**The contributions to this book address a series of ‘confrontations’—debates between intellectual communities, the interplay of texts and images, and the intersection of monumental architecture and physical terrain—and explore the ways in which the legacy of these encounters, and the human responses to them, conditioned cultural production in early South Asia (c. 4th-7th centuries CE). Rather than an agonistic term, the book uses ‘confrontation’ as a heuristic to examine historical moments within this pivotal**

**period in which individuals and communities were confronted with new ideas and material expressions. The first half of the volume addresses the intersections of textual, material, and visual forms of cultural production by focusing on three primary modes of confrontation: the relation of inscribed texts to material media, the visual articulation of literary images and, finally, the literary interpretation and reception of built landscapes. The second part of the volume focuses on confrontations both within and between intellectual communities. The articles address the dynamics between peripheral and dominant movements in the history of Indian philosophy. *This book covers both the fundamental and applied aspects of advanced Na-ion batteries (NIB) which have proven to be a potential challenger to Li-ion batteries. Both the chemistry and design of positive and negative electrode materials are examined. In NIB, the electrolyte is also a crucial part of the batteries and the recent research, showing a possible alternative to classical electrolytes – with the development of ionic liquid-based electrolytes – is also explored. Cycling performance in NIB is also strongly associated with the quality of the electrode-electrolyte interface, where electrolyte degradation takes place; thus, Na-ion Batteries details the recent achievements in furthering knowledge of this interface. Finally, as the ultimate goal is commercialization of this new electrical storage technology, the last chapters are dedicated to the industrial point of view,*

Water pollution has become one of the biggest concerns of the world. After the industrialisation and urbanisation, environmental pollution has become an enormous concern. Water pollution results in biomagnifications by entering the food chain. As a result water pollution and its risks need to be considered seriously and solutions need to be researched. This volume looks into such topics as bioremediation, nanobiotechnology, biosensors, and enzyme degradation to find solutions to these problems.
