

Microeconomia Scelte Individuali E Benessere Sociale

A scientific study of the political and economic factors influencing democratic decision making

The book compiles research on Condorcet's Paradox over some two centuries. It begins with a historical overview of the discovery of Condorcet's Paradox in the 18th Century, reviews numerous studies conducted to find actual occurrences of the paradox, and compiles research that has been done to develop mathematical representations for the probability that the paradox will be observed. Combines all approaches that have been used to study this very interesting phenomenon.

Nobel-Prize-winning economist Paul Krugman argues that business leaders need to understand the differences between economic policy on the national and international scale and business strategy on the organizational scale. Economists deal with the closed system of a national economy, whereas executives live in the open-system world of business. Moreover, economists know that an economy must be run on the basis of general principles, but businesspeople are forever in search of the particular brilliant strategy. Krugman's article serves to elucidate the world of economics for businesspeople who are so close to it and yet are continually frustrated by what they see. Traditional Chinese edition of The Value of Nothing: How to Reshape Market Society and Redefine Democracy by raj Patel, the author of Stuffed and Starved: The Hidden Battle for the World Food System. The Value of Nothing is a profound analysis of the global economic crisis stemmed by the "value" set by the "market." The cost of goods made and the ensuing cost of ecological damage do not proportionally represent the "value" of goods we produce and consume. Patel is a fellow at The Institute for Food and Development Policy, a visiting scholar at UC Berkley and a social and environmental activist. In Chinese. Distributed by Tsai Fong Books, Inc.

Devono le leggi economiche dominare i rapporti sociali? Nell'ambito di questo dilemma, nella ricerca di un equilibrio, si muove il presente lavoro. Due sono i pilastri su cui esso si fonda: argomenti e temi giuridici da un lato, che, però, hanno anche un impatto economico, e, dall'altro, la pretesa di egemonia del dato economico su ogni altro valore. Pretesa molte volte ammantata di scientificità, che travolge i rapporti reciproci, influenza il caos delle stesse pronunce giudiziali e il caos normativo, rendendo incerto il destino delle persone. "Per aver paura dei magistrati non bisogna essere necessariamente colpevoli (ma anche con gli economisti non si scherza)" ironizza l'autore, e in questo importante saggio, per contenuti e dimensioni, con garbo e autorevolezza ci spiega chiaramente il perché. Francesco Felis è nato ad Albenga (SV) nel 1957. Vive a Genova dal 1967, dove si è laureato in Giurisprudenza con 110 e lode nel 1982. È notaio dal 1988. Autore di molteplici pubblicazioni, giuridiche e non, è intervenuto a diversi convegni giuridici e politici.

What motives underlie the ways humans interact socially? Are these the same for all societies? Are these part of our nature, or influenced by our environments? Over the last decade, research in

experimental economics has emphatically falsified the textbook representation of Homo economicus. Literally hundreds of experiments suggest that people care not only about their own material payoffs, but also about such things as fairness, equity and reciprocity. However, this research left fundamental questions unanswered: Are such social preferences stable components of human nature; or, are they modulated by economic, social and cultural environments? Until now, experimental research could not address this question because virtually all subjects had been university students, and while there are cultural differences among student populations throughout the world, these differences are small compared to the full range of human social and cultural environments. A vast amount of ethnographic and historical research suggests that people's motives are influenced by economic, social, and cultural environments, yet such methods can only yield circumstantial evidence about human motives. Combining ethnographic and experimental approaches to fill this gap, this book breaks new ground in reporting the results of a large cross-cultural study aimed at determining the sources of social (non-selfish) preferences that underlie the diversity of human sociality. The same experiments which provided evidence for social preferences among university students were performed in fifteen small-scale societies exhibiting a wide variety of social, economic and cultural conditions by experienced field researchers who had also done long-term ethnographic field work in these societies. The findings of these experiments demonstrated that no society in which experimental behaviour is consistent with the canonical model of self-interest. Indeed, results showed that the variation in behaviour is far greater than previously thought, and that the differences between societies in market integration and the importance of cooperation explain a substantial portion of this variation, which individual-level economic and demographic variables could not. Finally, the extent to which experimental play mirrors patterns of interaction found in everyday life is traced. The book starts with a succinct but substantive introduction to the use of game theory as an analytical tool and its use in the social sciences for the rigorous testing of hypotheses about fundamental aspects of social behaviour outside artificially constructed laboratories. The results of the fifteen case studies are summarized in a suggestive chapter about the scope of the project.

Curiosando nelle filosofie orientali, approfondendo la nostra radice cristiana e lavorando con tante persone del mondo aziendale come formatore, ho pensato di dare una risposta ad uno dei temi più importanti della nostra evoluzione di oggi:

l'autorganizzazione. (Giuseppe Florio)

Il testo si rivolge agli operatori del settore edilizio, immobiliare e territoriale con riguardo ai professionisti architetti, ingegneri, geometri, agronomi e periti edili ai quali è spesso richiesta una competenza economico-estimativa non solo in appoggio alle usuali attività professionali (si pensi ad esempio alla redazione di un computo metrico estimativo di un progetto) ma anche finalizzata ad una autonoma attività professionale che si potrebbe definire dell' «estimatore». Il volume è inoltre pensato per gli studenti delle Facoltà di Ingegneria (civile ed edile) e di Architettura poiché, anche in assenza di specifiche conoscenze «preliminari», lo stesso fornisce i fondamenti necessari all'apprendimento dell' «estimo civile urbano» grazie ad un approccio lineare che, con l'apporto di numerosi esempi, parte dalle basi della teoria dell'estimo per svilupparne e approfondire i contenuti con un piglio didattico e pratico.
