical homes, integrated care clinics and the role of advanced practice nurses in psychiatric care *Relevant QSEN competencies will be introduced in Chapter One, Mental Health and Mental Illness, and will be integrated throughout the text. A common sense, and how it applies to practice, approach will be used to highlight the competencies relevant to psych nursing care such as safety, communication, evidence based practice and others. * Include more content and discussion on genetics as the basis for psychological disorders. Will consider a new chapter or add this content to Chapter 3, Biological Basis for Understanding Psychotropic Drugs *Enhance content on the health promotion and prevention of illness in pediatric patients *The author has secured a knowledgeable, expert contributor to develop meaningful, concept maps for the clinical chapters and we will work to revise our current concept map creator on Evolve to be more state of the art *Integrate the DSM-V to the extent that we know prior to publication to make our text as current as possible. DSM-V content is to be released in Spring 2013 while our text is in production. All relevant and updated NANDA content will be included as well * The number of photos and illustrations will be increased to add to the appeal of the text (per reviewer comments). One example is to include normal brain images in the clinical chapters that are also accompanied by an image demonstrating clinical pathology (eg:

schizophrenia)

"Psychiatric Mental Health Nursing emphasizes interpersonal relations as the foundation for nursing practice and the cornerstone for relationship-based care. Starting out with an important historical overview of the profession, the student is introduced to the rich history of psychiatric mental health nursing. This text then guides the nursing student through the essential phases of self-discovery while integrating interpersonal nursing theory concepts into practice with various populations"--

"An additional assumption was that the processes for theory development were new to nursing and hence, nurses in graduate programs learned strategies for advancing knowledge from other disciplines. This assumption was debunked with the knowledge that nurses were always engaged in knowledge development, driven by their experiences in clinical practice. Because of these assumptions, most of the early writing about theory development was about outlining

strategies that should be used, rather than strategies that have already been used in the discipline to develop theories. Theorists themselves did not uncover or adequately discuss ways by which they developed their theories, therefore the tendency was to describe processes that were based on theories developed in other disciplines, mainly the physical and social sciences. And an implicit assumption was made that there should be a single strategy for theory development, some claiming to begin the process from practice, and others believing it should be driven by research"--Provided by publisher.
