Concepts and Models for Service-learning in Biology

This volume is the 18th in a series of monographs on service learning and the academic disciplines. The articles in this volume provide an array of service learning courses in biology that demonstrate active student participation in thoughtfully organized service experiences that meet real community needs and are integrated with the students' academic curriculum. The articles are: (1) "Educational Benefits Associated with Service-Learning Projects in Biology Curricula" (John C. Kennell); (2) "An Environmental Science AP Public School Project" (Nancy K. Prentiss); (4) "Service Stimulates Science Learning in At-Risk Kids: The Millikin Model" (Marianne Robertson); (5) "Virginia STEP: Evidence That Service-Learning Can Enhance a College Biology Program" (Alan Rafljo); (6) "Service-Learning in Biology: Providing a College Experience for High School Students" (Scott S. Kinnes); (7) "Expanding the Reach of University Courses in Biology and Health To Provide Meaningful Service to Underserved Communities" (Amal Abu-Shakra and Tun Kyaw Nyein); A Project-Based Interdisciplinary Service-Learning Course" (A. Christine Brown and Samuel A. McReynolds); (9) "Service-Learning in Biology: Using the Internet and Desktop Videoconferencing" (Paul D. Austin); (10) "Service-Learning in the Natural Sciences: North Seattle Community College" (Peter Lortz); (11) "Service-Learning and Field Biology in Postcolonial Perspective: The Bahamas Environmental Research Center as a Case Study" (Luther Brown); and (12) "Biology and Service-Learning: Logical Links" (Joel H. Ostroff and Redefining the Relationship." 1996 Campus Compact: summary course descriptions, suggested readings, and a list of contributors. Each paper contains references. (SLD)

Research Journal of the Water Pollution Control Federation

**This study was conducted to determine whether conventional secondary biological treatment detoxifies sulphite pulp mill effluents. Seven sulphite pulp mills, varying in pulping base, wood species, type of treatment and recovery system and geographical location were studied. All mills were located in the United States and practiced some form of chemical recovery and biological treatment (aerated lagoons or activated sludge). Samples of mill effluents before and after biological treatment were collected four times over six months. Standard 96-hour static bioassays using rainbow trout (Salmo gairdneri) determined the LC50 value of each sample. Acute lethality was defined by a compliance standard of LC50=100%. Other routine analyses such as pH, biochemical and chemical oxygen demand, ammonia and total suspended solids were also conducted.**

**Biological Treatment : First Volume of the Proceedings of an IAWPRC Symposium Held at the University of Technology, Finland, 9-12 June 1987**

The book summarizes the emerging topic about the effects of SMF on biological samples ranging from single molecules, subcellular compartments, and cells to whole organisms, as well as the potential application of SMF in clinical treatment of cancer and other diseases. With the development and growing popularity of modern appliances, including MRI in the hospitals, the potential impact of magnetic fields on human health is invoking increasing concerns. At the same time, SMF has been used in the clinical treatment of some reservations and uncertainties about these treatments, which are largely due to the differential biological effects reported in the literature. These experimental inconsistencies are mainly caused by variations such as different magnetic field types, intensities, treatment time as well as biological samples examined. This volume will help clarify some dilemmas in this field and encourage further investigations in order to achieve a better understanding of the biological effects of SMF, aiming for a rational application of scientists, doctors, and students who are interested in magnetic fields and life sciences.

Part 1: Chapters 1-17

NOTE: NO FURTHER DISCOUNT FOR THIS PRINT PRODUCT -- OVERSTOCK SALE -- Significantly reduced list price Summarizes and updates the current National Cooperative Soil Survey conventions for describing soils. Intended to be both current and usable by the entire soil science community. The text explores the types of soil techniques and includes a Field Equipment checklist with samples of common soil equipment as part of the field guide. Effluent Control in Industry

Southern Pulp and Paper Manufacturer

*This volume considers water pollution control in the pulp and paper industry. It covers: effluent-free production; effluents and biotransformations; environmental impact assessments; removal of chlorinated organics; enhanced biodegradation; and removal of non-biodegradable residues.*
