One week is all we were supposed to share. One week as strangers. All the things you did differently irked me. I thought it meant we couldn't get along, that there was no chance we'd work out. But when it came time for me to leave, you know what I figured out? You were my echo. My call back. And damn it if I didn't find home in the end.

An examination of the pioneering Caribbean and Latin American artists who resided in New York prior to WWII and shaped the American avant-garde Between 1900 and 1942, New York City was the site of extraordinary creative exchange where artists could share ideas in a global context. The swiftly changing urban landscape before and between the World Wars inspired the erosion of artistic boundaries and fostered a new climate of modernist experimentation. Nexus New York focuses on key artists from the Caribbean and Latin America who entered into dynamic cultural and social dialogues with the American-based avant-garde and participated in the development of a new modern discourse. Featuring both celebrated and little-known figures of this period, including Carlos Enríquez, Alice Neel, Marius de Zayas, Francis Picabia, Joaquín Torres-García, José Clemente Orozco, Matta, and Robert Motherwell, contributing authors also discuss the specific environments in which they flourished, including the Art Students League, the Siqueiros Experimental Workshop, and the New School for Social Research. A fascinating look at 20th-century modernism, this book provides the first view of the

went through 37 years of hell to then experience the appearance of an Indian guide called White Arrow who changed her life completely. After ten years of being a Medium helping others, White Arrow asked her to send seven symbols he had given her, to the American Indians in Montana. The explanation of the symbols were to send her on a path that no man has ever taken or witnessed before; Montana, Egypt, Mexico, Amazon, Jerusalem and North Dakota. Over one hundred and fifty drawings that have been translated by experts gave proof that her guide had been here before as Jesus Christ. White Arrow has come with friends from other Galaxies to help him on his mission to save the dying Earth - to stop men destroying the very thing that we need to survive: The Rainforests of the Earth. Aliens, Moses, The Virgin Mary, Imhotep, Isis, Horus, Albert Einstein etc - all must be read and heard. This is a book that must be read by men and women everywhere. A warning at the end of the book that will leave us with fear if we do nothing. A book that will leave everyone wondering how this all came about.

The debt of modern chemistry to Antoine Lavoisier (1743-1794) is incalculable. With Lavoisier's discoveries of the compositions of air and water (he gave the world the term 'oxygen') and his analysis of the process of combustion, he was able to bury once and for all the then prevalent phlogiston doctrine. He also recognized chemical elements as the ultimate residues of chemical analysis and, with others, worked out the beginnings of the modern system of nomenclature. His premature death at the hands of a Revolutionary tribunal is undoubtedly one of the saddest losses in the history of science. Lavoisier's theories were promulgated widely by a work he published in 1789: *Traité élémentaire de Chimie*. The famous English translation by Robert Kerr was issued a year later. Incorporating the notions of the "new chemistry," the book carefully describes the experiments and reasoning which led Lavoisier to his conclusions, conclusions which were generally accepted by the scientific community almost immediately. It is not too much to claim that Lavoisier's *Traité* did for chemistry what

Newton's Principia did for physics, and that Lavoisier founded modern chemistry. Part One of the *Traité* covers the composition of the atmosphere and water, and related experiments, one of which (on vinous fermentation) permits Lavoisier to make the first explicit statement of the law of the conservation of matter in chemical change. The second part deals with the compounds of acids with various bases, giving extensive tables of compounds. Its most significant item, however, is the table of simple substances or elements – the first modern list of the chemical elements. The third section of the book reviews in minute detail the apparatus and instruments of chemistry and their uses. Some of these instruments, etc. are illustrated in the section of plates at the end. This new facsimile edition is enhanced by an introductory essay by Douglas McKie, University College London, one of the world's most eminent historians of science. Prof. McKie gives an excellent survey of historical developments in chemistry leading up to the *Traité*, Lavoisier's major contributions, his work in other fields, and offers a critical evaluation of the importance of this book and Lavoisier's role in the history of chemistry. A Guide to More Conscious Living

***Life is indeed a game that we all play to pass time; simply a series of days strung together, made up of how you planned or decided to spend the moments. Like any game how well it is played or whether life's circumstances are interpreted accurately, then used to the best advantage, makes losers and winners to varying degrees. Senseless insanity is alive and well within the world. The world is awash with unruly forces, that if not intent upon harming you do desire to become a destabilising force, either temporarily or over the long term. We are all participants in a charade, how life evolves and turns out all depend on how well the game is played. It is not wise or ideal to treat life like a game of chance, a random roll of the dice that can determine unpredictable outcomes. The cost of success is the careful application of well thought out concepts and ideas. Like any game preparation is critical; understanding the rules,***

***knowing how to manipulate the dynamics at play efficiently to ones own advantage, understanding the intricacies of the rules and how to capitalise upon or create opportunities, pursuing whatever circumstances are present to maximise whatever potential exists to the best advantage. The potential opportunities in life are only limited by the inability to firstly comprehend them and secondly to fully utilise personal abilities to maximise the potential that is available. Don't wait for special times to evolve, rather create them in accordance with your true desires to experience what you wish to make real. Much like any game, the game of life has things that can be obtained, or things that can be lost. How the game is played, the value of the stakes, the opposing factions all come to dictate an outcome, be that favourable or lacking any resemblance of being lucky. A life lived based upon any reliance on luck or fate being favourable is tempting only to the over optimistic, or those extremely lucky ones or who were fortunate in the past and believe that good fortune will continue in the future. While it takes resources to control the world, the control of your own specific world environment is really within your potential to achieve. How you choose to control your world, as well as to what extent your desires are put into action, determine whether your life will meet your wishes or not. The amount of thought and energy you exhort, the persistence of that effort, all comes to determine whether and to what degree what you want is what you actually get. In life you may win or loose at times, it's basically just like playing a game; the right mentality is chancing the wheel of life by trusting and ensuring you will win just the same.***
