This book should be the first read for anyone interested in realizing the potential of integration.

Mass Casualty events may occur as a result of natural or human-caused disasters or after an act of terrorism. The planning and response to

disasters and  
catastrophes needs  
to take into

consideration the  
distinction between  
progressive and  
sudden events.

Insidious or slowly  
progressive

disasters produce a  
large number of  
victims but over a  
prolonged time  
period, with different

peaks in the severity  
of patients  
presenting to the  
hospital. For  
example, radiation  
events will produce  
a large number of  
victims who will  
present days,  
weeks, months, or  
years after  
exposure,  
depending on the  
dose of radiation

symptoms. On the other hand, in a sudden disaster, there is an abrupt surge of victims resulting from an event such as an explosion or a chemical release. After the sarin gas attack in a Tokyo subway in 1995, a total of 5500 victims were injured and

required medical attention at local hospitals immediately after the attack. The car bomb that exploded near the American Embassy in Nairobi, Kenya, killed 213 people and simultaneously produced 4044 injured patients, many requiring
