Since the publication of the previous edition, the best-selling Handbook of Public Administration enters its third edition with substantially revised, updated, and expanded coverage of public administration history, theory, and practice. Edited by preeminent authorities in the field, this work is unparalleled in its thorough coverage and comprehensive references. This handbook examines the major areas in public administration including public budgeting and financial management, human resource management, decision making, public law and regulation, and political economy. Providing a strong platform for further research and advancement in the field, this book is a necessity for anyone involved in public administration, policy, and management. This edition includes entirely new chapters on information technology and conduct of inquiry. In each area of public administration, there are two bibliographic treatises written from different perspectives. The first examines the developments in the field. The second analyzes theories, concepts, or ideas in the field's literature.

Over the last decade, many local students have preferred to study overseas. This has caused governments to announce the creation of programs and developments in the higher education sector to upgrade South-East Asia to a leading education hub. Moreover, many governments declared that they would work on the insurance of learning to increase the quality of the degrees and the teaching itself. This has led many to question the results of these declarations. Higher Education Challenges in South-East Asia provides an overview of what has been happening over the last ten years in higher education in South-East Asia. It also works to solve the challenges in modern education such as the impacts of digitalization, globalization, and Generation Y and Z learning styles. Covering topics that include globalization, educational technologies, and comparative teaching, this book impacts academic institutions, policymakers, government officials, university and college administrators and leaders, academicians, researchers, and students.

The world is currently experiencing the advent of new information technologies with dynamic changes, which can be considered as one of the greatest business threats today. Accordingly, international business and academia have claimed to be working towards developing innovations in accounting and finance that are useful for all stakeholders. The recent accounting and finance scholarship has moved forward toward new innovations that advance professional practice. This book introduces and discusses new innovations in accounting and finance, including management accounting, blockchain, E-business models, data analytics, artificial intelligence, cryptocurrency, bitcoin, digital assets, and associated risks. It also sheds light on how and why accounting and finance innovations have changed over time. This book will help practitioners and academics develop and introduce new accounting and finance tools and concepts. It is also a useful resource for those working in the accounting and finance fields.

There is ample evidence to suggest that Sri Lanka's climate has already changed. However, the bigger question of national importance is what Sri Lanka's climate will look like in 50 or 100 years and how prepared the country is to face such changes. This report reviews the status of climate change (CC) research/activities in Sri Lanka in terms of observed and projected climatic changes, their impacts on water resources and agriculture, CC mitigation and adaptation, and research needs. The study also developed a pilot level CC Vulnerability Index, which was subsequently mapped at district level. The maps indicate that typical farming districts such as Nuwara Eliya, Badulla, Moneragala, Ratnapura and Anuradhapura are the most vulnerable to CC due to their heavy reliance on primary agriculture.

This volume brings together advanced concepts from leading academic scientists, educationalists, administrative policymakers, and researchers on their experiences and results on many aspects of digital educational methods and teaching practices. It provides an interdisciplinary compilation of recent innovations, trends, and concerns as well as the challenges encountered and solutions adopted in the fields of digital pedagogies and educational design. It is becoming increasingly important to develop adaptive, robust, and digital teaching-learning mechanisms in academics. This volume addresses this need by discussing the advancements in flipped and blended learning, student- and teacher-centered learning in technical institutes, critical digital pedagogies, and the complex analyses and collaborations with organizations outside the academy. This book also deals with protocols, educational and administrative policies, IoT-based teaching-learning methodology, teaching education and the process of assessment, testing and evaluation, integration of technology in digital education, and different case study-based approaches in digital teaching-learning methodology.

The Landau Institute for Theoretical Physics was created in 1965 by a group of LD Landau's pupils. Very soon, it was widely recognized as one of the world's leading centers in theoretical physics. According to Science Magazine, the Institute in the eighties had the highest citation index among all the scientific organizations in the former Soviet Union. This collection of the best papers of the Institute reflects the development of the many directions in the exact sciences during the last 30 years. The reader can find the original formulations of well-known notions in condensed matter theory, quantum field theory, mathematical physics and astrophysics, which were introduced by members of the Landau Institute. The following are some of the achievements described in this book: monopoles (A Polyakov), instantons (A Belavin et al.), weak crystallization (S Brazovskii), spin superfluidity (I Fomin), finite band potentials (S Novikov) and paraconductivity (A Larkin, L Aslamasov). Contents: Condensed Matter: Phase Transition in Uniaxial Ferroelectrics (A I Larkin & D E Khmel'nitskii) Contribution to the Theory of Domain Structures (I A Privorotskii) Correlation Functions of a One-Dimensional Fermi System with Long-Range Interaction (Tomonaga Model) (I E Dzyaloshinskii & A I Larkin) Investigation of Singularities in Superfluid He³ in Liquid Crystals by the Homotopic Topology Methods (G E Volovik & V P Mineev) Towards an Exact Solution of the Anderson Model (P B Wiegmann) Long Wavelength Dynamics of Free Smectic Films (E I Kats & V V Lebedev) The Augmented Models of Associative Memory Asymmetric Interaction and Hierarchy of Patterns (M V Feigelman & L B Ioffe) Superconductivity Transition Temperature in Amorphous Film (A M Finkel'shtein) Mathematical Physics: A Scheme for Integration the Nonlinear Equations of Mathematical Physics by the Method of the Inverse Scattering Problem (V E Zakharov & A B Shabat) Note on the Integration of Euler's Equations of the Dynamics of an n-Dimensional Rigid Body (S V Manakov) Extension of the Module of Invertible Transformations. Classification of Integrable Systems (A V Mikhailov et al.) Field Theory and Nuclear Physics: Particle Spectrum in Quantum Field Theory (A M Polyakov) Pseudoparticle Solutions of the Yang-Mills Equations (A A Belavin et al.) Infinite Conformal Symmetry in Two-Dimensional Quantum Field Theory (A A Belavin et al.) Conformal Algebra and Multipoint Correlation Functions in 2d Statistical Models (V Dotsenko & V A Fateev) Higgs and Top Quark Masses in the Standard Model without Elementary Higgs Boson (V N Gribov) Astrophysics: Spectrum of Relict Gravitational Radiation and the Early State of the Universe (A A Starobinskii) and other papers Readership: Graduates and researchers in theoretical physics. keywords: "The articles reprinted in this volume are impressive. Many of these articles are still referenced, and even more are the basis for experimental and theoretical studies today." Mathematical Reviews "This collection of the best papers of the Institute reflects the development of the many directions in the exact sciences during the last 30 years. Encyclopedia of Renewable and Sustainable Materials provides a comprehensive overview, covering research and development on all aspects of renewable, recyclable and sustainable materials. The use of renewable and sustainable materials in building construction, the automotive sector, energy, textiles and others can create markets for agricultural products and additional revenue streams for farmers, as

well as significantly reduce carbon dioxide (CO₂) emissions, manufacturing energy requirements, manufacturing costs and waste. This book provides researchers, students and professionals in materials science and engineering with tactics and information as they face increasingly complex challenges around the development, selection and use of construction and manufacturing materials. Covers a broad range of topics not available elsewhere in one resource Arranged thematically for ease of navigation Discusses key features on processing, use, application and the environmental benefits of renewable and sustainable materials Contains a special focus on sustainability that will lead to the reduction of carbon emissions and enhance protection of the natural environment with regard to sustainable materials

This book constitutes the refereed and revised post-conference proceedings of the 8th International Workshop on Code-Based Cryptography, CBCrypto 2020, held in Zagreb, Croatia, in May 2020. The seven papers presented in this book were carefully reviewed and selected from numerous submissions. These contributions focus on various topics such as code-based cryptography, from design to implementation, security, new systems, and improved decoding algorithms. * The conference was held virtually due to the COVID-19 pandemic.*

The first book to offer a blueprint for overcoming the challenges to successfully quantifying biomarkers in living organisms The demand among scientists and clinicians for targeted quantitation experiments has experienced explosive growth in recent years. While there are a few books dedicated to bioanalysis and biomarkers in general, until now there were none devoted exclusively to addressing critical issues surrounding this area of intense research. Target Biomarker Quantitation by LC-MS provides a detailed blueprint for quantifying biomarkers in biological systems. It uses numerous real-world cases to exemplify key concepts, all of which were carefully selected and presented so as to allow the concepts they embody to be easily expanded to future applications, including new biomarker development. Target Biomarker Quantitation by LC-MS primarily focuses on the assay establishment for biomarker quantitation—a critical issue rarely treated in depth. It offers comprehensive coverage of three core areas of biomarker assay establishment: the relationship between the measured biomarkers and their intended usage; contemporary regulatory requirements for biomarker assays (a thorough understanding of which is essential to producing a successful and defensible submission); and the technical challenges of analyzing biomarkers produced inside a living organism or cell. Covers the theory of and applications for state-of-the-art mass spectrometry and chromatography and their applications in biomarker analysis Features real-life examples illustrating the challenges involved in target biomarker quantitation and the innovative approaches which have been used to overcome those challenges Addresses potential obstacles to obtain effective biomarker level and data interpretation, such as specificity establishment and sample collection Outlines a tiered approach and fit-for-purpose assay protocol for target biomarker quantitation Highlights

the current state of the biomarker regulatory environment and protocol standards
Target Biomarker Quantitation by LC-MS is a valuable resource for bioanalytical
scientists, drug metabolism and pharmacokinetics scientists, clinical scientists,
analytical chemists, and others for whom biomarker quantitation is an important tool of
the trade. It also functions as an excellent text for graduate courses in pharmaceutical,
biochemistry and chemistry.
