A beautiful book that not only helps families develop traditions based on the significance of Thanksgiving, but also builds a foundation of values in their lives.

Enoch is studying HG Wells's classic novel, *The Time Machine*. His teacher has brought him to the museum to gain a greater appreciation of the book, but, as the museum closes, the lights dim and Enoch finds himself alone. Or is he? Has some greater power lured him here? What is the entire building to vibrate? Some mighty machine throbbing into life? Take the Time journey. You may never return. Timing the Machine is a highly anticipated sequel to *The Visions of Ichabod X*, shortlisted for the Australian Book Designers' awards 2016. Professor Gary Crew is the author of the international bestseller *The Watertower*, among many other multi-award winning titles. Paul Orsullivan is the author of the iconic *The Visions of Ichabod X*, also by Gary Crew.

Practical Atlas of Ruminant and Camelid Reproductive Ultrasonography is a practical, fully referenced, image-based guide to the essential concepts of reproductive ultrasound in domesticated ruminants and camelids. Providing information to enable practitioners to incorporate ultrasound service into their practices, the book also includes more specialized information for advanced techniques such as fetal sexing, embryo transfer, color Doppler, and others. *Practical Atlas of Ruminant and Camelid Reproductive Ultrasonography* is a must-have reference for ruminant and camelid practitioners, instructors, and students.

This comprehensive and timely textbook covers all aspects of the evidence-based management of genitourinary cancers and explains the fundamental principles underlying the available diagnostic and treatment approaches, including chemotherapy, radiotherapy, immunotherapy, and surgery. For each type of cancer – prostate, bladder, renal, testicular, and penile, plus rare urologic malignancies – clinical presentation, diagnosis, and treatment strategies are described in detail and information is provided on etiology, epidemiology, risk factors, and pathology, including TNM classification. Careful attention is also devoted to the complications that may be encountered when treating urologic malignancies and to the management of these complications. The text is complemented by the inclusion of numerous high-definition photographs and illustrations. *Urologic Oncology* will be a valuable reference and source of guidance for all oncologists, urologists and practitioners in related disciplines who treat patients with urologic cancers.

This book reviews the history of the Highlander Folk School (Summerfield, Tennessee) and describes school programs that were developed to support Black and White southerners involved in social change. The Highlander Folk School was a small, residential adult education institution founded in 1932. The first section of the book provides background information on Myles Horton, the founder of the school, and on circumstances that led him to establish the school. Horton's experience growing up in the South, as well as his educational experience as a sociology and theology student, served to strengthen his dedication to democratic social change through education. The next four sections of the book describe the programs developed during the school's 30-year history, including educational programs for the unemployed and impoverished residents of Cumberland Mountain during the Great Depression; for new leaders in the southern industrial union movement during its critical period; for groups of small farmers when the National Farmers Union sought to organize in the South; and for adult and student leadership in the emerging civil rights movement. Horton's pragmatic leadership allowed educational programs to evolve in order to meet community needs. For example, Highlander's civil rights programs began with a workshop on school desegregation and evolved more broadly to prepare volunteers from civil rights groups to teach "citizenship schools," where Blacks could learn basic literacy skills needed to pass voter registration tests. Beginning in 1958, and until the school's charter was revoked and its property confiscated by the State of Tennessee in 1961, the school was under mounting attacks by highly-placed government leaders and others because of its support of the growing civil rights movement. Contains 270 references, chapter notes, and an index. (LP)

Phycology is the study of algae, the primary photosynthetic organisms in freshwater and marine food chains. As a food source for zooplankton and filter-feeding shellfish, the algae are an extremely important group. Since the publication of the first edition in 1981, this textbook has established itself as a classic resource on phycology. This revised edition maintains the format of previous editions, whilst incorporating more recent information from nucleic acid sequencing studies. Detailed life-history drawings of algae are presented alongside information on the cytology, ecology, biochemistry, and

economic importance of selected genera. Phycology is suitable for upper-level undergraduate and graduate students following courses in phycology, limnology or biological oceanography. Emphasis is placed on those algae that are commonly covered in phycology courses, and encountered by students in marine and freshwater habitats.

Mohs Micrographic Surgery, an advanced treatment procedure for skin cancer, offers the highest potential for recovery—even if the skin cancer has been previously treated. This procedure is a state-of-the-art treatment in which the physician serves as surgeon, pathologist, and reconstructive surgeon. It relies on the accuracy of a microscope to trace and ensure removal of skin cancer down to its roots. This procedure allows dermatologists trained in Mohs Surgery to see beyond the visible disease and to precisely identify and remove the entire tumor, leaving healthy tissue unharmed. This procedure is most often used in treating two of the most common forms of skin cancer: basal cell carcinoma and squamous cell carcinoma. The cure rate for Mohs Micrographic Surgery is the highest of all treatments for skin cancer—up to 99 percent even if other forms of treatment have failed. This procedure, the most exact and precise method of tumor removal, minimizes the chance of regrowth and lessens the potential for scarring or disfigurement

Freshwater Algae of North America: Ecology and Classification, Second Edition is an authoritative and practical treatise on the classification, biodiversity, and ecology of all known genera of freshwater algae from North America. The book provides essential taxonomic and ecological information about one of the most diverse and ubiquitous groups of organisms on earth. This single volume brings together experts on all the groups of algae that occur in fresh waters (also soils, snow, and extreme inland environments). In the decade since the first edition, there has been an explosion of new information on the classification, ecology, and biogeography of many groups of algae, with the use of molecular techniques and renewed interest in biological diversity. Accordingly, this new edition covers updated classification information of most algal groups and the reassignment of many genera and species, as well as new research on harmful algal blooms. Extensive and complete Describes every genus of freshwater algae known from North America, with an analytical dichotomous key, descriptions of diagnostic features, and at least one image of every genus. Full-color images throughout provide superb visual examples of freshwater algae Updated Environmental Issues and Classifications, including new information on harmful algal blooms (HAB) Fully revised introductory chapters, including new topics on biodiversity, and taste and odor problems Updated to reflect the rapid advances in algal classification and taxonomy due to the widespread use of DNA technologies

This technical memorandum covers the small-scale production of footwear (shoes and sandals) of differing types and quality. It provides detailed technical and economic information covering four scales of production ranging from eight pairs per day to 1,000 pairs per day. A number of alternative technologies are described, including both equipment-intensive and labour-intensive production methods. Subprocesses are described in great detail, with diagrams of pieces of equipment which may be manufactured locally. A list of equipment suppliers is also provided for those pieces of equipment which m.

This book collates the latest information on Kappaphycus and Eucheuma seaweeds. The edited volume provides an important companion to anyone studying or working with what is the world's largest cultivated marine plant biomass. The contributing authors have excelled in providing information on production and present and future uses of these carrageenan-bearing seaweeds. Important elements of taxonomy, distribution and methods of cultivation and processing are presented to the reader in an accessible and easily understood format. The book provides a number of valuable opinions on value addition and MUZE technologies which highlight value-chains associated with these important red algae.

By turns tragic and funny, religious and heartbreaking, angry and surprisingly familiar, *Half/Life* represents the altogether diverse memories and reflections of a handful of Half-Jews, among them Thisbe Nissen, Katharine Weber, Jennifer Traig, Jeff Sharlet, and Joyce Maynard. Each of these writers was born into the so-called "dilemma of intermarriage," and each has spent a lifetime grappling with how to define themselves...or not. Book jacket.

This book is a comprehensive guide to the use of modern radiation therapy techniques for prostate cancer and other common and rare genitourinary malignancies. It will be an ideal resource for clinicians and trainees wishing to delve more deeply into the practical and technical aspects of radiotherapy for these malignancies and will serve to enhance day-to-day management in clinical practice. The first section is devoted to prostate cancer and includes coverage of low dose rate and high dose rate brachytherapy, conventionally fractionated, moderately hypofractionated, and ultra-hypofractionated external beam radiotherapy, and proton therapy. The second section focuses on radiotherapy considerations in relation to bladder cancer, testicular cancer, renal cell carcinoma, and rare malignancies such as penile cancer and urethral cancer. Radiotherapeutic treatment of patients with genitourinary malignancies now involves unprecedented precision and complexity, and this book will enable readers to exploit fully the exciting advances that have been achieved in recent years.

Molecular Modeling in Drug Design

Make Mend For Victory

This work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it. This work is in the public domain in the United States of America, and possibly other nations. Within the United States, you may freely copy and distribute this work, as no entity (individual or corporate) has a copyright on the body of the work. Scholars believe, and we concur, that this work is important enough to be preserved, reproduced, and made generally available to the public. To ensure a quality reading experience, this work has been proofread and republished using a format that seamlessly blends the original graphical elements with text in an easy-to-read typeface. We appreciate your support of the preservation process, and thank you for being an important part of keeping this knowledge alive and relevant.

Since the first attempts at structure-based drug design about four decades ago, molecular modelling techniques for drug design have developed enormously, along with the increasing computational power and structural and biological information of active compounds and potential target molecules. Nowadays, molecular modeling can be considered to be an integral component of the modern drug discovery and development toolbox. Nevertheless, there are still many methodological challenges to be overcome in the application of molecular modeling approaches to drug discovery. The eight original research and five review articles collected in this book provide a snapshot of the state-of-the-art of molecular modeling in drug design, illustrating recent advances and critically discussing important challenges. The topics covered include virtual screening and pharmacophore modelling, chemoinformatic applications of artificial intelligence and machine learning, molecular dynamics simulation and enhanced sampling to investigate contributions of molecular flexibility to drug-receptor interactions, the modeling of drug-receptor solvation, hydrogen bonding and polarization, and drug design against protein-protein interfaces and membrane protein receptors.

The Atlantic Forest is one of the 36 hotspots for biodiversity conservation worldwide. It is a unique, large biome (more than 3000 km in latitude; 2500 in longitude), marked by high biodiversity, high degree of endemic species and, at the same time, extremely threatened. Approximately 70% of the Brazilian population lives in the area of this biome, which makes the conflict between biodiversity conservation and the sustainability of the human population a relevant issue. This book aims to cover: 1) the historical characterization and geographic variation of the biome; 2) the distribution of the diversity of some relevant taxa; 3) the main threats to biodiversity, and 4) possible opportunities to ensure the biodiversity conservation, and the economic and social sustainability. Also, it is hoped that this book can be useful for those involved in the development of public policies aimed at the conservation of this important global biome.

Foundational Teaching on Discerning What Is Happening in the Spiritual Realm For many believers, operating in the gifts of the Spirit has become a normal way of life. Yet there is one often-overlooked, often-misunderstood gift crucial to the well-being of the church: the gift of discerning spirits. This gift is the powerful supernatural ability to hear and see into the spiritual realm, yet many people who have it may think they are crazy. Finding no help from the church, some have turned to medical doctors and actually been diagnosed with a mental disorder. Jennifer Eivaz, a trusted prophetic voice, has been there, and she offers hope, healing, and practical help. Pulling back the veil, she · lays a biblical foundation for how this gift works · helps you discern what you are seeing and hearing · reveals what is happening in the spiritual realm · provides insight into the demonic, the angelic, and spiritual happenings · and more. The enemy is on the move. More than ever, the church needs people who operate in this powerful gift to expose hidden threats and help lead the church to victory.

CUA Press is proud to announce the CUA Studies in Canon Law. In conjunction with the School of Canon Law of the Catholic University of America, we are making available, both digitally and in print, more than 400 canon law dissertations from the 1920s - 1960s, many of which have long been unavailable. These volumes are rich in historical content, yet remain relevant to canon lawyers today. Topics covered include such issues as abortion, excommunication, and infertility. Several studies are devoted to marriage and the annulment process; the acquiring and disposal of church property, including the union of parishes; the role and function of priests, vicars general, bishops, and cardinals; and juridical procedures within the church. For those who seek to understand current ecclesial practices in light of established canon law, these books will be an invaluable resource. This reference revolutionizes serger sewing with creative approaches, by combining decorative threads with contemporary construction methods. The guidelines are clear and innovative.

Quantile regression is gradually emerging as a unified statistical methodology for estimating models of conditional quantile functions. By complementing the exclusive focus of classical least squares regression on the conditional mean, quantile regression offers a systematic strategy for examining how covariates influence the location, scale and shape of the entire response distribution. This monograph is the first comprehensive treatment of the subject, encompassing models that are linear and nonlinear, parametric and nonparametric. The author has devoted more than 25 years of research to this topic. The methods in the analysis are illustrated with a variety of applications from economics, biology, ecology and finance. The treatment will find its core audiences in econometrics, statistics, and applied mathematics in addition to the disciplines cited above.

Since the original publication of *Allogeneic Stem Cell Transplantation: Clinical Research and Practice*, Allogeneic hematopoietic stem cell transplantation (HSC) has undergone several fast-paced changes. In this second edition, the editors have focused on topics relevant to evolving knowledge in the field in order to better guide clinicians in decision-making and management of their patients, as well as help lead laboratory investigators in new directions emanating from clinical observations. Some of the most respected clinicians and scientists in this discipline have responded to the recent advances in the field by providing state-of-the-art discussions addressing these topics in the second edition. The text covers the scope of human genomic variation, the methods of HLA typing and interpretation of high-resolution HLA results. Comprehensive and up-to-date, *Allogeneic Stem Cell Transplantation: Clinical Research and Practice, Second Edition* offers concise advice on today's best clinical practice and will be of significant benefit to all clinicians and researchers in allogeneic HSC transplantation.
