Genetics and Life Insurance

*The extensively updated third edition of Pediatric Epilepsy: Diagnosis and Therapy continues to be the definitive volume on the diagnosis, treatment, classification, and management of the childhood epilepsies. Written by nearly 100 international leaders in the field, this new edition progresses logically with major sections on the basic mechanisms of the disease, classification, epidemiology, etiology, diagnosis, and*

*age-related syndromes of epilepsy. The core of the new third edition is its completely updated section on antiepileptic drugs, including an in-depth discussion of dosage considerations, drug toxicity, teratogenicity, and drug interactions, with recommendations for optimal combinations when multiple drug therapy is required. Features unique to the third edition include: Expanded section on the basic science and mechanism of epilepsy Completely updated drug chapters, including newly released drugs and those in development Expanded chapters on vagus nerve stimulation and surgical treatment Expanded section on co-morbidities The third edition includes 21 new chapters, including discussions of: epileptic channelopathies; epileptogenic cerebral cortical malformation; epilepsy genes; etiologies and workup; evidence-based medicine issues related to drug selection; Levetiracetam; Sulthiame; Pregabalin; herbal medications; basic and advanced imaging; immunotherapy issues; vagus nerve stimulation therapy; cognitive and psychiatric co-morbidities and educational placement; and psychosocial aspects of epilepsy.*

*Experts discuss the economic, legal, and social issues surrounding the use of genetic testing in determining eligibility for life insurance. Insurance companies routinely use an individual's medical history and family medical history in determining eligibility for life insurance; this is part of the process of medical underwriting. Insurers have also long used genetic information, often derived from family history, in*

*underwriting. But rapid advances in gene identification and genetic testing are changing the way we look at genetic information. Should the results of genetic testing (which might identify a predisposition toward disease not related to medical history) be available to life insurance medical underwriters? Few if any life insurers currently require genetic testing, but there are no laws or regulations prohibiting its use. Genetics and Life Insurance examines the complex economic, legal, and social issues surrounding the use of genetic information in life insurance underwriting. The contributors are legal scholars, representatives of the life insurance industry (including an actuary and an insurance physician), a geneticist, a genetic counselor, a philosopher, and a consumer advocate. They explore all aspects of an issue that has only recently drawn the attention of policymakers and the public. The book opens with a report on the results of a public opinion poll on genetics and life insurance. Succeeding chapters present the insurer perspective, a discussion of the economics of risk selection in life insurance, background information on the process of underwriting, a scientific analysis of genetic risks and mortality rates, a philosophical discussion of fairness and genetic underwriting, the viewpoints of consumers and genetics counselors, a comparison of different international policy approaches to the issue, and a legal analysis of antitrust implications when insurers collaborate in setting standards for medical underwriting. In the final chapter the editor addresses various policy options, examining the pros and cons of*

each one and assessing their political feasibility. Written specifically for athletic trainers, the updated second edition of *Clinical Pathology for Athletic Trainers: Recognizing Systemic Disease* emphasizes practical knowledge; development of clinical skills, including evaluation and treatment; and development of clinical decision-making abilities. Inside *Clinical Pathology for Athletic Trainers, Second Edition*, you will find an expanded discussion of the pathophysiology associated with general medical conditions, as well as case studies which facilitate the student's ability to formulate a differential diagnosis and make clinical decisions. Dr. Daniel P. O'Connor and Dr. A. Louise Fincher have incorporated all of the didactic and psychomotor competencies listed within the *General Medical Conditions and Pathology of Injuries and Illness* domains from the Fourth Edition of the NATA Educational Competencies into this unique text. Competencies that are addressed throughout the text are conveniently listed at the beginning of each chapter in which they are referenced. Individual lab activities are included within some chapters to aid in the development of the psychomotor skills related to evaluating general medical illnesses. Instructors will enjoy new ancillary materials such as test bank questions and PowerPoint slides. What's New in the Second Edition: • New chapters on pharmacology; dermatology; and eyes, ears, nose, throat, and mouth • Integration of NATA Position Statements and Consensus Statements • Expanded discussion on the physical exam, including detailed instructions for evaluation

This book will provide you with the tools you need to prevent and notice early warning signs of mind control: What is brainwashing and mind control? How to determine if someone is using manipulation and mind control on you and recognizing the signs Manipulation and persuasion:*
