While the design of adjustment policies in the latter part of the 1980s has generally shown greater attention to their impact on growth and social implications, this book argues that several orthodox adjustment policies are still incongruent with long-term development in Africa. It goes on to discuss a development strategy which could lead to a much awaited economic recovery and improvement in social conditions in Africa in the 1990s drawing its conclusions from a general theoretical discussion and national case-studies.

questions listed in the table of contents. A lead speaker provided an answer, and discussants had a chance to critique the main presentation and set forth their own views. Each session also included a policy person to deal with issues from an applied perspective. The lead papers, review papers, and rejoinders constitute the contents of this volume.

Interdisciplinary in scope, it deals with the central issue in a systematic way and attempts to present divergent points of view on each question. As such, it provides the reader with current information and a review of issues intended to provoke new ways of thinking about child care.

Building and expanding upon the prior edition of Essentials of Health Justice, the new second edition of this unparalleled text explores the historical, structural, and legal underpinnings of racial, ethnic, gender-based, and ableist inequities in health, and provides a framework for students to consider how and why health inequity is tied to the ways that laws are structured and enforced. Additionally, it offers analysis of potential solutions and posits how law may be used as a tool to remedy health injustice. Written for a wide, interdisciplinary audience of students and scholars in public health, medicine, and law, as well as other health professions, this accessible text discusses both the systems and policies that influence health and explores opportunities to advocate for legal and policy change by public health practitioners and policymakers, physicians, health care professionals, lawyers, and lay people.

First published in 1998, this volume represents the outcome of a seminar as part of the continuing efforts of the Convocation of the University of Dar es Salam to maintain a dialogue with the Government of Tanzania on its socio-economic problems. Its aim was to underscore

heightened public concern on the continued deterioration of social services in Tanzania following the onset of the economic crisis, to examine the effect of structural adjustment policies and measures on health, education, water, food, security, housing and social welfare services and to make specific recommendations on how to improve the delivery and sustainability of social services. This volume reproduces, as far as is practicable, the full proceedings of that important forum, whose issues remain relevant today. Recent reforms in the country, including privatization, graded user fees and decentralized management of social services by local communities have been substantially influenced by what the seminar recommended. While a section of society has welcomed these reforms as the only realistic way to achieve sustainability, reduce donor dependence, and prevent further deterioration of social services, there are still voices which object to the measures. Key questions raised in the book concern citizens' rights to social services, the regulatory role of government, democratic participation and partnerships between government, NGOs and private providers of social services. It will serve as a reference point for a fresh review of the social services crisis in the 1990's and the basis for devising more appropriate and sustainable strategies for the 21st Century.

The 'World Development Report 1990: Poverty' provided the foundation for the World Bank strategy to help achieve global poverty reduction. This report is a contribution to the strategy review process. It examines the implementation of the 1990 strategy, maps changes against assessment of Bank performance at both the country and the project level and assesses the relevance of key elements of the 1990 strategy in light of new data and shifts in the development assistance environment. The report concludes that the 1990 strategy remains relevant but needs to be combined with a more comprehensive approach. Lessons from experience confirm the importance of a holistic approach to reach the poor more effectively. This includes a focus on local level institutions and building on existing institutional frameworks wherever possible and on working across sectors for maximum impact. The 1990 strategy and the operational guidelines based on it have failed to generate a clear emphasis on measuring and monitoring results. A critical test of the Bank's evolving poverty strategy will be the design of a credible framework for measuring the results of the Bank's country assistance, and helping to build local capacity for monitoring the impact of poverty reduction programmes. The report is in English with the foreword and

the executive summary given in English, Spanish and French. This book examines the Incident Command System (ICS), the new presidential directive dealing with the National Incident Management Systems, and the new emergency management concept called the all-hazards approach - the idea that a community's emergency plan follows the same philosophies and actions no matter what the emergency situation - used by most communities, the states, and the federal government. This handbook also discusses how to manage volunteers and deal with pets in disaster situations and looks at what the rest of the world is doing with respect to emergency management.

The book, which is the outcome of an international conference held under the auspices of the University of Florence, aims at sketching out, through the contributions by distinguished scholars from various nationalities, the origins and characteristics of the system which has been imposed on Europe between the end of the Second World War and the mid-1950s, as well as at analysing the most important consequences of the events which, from the fall of the Berlin Wall to the 'end of the cold war', have radically transformed the European scene.

- Volume One: Economic Trends focuses on the schism between the wealthy and the poor that intensified in the 1980s as wages went up for highly educated persons but fell for those with less than a college degree. This gap was reflected geographically, as industries continued their migration from crumbling inner cities to booming edge cities, often leaving behind an impoverished minority population. Young male workers lost ground in the 1980s, but women made substantial strides, dramatically reducing the gender gap in earnings. The amount of family income devoted to housing rose over the decade, but while housing quality improved for wealthy, older Americans, it declined for younger, poorer

families. •Volume Two: Social Trends examines the striking changes in American families and the rapid shifts in our racial and ethnic composition. Americans are marrying much later and divorcing more often, and increasing numbers of unmarried women are giving birth. These shifts have placed a growing proportion of children at risk of poverty. In glaring contrast, the elderly were the only group to make gains in the 1980s, and are now healthier and more prosperous than ever before. The concentrated immigration of Asians and Latinos to a few states and cities created extraordinary pockets of diversity within the population. Throughout the 1990s, the nation will debate questions about the state of the nation and the policies that should be adopted to address changing conditions. Will continued technological change lead to even more economic polarization? Will education become an increasingly important factor in determining earnings potential? Did new immigrants stimulate the economy or take jobs away from American-born workers? Will we be able to support the rapidly growing population of older retirees? State of the Union will help us to answer these questions and better understand how well the nation is adapting to the pervasive social and economic transformations of our era. The second half provides 25 commentaries on changes influencing the development of regions from questions of industry, technology and employment to the impact of national policy and 1992, and the prospects and capacity for regional policy and development. For millennia, urban centers were pivots of power and trade that ruled and linked rural majorities. After 1950, explosive urbanization led to unprecedented urban majorities around the world. That transformation--inextricably tied to rising globalization--changed almost everything for nearly everybody: production, politics, and daily lives. In this book, seven eminent scholars look at the similar but nevertheless divergent courses taken by Mexico City, Rio de Janeiro, Buenos Aires, Montreal, Los Angeles, and Houston in the twentieth century, attending to the challenges of rapid growth, the gains and limits of popular politics, and the profound local effects of a swiftly modernizing, globalizing economy. By exploring the rise of these six cities across five nations, *New World Cities* investigates the complexities of power and prosperity, difficulty and desperation, while reckoning with the social, cultural, and ethnic dynamics that mark all metropolitan areas. Contributors: Michele Dagenais, Mark Healey, Martin V. Melosi, Bryan McCann, Joseph A. Pratt, George J. Sanchez, and John Tutino.
