*"This book connects knowledge management theory to knowledge management practice, allowing the empirical research presented to resolve challenges. It provides a better understanding of the benefits and limitations of various socio-technical knowledge management initiatives, especially in the realm of social-oriented knowledge culture, communities, initiatives and rewards, measurement, technology-oriented knowledge repositories, modeling, rating, alerting, and discovery systems"--Provided by publisher.*

*This book examines the integration of major trade unions from the six biggest countries of EU's Eastern enlargement into EU governance structures. Based on extensive empirical research, including more than 150 in-depth interviews, statistical data collection, document research, and eight detailed case studies, the contributions describe the activities and perceptions of the trade unions under investigation and the different levels of engagement, including European umbrella organizations, interregional cooperation, and European Works Councils. The book thus contributes to political science research on interest representation and Europeanization as well as sociological research on labor relations.*

*Qualitative research has become a legitimate approach within the information systems community, but researchers have traditionally drawn upon material from the social sciences given the absence of a single source relevant to them. Qualitative Research in Information Systems: A Reader represents just such a volume and is both timely and relevant. Information systems and qualitative research articles are now widely used for teaching on many upper level courses in information systems, and there is demand for a definitive collection of these readings as a basic reader and teaching text. This book expertly brings together the seminal works in the field, along with editorial introductions to assist the reader in understanding the essential principles of qualitative research. The book is organised according to the following thematic sections: · Part I: Overview of Qualitative Research · Part II: Philosophical Perspectives · Part III: Qualitative Research Methods · Part IV: Modes of Analyzing and Interpreting Qualitative Data Qualitative Research in Information Systems: A Reader should become the benchmark reference point for students and researchers in information systems, management science and others involved in information technology needing to learn about qualitative research.*

*This book constitutes the refereed proceedings of the 8th International Conference on Design Science Research in Information Systems and Technology, DESRIST 2013, held in Helsinki, Finland, in June 2013. The 24 full papers, 8 research-in-progress papers, 12 short papers, and 8 poster abstracts were carefully reviewed and selected from 93 submissions. **MISperformance: essays in shifting perspectives** is a collection of essays that address a spectrum of cultural, organizational, technological, ecological, political and daily performances by focusing on the causes and consequences of a misfire, misconception, misrecognition, misnaming, misfitting etc. Aspects and impacts of MISperformance that are susceptible to provoking disturbances, distortions, alternations, abortions, if not disasters within diverse spheres of private and social life, including aesthetic and political practices, are investigated in the light of their potentially both regressive, even tragic outcome, and resistant, even transgressive efficacy, as also the absence or abandonment of any reason in or for performance. Philosophical paradigms, theoretical frameworks, and methodologies make up the answering and problem solving systems that define current research approaches. While there are multiple research method books, the subject lacks an update and integrated source of reference for graduate courses. Research Methodologies, Innovations and Philosophies in Software Systems Engineering and Information Systems aims to advance scientific knowledge on research approaches used in systems engineering, software engineering, and information systems and to update and integrate disperse and valuable knowledge on research approaches. This aims to be a collection of knowledge for PhD students, research-oriented faculty, and instructors of graduate courses. It is widely recognised that the knowledge of information systems is essential in today's business organisations to survive and prosper. This book in its Second Edition, discusses all the major areas in information systems. It includes issues in the design, development and application of organisation-wide information systems and their effect on business and organisations. The issues discussed in the book supports the management of an enterprise in its planning, operation and control functions. **SALIENT FEATURES OF THE BOOK** • Balanced treatment of both the technical and organisational issues involved • Wide range of topics including databases, decision support systems, expert systems and system analysis • Contemporary examples from the Indian industry Though the main structure of the Second Edition remains the same, the chapters have been updated and revised as per the recent developments in the field of information technology. **NEW TO THIS EDITION** • Several 'Case-studies' have been incorporated at the end of each chapter. • New references have been included in the text to support the added text. • Learning objectives have been given at the beginning of each chapter. • The text is presented in an attractive manner as numerous new figures and pictures have been added.

Management Information Systems covers the basic concepts of management and the various interlinked concepts of information technology that are generally considered essential for prudent and reasonable business decisions. The book offers the most effective coverage in terms of content and case studies. It matches the syllabi of all major Indian universities and technical institutions.

The Sixth Edition of Robert K. Yin's bestseller provides a complete portal to the world of case study research. Offering comprehensive coverage of the design and use of the case study method in addition to an integration of applications, the book gives readers access to exemplary case studies drawn from a wide variety of academic and applied fields. The integration of applications will enable users to see more directly how concrete case studies can implement the principles of case study research methods.

This book comprises a set of papers selected from those presented at the fifth « International Conference on Enterprise Information Systems », (ICEIS'2003) held in Angers, France, from 23 to 26 April 2003. The conference was organised by École Supérieure d'Électronique de l'Ouest (ESEO) of Angers, France and the Escola Superior de Tecnologia de Setúbal, Portugal. Since its first edition in 1999, ICEIS focuses on real world applications and aims at bringing together researchers, engineers and practitioners interested in the advances and business applications of information systems. As in previous years, ICEIS'2003 held four simultaneous tracks covering different aspects of enterprise computing: Databases and Information Systems Integration, Artificial Intelligence and Decision Support Systems, Information Systems Analysis and Specification and Software Agents and Internet Computing. Although ICEIS'2003 received 546 paper submissions from over 50 countries, only 80 were accepted as full papers and presented in 30-minutes oral presentations. With an acceptance rate of 15%, these numbers demonstrate the intention of preserving a high quality forum for future editions of this conference. From the articles accepted as long papers for the conference, only 32 were selected for inclusion in this book. Additional keynote lectures, tutorials and industrial sessions were also held during ICEIS'2003, and, for the first time this year, the 1st Doctoral Consortium on Enterprise Information Systems gave PhD students an opportunity to present their work to an international audience of experts in the field of information systems.

Introduction to Health Care Management is a concise, reader-friendly, introductory healthcare management book that covers a wide variety of healthcare settings, from hospitals to nursing homes and clinics. Filled with examples to engage the reader's imagination, the important issues in healthcare management, such as ethics, cost management, strategic planning and marketing, information technology, and human resources, are all thoroughly covered. Guidelines and rubrics along with numerous case studies make this text both student-friendly and teacher friendly. It is the perfect resource for students of healthcare management, nursing, allied health, business administration, pharmacy, occupational therapy, public administration, and public health. Drs. Buchbinder and Shanks have done a masterful job in selecting topics and authors and putting them together in a meaningful and coherent manner. Each chapter of the book is designed to give the student the core content that must become part of the repertoire of each and every healthcare manager, whether entry level or senior executive. Each of the chapters and accompanying cases serve to bring to life what it means to be a truly competent healthcare manager. Leonard H. Friedman, PhD, MPA, MPH, Professor, Dept of Health Services Management and Leadership, and Director of the Master of Health Services Administration program, George Washington University, School of Public Health and Health Services I am very happy with Health Care Management and will be adopting it for a new course that I will be teaching. This is probably the best management text I have seen so far. I was thrilled to receive it. Sally K. Fauchald, PhD, RN, Assistant Professor of Nursing, The College of St. Scholastica A solid text that covers a wide range of management topics. Michael H. Sullivan, Director HCA Program, Methodist University, Fayetteville, North Carolina"

The book is a collection of cases for management students and other interested readers. It includes both long and short cases. The focus of the first three cases is project management including the one about managing risk. They are semi-solved but the case questions try to explore issues raised during the course of design or implementation of a given solution. The next one deals with the management of change. The fifth one is concerned with looming profitability. The goal of the rest of the cases is management information systems (MIS). Consequently, e-commerce and knowledge management are talked about. Some are discussing generic business issues. Thus, a range of subjects makes the collection useful for a variety of audience.

The text is a collection of original and republished papers providing a significant survey on the use of SPI and software process assessment (SPA) as practiced by companies such as Lockheed Martin, Siemens, and Hewlett Packard. Among the important features of the book are chapters on software process evaluation, how to best perform SPI, ISO 9000 and TickIT-an alternative approach to SPA, as well as the latest information on the CMM integration project. The text also provides vivid descriptions on the most important international and national standards for SPI, in particular ISO 9001, ISO 9000-3, ISO.

Introduction The International Federation for Information Processing (IFIP) is a non-profit umbrella organization for national societies working in the field of information processing. It was founded in 1960 under the auspices of UNESCO. It is organized into several technical committees. This book represents the proceedings of the 2008 conference of technical committee 8 (TC8), which covers the field of information systems. TC8 aims to promote and encourage the advancement of research and practice of concepts, methods, techniques and issues related to information systems in organisations. TC8 has established eight working groups covering the following areas: design and evaluation of information systems; the interaction of information systems and the organization; decision support systems; e-business information systems; multi-disciplinary research and practice; information systems in public administration; smart cards, technology, applications and methods; and enterprise information systems. Further details of the technical committee and its working groups can be found on our website (fip8.dsi.uminho.pt). This conference was part of IFIP's World Computer Congress in Milan, Italy which took place 7-10 September 2008. The occasion celebrated the 32nd anniversary of IFIP TC8. The call for papers invited researchers, educators, and practitioners to submit papers and panel proposals that advance concepts, methods, techniques, tools, issues, education, and practice of information systems in organizations. Thirty one submissions were received.

MISPERFORMANCE : essays in shifting perspectives

**The practices of participation and engagement are characterised by complexities and contradictions. All celebratory examples of uses of social media, e.g. in the Arab spring, the Occupy movement or in recent LGBTQ protests, are deeply rooted in human practices. Because of this connection, every case of mediated participation should be perceived as highly contextual and cannot be attributed to one (social) specific media logic, necessitating detailed empirical studies to investigate the different contexts of political and civic engagement. In this volume, the theoretical chapters discuss analytical frameworks that can enrich our understanding of current contexts and practices of mediated participation. The empirical studies explore the implications of the new digital conditions for the ways in which digitally mediated social interactions, practices and environments shape everyday participation, engagement or protest and their subjective as well societal meaning.**

**An incisive study showing how cultural ideas of merit in academic science produce unfair and unequal outcomes. In Misconceiving Merit, sociologists Mary Blair-Loy and Erin A. Cech uncover the cultural foundations of a paradox. On one hand, academic science, engineering, and math revere meritocracy, a system that recognizes and rewards those with the greatest talent and dedication. At the same time, women and some racial and sexual minorities remain underrepresented and often feel unwelcome and devalued in STEM. How can academic science, which so highly values meritocracy and objectivity, produce these unequal outcomes? Blair-Loy and Cech studied more than five hundred STEM professors at a top research university to reveal how unequal and unfair outcomes can emerge alongside commitments to objectivity and excellence. The authors find that academic STEM harbors dominant cultural beliefs that not only perpetuate the mistreatment of scientists from underrepresented groups but hinder innovation. Underrepresented groups are often seen as less fully embodying merit compared to equally productive white and Asian heterosexual men, and the negative consequences of this misjudgment persist regardless of professors' actual academic productivity. Misconceiving Merit is filled with insights for higher education administrators working toward greater equity as well as for scientists and engineers striving to change entrenched patterns of inequality in STEM.**

The complete guide for how to design and conduct theory-testing and other case studies! Case Study Methodology in Business Research sets out structures and guidelines that assist students and researchers from a wide range of disciplines to develop their case study research in a consistent and rigorous manner. It clarifies the differences between practice-oriented and theory-oriented research and, within the latter category, between theory-testing and theory-building. It describes in detail how to design and conduct different types of case study research, providing students and researchers with everything they need for their project. The main aims are to: \* present a broad spectrum of types of case study research (including practice-oriented case studies, theory-building case studies and theory-testing case studies) in one consistent methodological framework. \* emphasize and clearly illustrate that the case study is the preferred research strategy for testing deterministic propositions such as those expressing a necessary condition case by case and that the survey is the preferred research strategy for testing probabilistic propositions. \* stress the role of replication in all theory-testing research, irrespective of which research strategy is chosen for a specific test. \* give more weight to the importance of theory-testing relative to theory-building. Case Study Methodology in Business Research is a clear, concise and comprehensive text for case study methodology. Templates are supplied for case study protocol and how to report a case study. A modular textbook primarily aimed at serving research methodology courses for final year undergraduate students and graduate students in Business Administration and Management, which is also useful as a handbook for researchers. Written by Jan Dul, Professor of Technology and Human Factors, RSM Erasmus University, Rotterdam and Tony Hak, Associate professor of Research Methodology, RSM Erasmus University, Rotterdam, in collaboration with other authors from RSM Erasmus University. \* Provides students with everything needed to design and conduct a case study project \* Templates are supplied clearly demonstrating case study protocol and how to report a case study \* A highly accessible, concise and comprehensive text for Case Study methodology
