with information as individuals, governments, and organizations. We live and work predominantly online resulting in an enormous amount of digital data. The way that information is used is constantly changing with individuals, governments, and corporations all involved in collecting, storing, using, disclosing, and transferring information online. The growth in artificial intelligence and its effects on data will impact all individuals. It is imperative that a greater understanding of these new advances is gained, in particular, the legal implications they have for society. The idea that sugar, plantations, slavery, and capitalism were all present at the birth of the Atlantic world has long dominated scholarly thinking. In nine original essays by a multinational group of top scholars, *Tropical Babylons* re-evaluates this so-called "sugar revolution." The most comprehensive comparative study to date of early Atlantic sugar economies, this collection presents a revisionist examination of the origins of society and economy in the Atlantic world. Focusing on areas colonized by Spain and Portugal (before the emergence of the Caribbean sugar colonies of England, France, and Holland), these essays show that despite reliance on common knowledge and technology, there were considerable variations in the way sugar was produced.
