Comprehensive, systematic, and balanced, Systems of Psychotherapy uses a wealth of clinical cases to help readers understand a wide variety of psychotherapies - including psychodynamic, existential, experiential, interpersonal, exposure, behavioral, cognitive, third wave, systemic, multicultural, and integrative. The ninth edition of this landmark text thoroughly analyzes 15 leading systems of psychotherapy and briefly surveys another 32, providing students and practitioners with a broad overview of the discipline. The book explores each system's theory of personality, theory of psychopathology, and resulting therapeutic process and therapy relationship. Through these explorations the authors clearly demonstrate how psychotherapy systems agree on the processes producing change while diverging on the elements in need of change. Additionally, the authors present cogent criticisms of each approach from cognitive-behavioral, psychoanalytic, humanistic, cultural, and integrative perspectives. This ninth edition features updated meta-analytic reviews of the effectiveness of each system, new sections on Lacanian analysis, mentalization therapy, and psychotherapy with gender nonconforming people, as well as new sections and updates throughout the text.

Written expressly for health care and the social services, this accessible book shows how motivational interviewing (MI) can transform conversations about change within an organization. Much has been written about the basic incompatibility of the dominant quantitative research model in psychotherapy and the qualitative preferences of the practitioner community providing psychotherapy. Researchers and clinicians are at odds over the most valuable type of knowledge needed: that emerging from quantitative, experimental research versus that from qualitative, case-based practice, respectively. Recently, a number of emerging research methods have attempted to bridge and integrate these two approaches. Case Studies within Psychotherapy Trials is one such effort and significantly furthers the synergy between them. The volume provides a comprehensive illustration of the "cases-within-trials" (CWT) model of research. Quantitative findings from four randomized clinical trials (RCT) are synthesized with qualitative and quantitative findings from systematic case studies of successful and unsuccessful clients representatively drawn from each RCT. The book opens with the history of dialectic and political controversy in psychotherapy research and recent initiatives to bridge the differing perspectives. The RCT and case study projects follow, each commented on by outside experts. In the final chapter the editors compare and contrast the separate projects and draw insightful, impactful conclusions. By bringing together quantitative, natural scientific perspectives on research and qualitative, interpretative understandings and strategies, the chapter authors demonstrate how practitioners can be meaningfully included in future psychotherapy research. This book will be of great interest to psychotherapy researchers and practitioners and those invested in research methods in the behavioral sciences more generally.

Motivational Interviewing (MI) is an evidence-based communication style that has applicability to diverse professions ranging from mental and physical healthcare to criminal justice. Professionals use MI to help patients/clients harness their own internal motivations for change and become active partners in developing plans for change. Using MI, a professional can guide patients/clients to make positive changes in life areas such as substance abuse, criminal activity, anxiety and mood problems, poor cardiovascular health, and more. Fundamentals of Motivational Interviewing provides a straightforward, common-language, and user-friendly guide to key concepts in MI. The clinical challenges addressed are ubiquitous across helping professions, and this book is unique in its focus on providing practical guidance on what to do when confronted with each challenge. Based on the authors' years of experience providing training and supervision in MI, this book answers one of the questions most frequently asked by those they have trained: "How can I use MI to address [insert clinical challenge]?" Fundamentals of Motivational Interviewing is an accessible and easy-to-use resource organized and written with the busy provider in mind. It is appropriate for all skill levels ranging from the MI novice with no prior training, to the experienced MI provider seeking to gain new knowledge and skills. Throughout the book the authors use boxes and case examples to clearly illustrate and emphasize key points. The authors also provide clear examples of the sometimes subtle distinction between MI-consistent and MI-inconsistent use of the communication skills and strategies. Professionals from diverse disciplines including medicine, allied health, criminal justice, psychology, counseling, social work, marriage and family therapy, as well as MI trainers working with all of these disciplines will find this book a useful resource, and it would be an appropriate text for any class that seeks to build MI and other psychotherapeutic skills.

This text presents a novel approach to teaching and learning the fundamental skills and techniques of counseling and psychotherapy, based on a "non-linear" process of thinking that more accurately reflects the reality of mental health practice. At the core of this text lies the idea that to best prepare students for practice with real clients, they have to learn how to think in a new way, the way that research has shown the most effective practitioners think. The result is a paradigm shift in how to teach and learn basic counseling skills, which separates this text from the competition and brings training up to speed with current practice.

Developing expertise in motivational interviewing (MI) takes practice, which is exactly the point of this engaging, user-friendly workbook. The volume is packed with real-world examples from a range of clinical settings, as well as sample interactions and hands-on learning activities. The author is an experienced MI researcher, clinician, and trainer who facilitates learning with quizzes, experiential exercises, and reproducible worksheets. The reader learns step by step how to practice core MI skills: raising the importance of behavior change, fostering the client's confidence, resolving ambivalence, solidifying commitment to change, and negotiating a change plan. The utility of the book is enhanced by the large-size format and lay-flat binding. The book shows how to navigate each session using microskills that many clinicians already know: open-ended questions, affirmations, reflective listening, and summaries, or OARS for short. This book is in the Applications of Motivational Interviewing series.

Vivid clinical material—including a chapter-length case example of a client presenting with anxiety and depression—enhances the utility of this accessible guide.
