***The impact of humanity on the earth overshoots the earth's bio-capacity to supply humanity's needs, meaning that people are living off earth's capital rather than its income. However, not all countries are equal and this book explores why apparently similar patterns of daily living can lead to larger and smaller environmental impacts. The contributors describe daily life in many different places in the world and then calculate the environmental impact of these ways of living from the perspective of ecological and carbon footprints. This leads to comparison and discussion of what living within the limits of the planet might mean. Current footprints for countries are derived from national statistics and these hide the variety of impacts made by individual people and the choices they make in their daily lives. This book takes a 'bottom-up' approach by calculating the footprints of daily living. The purpose is to show that small changes in behaviour now could avoid some very challenging problems in the future. Offering a global perspective on the question of sustainable living, this book will be of great interest to anyone with a concern for the future, as well as students and researchers in environmental studies, human geography and development studies.***

***This study chronicles the success of the Japanese car in America. Starting with Japan's first gasoline-powered car, the Takuri, it examines early Japanese inventors and automotive conditions in Japan; the arrival of Japanese cars in California in the late 1950s; consumer and media reactions to Japanese manufacturers; what obstacles they faced; initial sales; and how the cars gained popularity through shrewd marketing. Toyota, Honda, Datsun (Nissan), Mazda, Subaru, Isuzu, and Mitsubishi are profiled individually from their origins through the present. An examination follows of the forced cooperation between American and Japanese manufacturers, the present state of the industry in America, and the possible future of this union, most importantly in the race for a more environmentally-sound vehicle.***

This practical and invaluable textbook covers the principles and practice of U.S. consumer bankruptcy law, known as Chapter 7 and Chapter 13, for paralegals and legal studies students. Consumer Bankruptcy Law provides step-by-step guidance on handling a bankruptcy case, from client interviews to preparing and filling the bankruptcy petition, as well as the issues which may arise after. Featuring practical examples throughout, the book ensures that you will become familiar not only with core legal concepts but also with the real-life issues and pitfalls that can occur.

Screenshots on how to complete a bankruptcy petition are featured, along with flowcharts of the processes of consumer bankruptcy law in the U.S. and exercises to test your knowledge at the end of each chapter. Including online resources for both students and instructors to benefit from, such as multiple-choice questions and PowerPoints summarizing each chapter, Consumer Bankruptcy Law: A Practical Guide for Students and Professionals will be an indispensable resource for anyone engaging in this important area of legal practice.

Interviewing skills are not simple motor skills. Rather, they involve a high-order combination of observation, empathic sensitivity, and intellectual judgment. This guidebook, now available from Waveland Press, provides a process model and a corresponding set of classroom-tested exercises designed to improve basic interviewing skills. The model called the Skill Learning Cycle provides an initial, guided experience for the complete interview-learning process, including planning, doing, and analyzing phases. It also stands as a model for the student to use in the future for continued growth in interviewing skills. In order to focus on the most basic interviewing skills, only the information-gathering function, which is common to all interviews, is discussed.
