This book constitutes the joint refereed proceedings of the 15th International Conference on Next Generation Wired/Wireless Advanced Networks and Systems, NEW2AN 2015, and the 8th Conference on Internet of Things and Smart Spaces, ruSMART 2015, held in St. Petersburg, Russia, in August 2015. The 74 revised full papers were carefully reviewed and selected from numerous submissions. The 15 papers selected for ruSMART are organized in topical sections on IoT infrastructure, IoT platforms, smart spaces and IoT cases, and smart services and solutions. The 59 papers from NEW2AN deal with the following topics: streaming, video, and TCP applications, mobile "ad hoc" networks, security, and clouds, sensor networks and IoT, cellular systems, novel systems and techniques, business and services, signals and circuits, optical and satellite systems, and advanced materials and their properties.

Visual Basic 2008 Black Book Is The Most Comprehensive Book That You Will Find On Visual Baisc.Net. It Contains Useful Material On All The Concepts Of Visual Basic 2008, And At The Same Time, Teaches You How To Implement These Concepts Programmatically By Providing Appropriate Examples Along-With Detailed Explanations. This Edition Of The Book Particularly Deals With Some New And Advanced Topics: Such As Wpf, Wcf, Wf, Asp.Net, Ajax, Silverlight, And Linq. World Guide to Special Libraries

This compilation probably looks like one of the craziest things a human being could spend his or her time on. Yet nobody would wonder at someone taking a short walk every day - after twenty five years that person would have covered a surprisingly long distance. This is exactly the story behind this list, which appeared first as a few pages within the directory StarGuides (or whatever name it had at that time) and as a distinct sister publication since 1990. The idea behind this dictionary is to offer astronomers and related space scientists practical assistance in decoding the numerous abbreviations, acronyms, contractions and symbols which they might encounter in all aspects of the vast range of their professional activities, including traveling. Perhaps it is a bit paradoxical, but if scientists quickly grasp the meaning of an acronym solely in their own specific discipline, they will probably encounter more difficulties

when dealing with adjacent fields. It is for this purpose that this dictionary might be most often used. Scientists might also refer to this compilation in order to avoid identifying a project by an acronym which already has too many meanings or confused definitions. This book provides a balanced critique of a range of international sustainability certification schemes across nine agricultural and natural resource industries. Certification schemes set standards through intramarket private and multi-stakeholder mechanisms, and while third-party verification is often compulsory, certification schemes are regulated voluntarily rather than legislatively. This volume examines the intricacies of certification schemes and the issues they seek to address and provides the context within which each scheme operates. While a distinction between sustainability certifications and extra-markets or intrabusiness codes of conducts is made, the book also demonstrates how both are often working towards similar sustainability objectives. Each chapter highlights a different sector, including animal welfare, biodiversity, biofuels, coffee, fisheries, flowers, forest management and mining, with the contributions offering interdisciplinary perspectives and utilising a wide range of methodologies. The realities, achievements and challenges faced by varying certification schemes are discussed, identifying common outcomes and findings and concluding with recommendations for future practice and research. The book is aimed at advanced students, researchers and professionals in agribusiness, natural resource economics, sustainability assessment and corporate social responsibility.

Information Systems for Sustainable Development provides a survey on approaches to information systems supporting sustainable development in the private or public sector. It also documents and encourages the first steps of environmental information processing towards this more comprehensive goal.

FROM PATENT TO PROFIT Patents and patent strategies are increasingly pertinent to the success of

information age businesses, from affecting valuations to gaining tax advantages to increasing the starting price per share when taking a company public. Patent Strategy illustrates the impact patents can have on technology-driven businesses' tactical and strategic efforts. Here is step-by-step guidance to the patent process, the laws, and basic strategies—from a business-goal perspective—so that middle and upper-level managers can recognize the significance of patents in relation to a particular business and can incorporate proper patent management efforts into their business framework. In addition, this book serves as an invaluable reference for management and executives when making patent-related decisions such as whether a patent infringement study must be performed; whether the budget for patent matters should be increased or decreased; whether attempts should be made to license certain patent technology; and whether the firm should sue for patent infringement. Case studies throughout the book give you a specific business context within which to consider the concepts introduced. Statistics are presented to assist you in assessing various issues, planning patent strategies, and implementing patent management programs

Most people love cats. They're fluffy, playful, and can be a joy to have as a companion. However, they can also be huge assholes. So what can you do? How do you deal with a roommate who always seems to be plotting to kill you? While we all love sharing adorable photos of kittens, these frisky felines are known more for marching to the beat of their own drum than abiding by the rules. From running around your home at two in the morning, knocking everything off your shelves, or taking up most of your bed, these furry critters can be immensely selfish and disrespectful to those who give them endless love and affection. Why Cats Are Assholes is up for such a challenge. From studying their history all the way back to ancient Egypt, comedian Liz Miele—the daughter of veterinarians—digests the cat psyche to try and understand why they do the things they do, and how we, as their loyal servants, can handle domestic bliss with them around. With the help of her cat Pasta, Miele

breaks down the common behaviors of cats in an attempt to try and better understand their plan of attack (if there is one), as well as what we can do to better prepare ourselves. Whether you have one, two, or twelve fur babies, Why Cats Are Assholes is the ultimate guide to better understanding your pet's behavior while taking back your home from these domesticated terrorists.

The free book "Fundamentals of Computer Programming with C#" is a comprehensive computer programming tutorial that teaches programming, logical thinking, data structures and algorithms, problem solving and high quality code with lots of examples in C#. It starts with the first steps in programming and software development like variables, data types, conditional statements, loops and arrays and continues with other basic topics like methods, numeral systems, strings and string processing, exceptions, classes and objects. After the basics this fundamental programming book enters into more advanced programming topics like recursion, data structures (lists, trees, hash-tables and graphs), high-quality code, unit testing and refactoring, object-oriented principles (inheritance, abstraction, encapsulation and polymorphism) and their implementation the C# language. It also covers fundamental topics that each good developer should know like algorithm design, complexity of algorithms and problem solving. The book uses C# language and Visual Studio to illustrate the programming concepts and explains some C# / .NET specific technologies like lambda expressions, extension methods and LINQ. The book is written by a team of developers lead by Svetlin Nakov who has 20+ years practical software development experience. It teaches the major programming concepts and way of thinking needed to become a good software engineer and the C# language in the meantime. It is a great start for anyone who wants to become a skillful software engineer. The books does not teach technologies like databases, mobile and web development, but shows the true way to master the basics of programming regardless of the languages, technologies and tools. It is good for beginners and intermediate developers who want to put a solid base for a successful career in the software engineering industry. The book is accompanied by free video lessons, presentation slides and mind maps, as well as hundreds of exercises and live examples. Visual Basic 2008 Programming Black Book, Platinum Edition (With Cd)

In a series of provocative conversations with Skeptic magazine's senior editor Frank Miele, renowned University of California-Berkeley psychologist Arthur R. Jensen details the evolution of his thoughts on the nature of intelligence, tracing an intellectual odyssey that leads from the programs of the Great Society

to the Bell Curve Wars and beyond. Miele cross-examines Jensen's views on general intelligence (the g factor), racial differences in IQ, cultural bias in IQ tests, and whether differences in IQ are due primarily to heredity or to remediable factors such as poverty and discrimination. With characteristic frankness, Jensen also presents his view of the proper role of scientific facts in establishing public policy, such as Affirmative Action. 'Jensenism' the assertion that heredity plays an undeniably greater role than environmental factors in racial (and other) IQ differences, has entered the dictionary and also made Jensen a bitterly controversial figure. Nevertheless, *Intelligence, Race, and Genetics* carefully underscores the dedicated lifetime of scrupulously scientific research that supports Jensen's conclusions.

Arguing that race is a biologically significant difference, the authors challenge the weight of academic opinion on the subject and suggest honesty rather than fear-mongering in light of growing evidence that the various races are significantly different. 20,000 first printing.

Imagine a research company capable of manipulating and combining the genetic structure of any animal. Now imagine that it's under the control of a maniacal genius who hates all super-heroes and desires to wipe them from the face of the Earth. Welcome to the Matthews GenTech files: a collection of custom-made creatures (complete with both Tri-Stat and d20 System game statistics) designed to take down Empire City's beloved super-heroes.

The Environmental Design Pocketbook 2nd ed places the information you need for sustainable, low energy

building design at your fingertips. Packed with diagrams, tools and tips, it cuts through the complex mass of technical data and legislation that faces the designer, and distils all the key guidance into a single reference that is quick, easy to use and points to the facts, figures and performance data that are most important. This 2nd edition is now fully up-to-date with the latest Building Regulations Part L and F legislation (England and Wales), RIBA Plan of Work 2013, new information on the Green Deal and Zero Carbon and contains revised references and further reading sections throughout. Whether used in the classroom, office or on-site, the book guides the designer through the entire process; from the fundamentals to the building details. From future-proofing for a changing climate to rainwater harvesting, retrofit, and zero-carbon technologies - the Pocketbook has got it covered.

Progressive Supranuclear Palsy: Diagnosis, Pathology, and Therapy

An American Astronautical Society Publication

With about 200,000 entries, StarBriefs Plus represents the most comprehensive and accurately validated collection of abbreviations, acronyms, contractions and symbols within astronomy, related space sciences and other related fields. As such, this invaluable reference source (and its companion volume, StarGuides Plus) should be on the reference shelf of every library, organization or individual with any interest in these areas. Besides astronomy and associated space sciences, related fields such as aeronautics, aeronomy, astronautics, atmospheric sciences, chemistry, communications, computer sciences, data processing, education, electronics, engineering, energetics, environment, geodesy, geophysics, information handling, management,

mathematics, meteorology, optics, physics, remote sensing, and so on, are also covered when justified. Terms in common use and/or of general interest have also been included where appropriate.

When Steele, Richardson and Olszewski described Progressive Supranuclear Palsy in Archives of Neurology in 1964, it was thought to be a rare disease. Recent pathological studies of large numbers of patients diagnosed as having Parkinson's disease in life have highlighted the fact that at least one in ten of such cases have some other condition. Progressive Supranuclear Palsy is one of the commonest alternative diagnoses. This book is therefore a timely review of present understanding of Progressive Supranuclear Palsy. Much has been learnt about this sporadic illness of middle and late life although its cause remains unknown, and its treatment continues to be difficult. The Editors have selected a team of authors who review the clinical aspects, neuro-imaging findings, neuropathology, neurochemistry, epidemiology, and therapy of Progressive Supranuclear Palsy. All are to be congratulated on producing an excellent and detailed picture of contemporary knowledge of the condition. Anyone interested in Progressive Supranuclear Palsy cannot do better than to start by reading this book. It is to be hoped that it will prompt further investigation to establish its cause and cure. C. D. MARSDEN, London Preface Progressive Supranuclear Palsy (PSP) is a neurodegenerative disorder characterized clinically by the appearance of a supranuclear gaze palsy and extra pyramidal features which include bradykinesia and axial dystonia. Postural instability and falls and frontal-type behavioural and cognitive disturbances complete the clinical picture of this progressive disorder.
