In the last decade there has been a growing interest in the study of the interactions between the heart and the brain, especially in the field of cerebral ischemia. The interactions between cardiovascular and cerebrovascular diseases are of relevance not only for research investigation, but also for clinical implications in the daily clinical practice. i.e. A wealth of information has been gathered particularly on three topics, cardiovascular consequences of cerebral injuries, cardioembolic stroke, and association of carotid and coronary artery disease. The available information, however, is still sparse and fragmentary mainly because of the lack of communication between neurologists and cardiologists. With the aim of improving communication between several disciplines and technologies, we started to organize since 1987 in Bologna, Italy, an international Symposium on heart brain interactions to be held every 3 years. Our intention was to gather prominent clinicians and researchers from outstanding cardiologic and neuro logic institutions actively involved in the study of heart-brain interactions. The ambitious goal has been to fit different pieces of information like in a puzzle. This book originates from the contributions presented at the 2nd Sympo sium which was held in Bologna on November 30-December 1, 1990. The book is subdivided into three sections: I cardiovascular consequences of cerebral damage, II cardiogenic cerebral ischemia, III cerebrovascular and coronary artery disease.

Like many other new technologies which have since been seized and exploited by others, the industrial robot is a British invention. In 1957, a patent was produced by a British inventor, Cyril Walter Kenward, and later it became crucial to the future of robotics. For across the Atlantic two robot builders, Unimation and AMF, both infringed this patent and ultimately a cash settlement was made to Kenward. The owner of Unimation Inc. was Joseph Engelberger, an entrepreneur and avid reader of Isaac Asimov, the writer who helped to create the image of the benevolent robot. It is claimed that Engelberger's journey of fame down the road which led to him being hailed as the 'father of robotics' can be traced to the day that he met George C. Devol at a cocktail party. Devol was an inventor with an impressive list of patents to his name in the electronics field. One of Devol's patent applications referred to a Programmed Transfer Article. Devol's patent was issued in 1961 as US Patent 2,988,237, and this formed the basis of the Unimate robot which first saw the light of day in 1960. The first Unimate was sold to Ford

Motor Company which used it to tend a die-casting machine. It is perhaps ironic that the first robot was used by a company which refused to recognise the machine as a robot, preferring instead to call it a Universal Transfer Device.

The industrial application of robots is growing steadily. This is reflected in the number of manufacturers now involved in the field of robotics. Thanks to pioneers such as Joseph Engelberger of Unimation Inc, industry has seen their rapid deployment in all areas of manufacturing. Manufacturers of robots and robotic equipment have increased their production levels and at the same time have made great efforts to improve and adapt their products to allow them to be used for a wider range of applications. The demand for ever more sophisticated robotic devices has made the choice of robot for a particular application an extremely hard one. Industrial Robot Specifications has been compiled to enable users to assess robotics in the context of their own needs. The book contains detailed information on over 300 robots manufactured and distributed under licence throughout Europe. More than 90 companies are covered, and details are given of their distributors and agents, regional addresses and names of key contacts. Information is provided on robots as diverse as simple teaching machines,

costing perhaps £1500, to those highly sophisticated computer-controlled robot devices commonly found in flexible manufacturing systems, costing tens of thousands of pounds each. Introduction Industrial Robot Specifications is divided into three sec adjustable mechanisms that command manipulation.
