*This volume of "International Finance Review" focuses on the Asia-Pacific financial markets. A total of 22 original papers, not published elsewhere, have been selected from a competitive field. These papers utilize a variety of methods, including theoretical, empirical and qualitative to highlight a range of issues across the region. Several papers offer combinations of these different categories and among the empirical papers, there are a wide variety of datasets analyzed. While China does play a significant part in the analysis of five of the papers in this volume (this is to be expected given its importance in the region), a host of other countries are also considered. This ensures the volume is truly international in its scope. These papers each serve to contribute to the knowledge on a particular issue related to the financial markets within this region and for this volume, three main issues have been identified: integration, innovation and challenges. Articles are contributed by experts in their fields. It is truly international in scope.*

Understanding the current state of affairs and tools available in the study of international finance is increasingly important as few areas in finance can be divorced completely from international issues. International Finance reflects the new diversity of interest in international finance by bringing together a set of chapters that summarizes and synthesizes developments to date in the many and varied

areas that are now viewed as having international content. The book attempts to differentiate between what is known, what is believed, and what is still being debated about international finance. The survey nature of this book involves tradeoffs that inevitably had to be made in the process given the vast footprint that constitutes international finance. No single book can cover everything. This book, however, tries to maintain a balance between the micro and macro aspects of international finance. Although each chapter is self-contained, the chapters form a logical whole that follows a logical sequence. The book is organized into five broad categories of interest: (1) exchange rates and risk management, (2) international financial markets and institutions, (3) international investing, (4) international financial management, and (5) special topics. The chapters cover market integration, financial crisis, and the links between financial markets and development in some detail as they relate to these areas. In each instance, the contributors to this book discuss developments in the field to date and explain the importance of each area to finance as a field of study. Consequently, the strategic focus of the book is both broad and narrow, depending on the reader's needs. The entire book provides a broad picture of the current state of international

finance, but a reader with more focused interests will find individual chapters illuminating on specific topics.

Seminar paper from the year 2006 in the subject Business economics - Investment and Finance, grade: 1,0, Leeds Metropolitan University (Leeds Business School), course: International Financial Management, 5 entries in the bibliography, language: English, abstract: According to our market forecast study in 2003, demand for office supplies in the UK is declining which forces IFM Supplies plc (IFM) to penetrate new markets in order to achieve its growth and profit objectives. Another reason for exploring overseas markets is the aim to diversify risk across national boundaries making IFM less dependant upon single markets. According to the decision 63/2006, the board of directors is planning to establish foreign subsidiaries during the next few years in Europe, Asia and Africa. This report written by the finance department and directed to the CFO Mr Kamara, gives an overview of financial and non-financial factors (Chapter 2) that have to be considered before finalising the proposal. Potential risks and a brief description of possible external strategies to manage such risks are described in Chapter 3. The impact of export trade will be explored in Chapter 4. Chapter 5 highlights three remedies for IFM's high foreign debtors.

contributors examine the effects of taxation on decisions about international financial management, business investment, and international income shifting. They consider the influence of tax rules on dividend policy decisions within multinationals; the extent to which tax incentives affect the level and location of research and development across countries; and the fact that foreign-controlled companies operating in the United States pay lower taxes than do domestically controlled companies.

The eleventh edition of *Multinational Financial Management* is a comprehensive survey of the essential areas of the international financial market environment, including foreign exchange and derivative markets, risk management, and international capital markets and portfolio investment.

Designed for upper-level undergraduate and masters-level courses in international finance and management, this textbook offers readers a conceptual framework for analyzing key financial decisions of multinational firms. The authors both explain and simplify multinational financial management by illustrating how its basic principles share the same foundation as domestic corporate finance. Assuming no prior knowledge of international economics or finance, this substantially revised new edition builds upon the fundamental principles of domestic financial management to examine the unique dimensions of international finance. Readers are presented with a solid theoretical knowledgebase for examining decision problems, as well as practical analytical techniques that clarify the often-ambiguous guidelines used by international financial executives. All the traditional areas of corporate finance are explored from the perspective of a multinational corporation, focusing on elements rarely encountered in domestic finance such as multiple currencies, segmented capital markets, and political risks of nationalization or expropriation.
