Neurocutaneous syndromes unify a group of rare neurological disorders in which the initial identification depends on simple visual diagnosis. They include a large group of neurological disorders (neurofibromatosis type I, tuberous sclerosis complex, Sturge-Weber Syndrome, Von Hippel Lindau syndrome, hypomelanosis of Ito, and others) which feature cutaneous and ocular lesions, brain malformations, central and peripheral brain tumours, mental retardation, seizures, and psychiatric problems. In the past few years our knowledge of

neurocutaneous syndromes has increased dramatically. Detailed information about the clinical features, natural history, and management of these complex multisystem disorders, and new data on the genetics of these conditions, has provided insight into their classification, pathophysiology, molecular biology, and genotype-phenotype correlations. This handbook offers a succinct study of Childhood Development Paediatrics with practical applications for helping the child and family through all areas of the developmental process. The book covers diverse topics like developmental delay, learning difficulties, attention deficit disorders, autism, Asperger
