Both Science and Religion evolved sometimes in spectacular leaps of mind and faith. The strangest part of this evolution has been the discovery that at the deepest level of human cognition of Science or Religion, the quest has been and

In the eighteenth

knowledge of British scientific practice in a noncolonial context and of Chinese reactions to Western science in the eighteenth and nineteenth centuries. In addition to the culture of Victorian naturalists and Sinology, Fan

shows an admirable grasp of visual representation in science, Chinese taxonomic schemes, Chinese export art, British imperial scholarship, and journeys of exploration. His treatment of the China trade and descriptions of

I learned a great  
deal, and I strongly  
recommend this

on the experiences

time when it was  
gradually being  
opened up to

Fan makes at least  
two important  
contributions to  
history of science:  
He gives us an  
authoritative study

of British naturalists  
in China (as far as I  
know the only one  
of its kind), and he  
forces us to rethink  
some of our  
categories for doing

including how we  
conceive of the  
relationship  
between science  
and imperialism,

A Wrinkle in Time is the winner of the 1963 Newbery Medal. It was a dark and stormy night—Meg Murry, her small brother Charles Wallace, and her mother had come down to the kitchen for a midnight snack when they were upset by the arrival of a most disturbing stranger.

"Wild nights are my glory," the unearthly stranger told them. "I just got caught in a downdraft and blown off course. Let me sit down for a moment, and then I'll be on my way. Speaking of ways, by the way, there is such a thing as a tesseract." A tesseract (in case the reader
