

My Life With The Chimpanzees Jane Goodall

The New York Times bestselling author of *The Jane Austen Book Club* introduces a middle-class American family that is ordinary in every way but one in this novel that won the PEN/Faulkner Award and was a finalist for the Man Booker Prize. Meet the Cooke family: Mother and Dad, brother Lowell, sister Fern, and Rosemary, who begins her story in the middle. She has her reasons. “I was raised with a chimpanzee,” she explains. “I tell you Fern was a chimp and already you aren’t thinking of her as my sister. But until Fern’s expulsion...she was my twin, my funhouse mirror, my whirlwind other half and I loved her as a sister.” As a child, Rosemary never stopped talking. Then, something happened, and Rosemary wrapped herself in silence. In *We Are All Completely Beside Ourselves*, Karen Joy Fowler weaves her most accomplished work to date—a tale of loving but fallible people whose well-intentioned actions lead to heartbreaking consequences. “A gripping, big-hearted book...through the tender voice of her protagonist, Fowler has a lot to say about family, memory, language, science, and indeed the question of what constitutes a human

being.”—Khaled Hosseini

Jane Goodall's adventures with the chimpanzees and the important discoveries she has made about them have gained her worldwide recognition. Now she tells her exciting story in her own words! When Jane Goodall was twenty-six years old, she ventured into the forests of Africa to observe chimps in the wild. On her expeditions she braved the dangers of the jungle and survived encounters with leopards and lions in the African bush. And she got to know an amazing group of wild chimpanzees - intelligent animals whose lives, in work and play and family relationships, bear a surprising resemblance to our own. Jane Goodall has also written the bestseller *In the Shadow of Man* and *The Chimpanzee Family Book*. In 1977, she established the Jane Goodall Institute for Wildlife Research, Education, and Conservation to promote animal research throughout the world. SUMMARY: A DREAM COME TRUE From the time she was a girl, Jane Goodall dreamed of a life spent working with animals. Finally she had her wish. The renowned British primatologist continues the “engrossing account” of her time among the chimpanzees of Gombe, Tanzania (Publishers Weekly). In her classic, In the Shadow of Man, Jane Goodall wrote of her first ten years at Gombe. In Through a Window she continues the story, painting a more complete and vivid portrait of our closest relatives. On the shores of Lake Tanganyika, Gombe is a community where the principal residents are chimpanzees. Through Goodall’s eyes we watch young Figan’s relentless rise to power and old Mike’s crushing defeat. We learn how one mother rears her children to succeed and another dooms hers to failure. We witness horrifying murders, touching moments of affection, joyous births, and wrenching deaths. As Goodall compellingly tells the story of this intimately

intertwined community, we are shown human emotions stripped to their essence. In the mirror of chimpanzee life, we see ourselves reflected. “A humbling and exalting book . . . Ranks with the great scientific achievements of the twentieth century.” —The Washington Post “[An] absolutely smashing account . . . Thrilling, affectionate, intelligent—a classic.” —Kirkus Reviews, starred review

Eva’s hospital room looks out onto the skyscrapers of a huge city, but since waking up from her coma she only dreams of trees Thirteen-year-old Eva opens her eyes to find herself in a hospital, her body paralyzed while it heals from a devastating accident. Her mother says that Eva will be able to move her hands and face soon and that everything is going to be fine, but something in her voice tells Eva it’s not that simple. The doctors give Eva a keyboard that turns her typing into speech and controls a mirror that rotates to look around the room and out the window—every direction except back at her bed. What are the doctors trying to hide from her? And why, in an overpopulated world where humans have tamed all the wild places, does Eva keep dreaming of a forest she’s never seen? A great deal has happened since the publication of Jane Goodall: 40 Years at Gombe in 1999. Most recently, endeavors at the Gombe field site have included landmark research related to AIDS progression; establishing programs to improve sanitation, health care, and education in neighboring Tanzanian communities; and partnering with local people to pursue reforestation initiatives. The accomplishments of the past 10 years alone have given the Jane Goodall Institute a great deal to celebrate. In honor of the field site's 50th anniversary, STC is proud to release Jane Goodall: 50 Years at Gombe, a compelling pictorial tribute to Dr. Goodall's life, her studies of chimpanzee behavior, and her unflagging efforts to motivate people to make this world a better place. With a new format, a modern design, more than a dozen new photographs, and updated text throughout, this revised edition retraces five decades of compassion and discovery.

This book traces out the life and career of Jane Goodall as a watcher of English fauna to her adult work as scholar of animal behavior in Africa.

A moving, heartwarming memoir about a conservation hero and real-life chimpanzee whisperer—now the subject of the award-winning documentary film *Pant Hoot*. Stany Nyandwi 's gift for communicating with chimpanzees is so special that world-renowned primatologist Dr. Jane Goodall has called him a “ chimpanzee whisperer. ” His skills and devotion to these creatures—our closest living relatives, with whom we share 98.7 percent of our

DNA—have earned him international awards and sent him on travels within Africa and around the world. But he began life in poverty, born and raised in a dirt-floor, straw-roofed hut in rural Burundi. The Chimpanzee Whisperer is the story of his astonishing life journey. It is also an African story. Receiving only an elementary education before he quit school, he suffered injustice and tragic loss because of his ethnic group. He began caring for orphaned and rescued chimps in Burundi. When the country descended into civil war and genocide, he was forced to flee with the chimps and endured long separation from his family. Continuing to work with and learn about chimpanzees in Kenya, Uganda, and later South Africa, he made himself into an incomparable authority. His memoir has adventure, danger, and many unique and touching stories about chimpanzees that show his bond with and understanding of them. As told to award-winning author David Blissett, it reveals a remarkable man who has refused to let circumstances defeat him. Conditioned by hate, wounded by loss, he has lived for love, faith, and compassion, giving new life, as Dr. Jane Goodall writes in her foreword, “ to so many chimpanzees whose families, like his own, were torn apart by violence. ”

Enter a world of tender friendships, staunch loyalties, violent jealousies—and enduring love. As a child, Sheri Speede knew that she wanted to advocate for animals in any way she could. But it was not until many years after veterinary school, when she was transporting a chimpanzee named Pierre away from a biomedical facility as part of her job as a conservation advocate in Cameroon, that Dr. Speede discovered her true calling. She began to search for land for a forest sanctuary for captive chimpanzees that were held on chains and in small cages at local hotels. Dr. Speede eventually founded the Sanaga-Yong Chimpanzee Rescue Center, a forested home for orphans of the illegal ape meat trade. One chimpanzee, Dorothy, was rescued by Dr. Speede and her colleagues from a bleak existence imprisoned on a chain and forged a deep

friendship with her. Dr. Speede explains how chimpanzees, like humans, are capable of a broad spectrum of emotional behaviors—both hateful and loving. Dr. Speede also candidly reveals her own struggles as a stranger in a foreign culture trying to adjust to rural African village life. And she admits that unlike Dorothy, she was not always kind, gentle, and forgiving. Dorothy died of old age at the sanctuary, and a photograph of Dorothy's funeral, in which Dr. Speede cradled Dorothy's head while her family of chimpanzees mournfully viewed her body, went viral after being published in National Geographic. The world was surprised at the depth of the chimps' grief at the loss of their friend, but Dr. Speede was not. Through the chimps, she had come to understand the meaning of love, loyalty, and true connection. While this is a compelling story about the emotional complexity of the chimpanzees she rescued and befriended, it is also Dr. Speede's story. Major events in her personal life, including love affairs, dangerous run-ins with criminals, and the birth of her daughter, unfold as the development of her primate rescue center runs parallel to her own development. Ultimately, *Kindred Beings* is a story of profound resilience, of both the apes and the woman who loved them.

A NEW YORK TIMES NOTABLE BOOK OF 2020 "In this superbly articulate cri de coeur, Safina gives us a new way of looking at the natural world that is radically different." "The Washington Post New York Times bestselling author Carl Safina brings readers close to three non-human cultures—what they do, why they do it, and how life is for them. A New York Times Notable Books of 2020 Some believe that culture is strictly a human phenomenon. But this book reveals cultures of other-than-human beings in some of Earth's remaining wild places. It shows how if you're a sperm whale, a scarlet macaw, or a chimpanzee, you too come to understand yourself as an individual within a particular community that does things in specific ways, that has traditions. Alongside genes, culture is a second form of inheritance, passed through

generations as pools of learned knowledge. As situations change, social learning—culture—allows behaviors to adjust much faster than genes can adapt. *Becoming Wild* brings readers into intimate proximity with various nonhuman individuals in their free-living communities. It presents a revelatory account of how animals function beyond our usual view. Safina shows that for non-humans and humans alike, culture comprises the answers to the question, “How do we live here?” It unites individuals within a group identity. But cultural groups often seek to avoid, or even be hostile toward, other factions. By showing that this is true across species, Safina illuminates why human cultural tensions remain maddeningly intractable despite the arbitrariness of many of our differences. *Becoming Wild* takes readers behind the curtain of life on Earth, to witness from a new vantage point the most world-saving of perceptions: how we are all connected.

"This biography for children will trace Goodall's life, but each chapter will also focus on two or more the chimpanzees that she observed, with information in sidebars about these particular animals. Along with

biographical details, the book will explore the ethical issues that surround Goodall's work and show what has changed in our understanding of Great Apes. What do we know today about these animals in terms of language, speech, tool use, and DNA? How has sophisticated technology - GPS systems, Satellite imagery, portable digital microphones - been used to gain new information about animal populations."--

Introduces the anatomy, behavior, and life cycle of chimpanzees, and discusses the reasons they are endangered and conservation efforts. Patrick McDonnell-beloved, bestselling author-artist and creator of the Mutts syndicated comic strip--shares the inspiring story of young Jane Goodall, the legendary and inspiring conservationist featured in the hit documentary film Jane. In his characteristic heartwarming style, Patrick McDonnell tells the story of the young Jane Goodall and her special childhood toy chimpanzee named Jubilee. As the young Jane observes the natural world around her with wonder, she dreams of "a life living with and helping all animals," until one day she finds that her dream has come true. With anecdotes taken directly from Jane Goodall's autobiography, McDonnell makes this very true story

accessible for the very young--and young at heart. One of the world's most inspiring women, Dr. Jane Goodall is a renowned humanitarian, conservationist, animal activist, environmentalist, and United Nations Messenger of Peace. In 1977 she founded the Jane Goodall Institute (JGI), a global nonprofit organization that empowers people to make a difference for all living things.

World-renowned behavioral scientists Jane Goodall and Marc Bekoff have set forth ten trusts that we must honor as custodians of the planet. They argue passionately and persuasively that if we put these trusts to work in our lives, the earth and all its inhabitants will be able to live together harmoniously. The Ten Trusts expands the concept of our obligation to live in close relationship with animals -- for, of course, we humans are part of the animal kingdom -- challenging us to respect the interconnection between all living beings as we learn to care about and appreciate all species. The world is changing. We are gradually becoming more aware of the damage we are inflicting on the natural world. At this critical moment for the earth, Goodall and Bekoff share their hope and vision of a world where human cruelty and hatred are transformed into compassion and love for all living beings.

They dream of a day when scientists and non-scientists can work together to transform the earth into a place where human beings live in peace and harmony with animals and the natural world. Simple yet profound, The Ten Trusts will not only change your perspective regarding how we live on this planet, it will establish your responsibilities as a steward of the natural world and show you how to live with respect for all life.

percent difference in DNA that has created such a divergence between evolutionary cousins? In this fascinating, provocative, passionate, funny, endlessly entertaining work, renowned Pulitzer Prize-winning author and scientist Jared Diamond explores how the extraordinary human animal, in a remarkably short time, developed the capacity to rule the world . . . and the means to irrevocably destroy it.

From bestselling and award-winning author T.C. Boyle, a lively, thought-provoking novel that asks us what it would be like if we could really talk to the animals When animal behaviorist Guy Schermerhorn demonstrates on a TV game show that he has taught Sam, his juvenile chimp, to speak in sign language, Aimee Villard, an undergraduate at Guy's university, is so taken with the performance that she applies to become his assistant. A romantic and intellectual attachment soon morphs into an interspecies love triangle that pushes hard at the boundaries of consciousness and the question of what we know and how we know it. What if it were possible to speak to the members of another species—to converse with them, not just give commands or coach them but to really have an exchange of ideas and a meeting of minds? Did apes have God? Did they have souls? Did they know about death and redemption? About prayer? The economy, rockets, space? Did they miss the jungle? Did they even know what the jungle was? Did they dream? Make wishes? Hope for the future? These are some the questions T.C. Boyle asks in his wide-ranging and hilarious new novel *Talk to Me*, exploring what it means to be human, to communicate with another, and to truly know another person—or animal.

An exhilarating quest into a remote African forest to examine chimpanzees and understand the roots of human behavior. As a young student, John Crocker embarked on the adventure of a lifetime, spending eight months in the Gombe forest working with Jane Goodall. He followed families of wild chimpanzees from sunrise to sunset and learned the fundamental behavioral traits of these chimps as they raised their offspring. One chimpanzee captivated him. Her name was Fifi, and she displayed extraordinary patience and reassurance toward her infant, Freud. Upon returning home and becoming a doctor, Crocker found himself incorporating the lessons he learned from Fifi into his work as a father and physician. When he witnessed his young patients rocketing around his exam room, he would picture Fifi's patience and tacit approval of Freud's uninhibited and joyful exploration. Crocker shares how his time spent with our closest animal cousins has helped him better understand his patients with ADD, anxiety, and depression, and how primate traits hardwired into our own natural behavior help chimpanzees protect their community, raise their young, and survive. Finally, chronicling his return to Gombe thirty-six years later with his own son, he reflects on how his experience with the chimps has come full circle. An illuminating book that will raise thought-provoking questions about the evolution of human behavior and the importance of patience and strong family bonds, *Following Fifi* provides a greater understanding of what it means to be human.
