The few models on safety management that are available tend to explain a procedure to manage safety rather than a safety management system. The research carried out here, however, models safety management by transforming a common procedural model (i.e. the HSE's model, 1997) into a functional systems representation. The overall goal of the model is to offer clear graphic lines of influence of its different components on organisational safety. The model is innovative not in the components that it considers but in the representation of those

components, which details relative distances between elements and, therefore, opens doors to model-driven hypotheses which account for those distances. Therefore, hypotheses are more accurate in their predictions. This model is firstly explored in the construction sector. Results from this exploratory research support the adequacy of the model to understanding safety management and encourage future research of a more confirmatory nature.

The book would serve as a standard textbook on the subject of Industrial Marketing, and thus, will be useful for students of management. This book is aimed at providing better conceptual understanding of the industrial marketing, as well as, enhancing the skills required in its practice. The book begins with the review of fundamentals of

marketing, concepts in industrial marketing, industrial marketing environment, gathering market intelligence, organisational buying behaviour, and segmentation and positioning in industrial marketing. Then, it goes on to give an insightful analysis of product mix, price mix, marketing channels, marketing control, and project marketing. The text concludes with a discussion on commercial terms, clauses and documents involved in the practice of industrial marketing. The text provides eleven case studies which lend a practical flavour to it, and illustrate the concepts discussed. Key Features • Shows the

importance and selection criteria of marketing channels. • Explains commercial clauses and contents of documents. • Explains difference between product marketing and project marketing. • Provides questions at the end of every chapter. Interspersed with real-life examples, this book should also prove very handy to the practicing manager. New to this edition • Four new chapters, namely, Review of Marketing Fundamentals, Industrial Marketing Environment, Negotiating Sales Deals and Key Account Management have been added. • Keeping in mind the importance of case studies for both the students, as

requires ever more critical and complex designs. Therefore, the need for accurate and efficient approaches to assess uncertainties in loads, geometry, material properties, manufacturing processes, and operational environments has increased significantly. Reliability-based techniques help develop more accurate initial guidance for robust design and help to identify the sources of significant uncertainty in structural systems. It also introduces more modern methods and advancements, and emphasizes the most useful methods and techniques used in reliability and risk studies, while elaborating their practical applications and limitations rather than detailed derivations. Features: Provides a practical and comprehensive overview of reliability and risk analysis and design techniques. Introduces resilient and smart structures/infrastructure that will lead to more reliable and sustainable societies. A Tool for Project Management

A handbook of ideas, methods and techniques aimed at assisting pioneering institutions to develop the construction industry in their countries. Based on four case studies of successful institution building, this book discusses the numerous problems that have been faced and overcome.

Second in a two-volume set, this book discusses the role of public-private partnerships (PPPs) in global transportation infrastructure, specifically focusing on roads, bridges, and parking. To provide vital services in an era of shrinking government budgets, public-private

partnerships have become an increasingly important part of travel infrastructure worldwide. This book describes and analyses the structure of various models of PPPs in several countries, evaluating their effectiveness, and drawing policy implications for future use. The chapters were written by leading international researchers and practitioners in the transportation field where each chapter is a case study on the adoption, implementation, and outcome of transportation services. Taken together, these diverse case studies provide an integrated framework for evaluating, using PPPs, and suggesting policy

implications to both the public and the private sectors in transportation. Providing rigorous empirical analysis of PPPs in transportation, this volume will be of interest to researchers in public administration, political science, public choice, and economics as well as practitioners and policymakers involved in establishing and monitoring PPPs in transportation.

Using a study of the housing-construction industry in India, Theo van der Loop focuses on small-scale building firms and their relations of subcontracting, and then on labour relations and the occupational mobility of both full-time and part-time workers. The book shows that the labour system has a significant impact on the production system while the structure of the labour market affects industrial development. Finally, the author presents theoretical and policy implications of his findings regarding employment and small-scale enterprises.
