

## Occupational Therapy Practice Guidelines For Mental Health Promotion Prevention And Intervention For Children And Youth Aota Practice Guidelines Series

**Forlagets beskrivelse: Too often, older or disabled people live limited lives or give up their homes and neighborhoods prematurely because standard housing cannot meet their needs. Home modifications - or alterations, adjustments, or additions - to a home can help older or disabled people age in place and stay in their communities, which is often their preference. Occupational therapy plays a significant role in assessing needs, identifying and training in solutions, and evaluating outcomes in home modifications. This Practice Guideline serves as a reference for occupational therapists and occupational therapy assistants, as well as for designers, builders, social services providers, health care facility managers, managed care organizations, and health care regulators. It defines the contribution that occupational therapy can make to the home modification process through evaluation, consultation, and training with clients or consumers who need home modifications.**

**Practice guidelines plan an important role in promoting high-quality care. Occupational Therapy Practice Guidelines for Individuals With Work-Related Injuries and Illnesses gives occupational therapy practitioners, educators, and other health care professionals evidence-based guidance to care for workers who become hurt or ill on the job. These guidelines also provide an excellent reference for employers and state workers' compensation divisions in understanding the unique role of occupational therapy in rehabilitation of injured and ill workers. In 2007, American workers experienced 4 million work-related injuries and illnesses. Using concepts from the Occupational Therapy Practice Framework, this guideline helps prepare occupational therapy practitioners to assist this large population and details the assessment and treatment of people with work-related injuries, including planning for returning to work. A systematic literature review synthesizes extensive research, distilling the most important parts--treatment recommendations--through reader-friendly tables. Individual evidence tables present and summarize a wide range of literature on the low back; elbow; hand, wrist, and forearm; and shoulder and apply it to occupational therapy clinical practice. Useful appendixes also summarize ICD-9-CM and CPT codes related to occupational therapy injuries and illnesses.**

**Occupational Therapy Practice Guidelines for Adults with Alzheimer's Disease and Related Major Neurocognitive Disorders**

**Occupational Therapy Practice Guidelines for Children and Adolescents with Autism**

**Occupational Therapy Practice Guidelines for Attention-deficit/hyperactivity Disorders**

By 2030, nearly 20% of the U.S. population will be ages 65 or older, and the fastest growing segment among them will be people ages 85 or older. Individuals in this oldest age group have the highest rates of health care utilization, morbidity, and disability. To support productive aging and continued participation, older adults must remain engaged in their desired roles and routines, daily activities, and occupations. This Practice Guideline provides an overview of the occupational therapy process in productive aging, defining the domain and interventions that occur within acceptable practice. It provides evidence for interventions with IADLs, fall prevention and home modification, health management and maintenance, and occupational engagement and health outcomes. This Practice Guideline will help occupational therapists and occupational therapy assistants, as well as the individuals who manage, reimburse, or set policy regarding occupational therapy services, understand the contribution of occupational therapy services to facilitate productive aging for community-dwelling older adults.

The U.S. population is aging, and occupational therapy practitioners working with older adults must have the skills to address multiple health issues, including vision loss. Although typical aging does not cause low vision, four major causes of vision impairment are directly related to the aging process: (1) age-related macular degeneration (AMD), (2) diabetic retinopathy, (3) glaucoma, and (4) cataracts. Instances of these impairments are expected to double by the year 2050, making low vision a significant public health issue. This Practice Guideline includes occupational therapy assessment and intervention guidelines for older adults who have visual acuity impairments, visual field impairments, or both as a result of a low vision diagnosis. Screening, referral, and evaluation are covered for clients for central visual field impairments, such as AMD and cataract; peripheral field impairments, such as glaucoma, hemianopsia, and quadrantanopsia; and mixed visual field loss, such as diabetic retinopathy. This work can help occupational therapists and occupational therapy assistants, as well as individuals who manage, reimburse, or set policy regarding occupational therapy services, understand the contribution of occupational therapy to treating older adults with low vision. Appendixes include selected diagnostic and billing codes and evidence tables.

Occupational Therapy Practice Guidelines for Chronic Pain

Occupational Therapy Practice Guidelines for Adults with Low Vision

Ce document propose les lignes directrices pour l'intervention en ergothérapie auprès de jeunes enfants présentant des retards de développement. Il indique la définition, l'étiologie et l'incidence des retards de développement, les domaines à évaluer ainsi que les approches pour élaborer des plans d'intervention.

The leading cause of disability in the United States is serious mental illness, which poses political, economic, and social challenges. About 26% of American adults have a mental illness, and 6% have a serious mental illness. This population is the disability group least likely to be employed, with recent unemployment estimates ranging from 35% to 62%. This Practice Guideline provides an overview of the occupational therapy process for adults with serious mental illness, defining the domain and interventions that occur within acceptable practice. It provides evidence for intervention with schizophrenia, bipolar disorder, and major depression, as well as those related to education and supported education, work and supported employment, community living, health and wellness, and cognition.

Occupational Therapy Practice Guidelines for Adults with Stroke

The Framework, an official AOTA document, presents a summary of interrelated constructs that define and guide occupational therapy practice. The Framework was developed to articulate occupational therapy's contribution to promoting the health and participation of people, organizations, and populations through engagement in occupation. The revisions included in this second edition are intended to refine the document and include language and concepts relevant to current and emerging occupational therapy practice. Implicit within this summary are the profession's core beliefs in the positive relationship between occupation and health and its view of people as occupational beings. Numerous resource materials include a glossary, references and a bibliography, as well as a table of changes between the editions.

Comprehensive overview of the occupational therapy process for children and youths ages 3 to 21 with behavioral and psychosocial challenges. Defines the occupational therapy process and the nature, frequency, and duration of intervention that occurs within the boundaries of acceptable practice. Describes evidence-based practice and summarizes the evidence from the literature regarding best practices in activity-based intervention for this population. Appendixes contain common intervention approaches, the evidence-based literature review, and explanations of what occupational therapists and occupational therapy assistants do.

**Occupational Therapy and Stroke** guides newly qualified occupational therapists (and those new to the field of stroke management) through the complexities of treating people following stroke. It encourages and assists therapists to use their skills in problem solving, building on techniques taught and observed as an undergraduate. Written and edited by practising occupational therapists, the book acknowledges the variety of techniques that may be used in stroke management and the scope of the occupational therapist's role. Chapters span such key topics as early intervention and the theoretical underpinnings of stroke care, as well as the management of motor, sensory, cognitive and perceptual deficits. They are written in a user-friendly style and presented in a form that enables the therapist to review the subject prior to assessment and treatment planning. Complex problems are grouped together for greater clarity. This second edition has been fully revised and updated in line with the WHO ICF model, National Clinical Guidelines and Occupational Therapy standards. It is produced on behalf of the College of Occupational Therapists Specialist Section - Neurological Practice.

**Occupational Therapy Practice Guidelines for Children and Adolescents with Challenges in Sensory Processing and Sensory Integration**

Currently in the United States, 20% of children ages 6 years or younger live in poverty. Poor children have fewer opportunities than their peers to resources that are important for child development. At the same time, the prevalence of developmental disabilities has increased to 1 in every 6 children. Early identification of developmental delays is critical, and more than half of all American parents do not know the warning signs. Occupational therapy professionals in early intervention and preschool practice can provide the necessary services to support children's health in early childhood. This Practice Guideline explains the occupational therapy process for young children--and their families, caregivers, and teachers--which includes evaluation, intervention, and outcomes planning to enhance a child's occupational performance, adaptation, health and wellness, community participation, role competence, and self-advocacy. Topics include social-emotional development; feeding, eating, and swallowing; cognitive and motor development; service delivery; autism; obesity, cerebral palsy; and parent training. This work can help occupational therapy practitioners, as well as those who manage, reimburse, or set policy regarding occupational therapy services, understand the contribution of occupational therapy in evaluating and serving young children. This guideline can also serve as a resource for parents, school administrators, educators, and other early childhood staff.

Of the estimated 70 million children in the United States, 6 million to 9 million have a serious emotional disturbance. However, only 1 in 5 of these children receives any professional help. Over the years, the view of children's mental health services has changed. This new thinking has altered how occupational therapy services are perceived and implemented. In addition to providing services to children diagnosed with a mental illness, occupational therapy professionals can help children develop and maintain mental health in school, community, and mental health settings. Using an evidence-based perspective and public health model, this Practice Guideline provides an overview of the occupational therapy process for mental health promotion, prevention, and intervention for children ages 3 to 21 years. It defines the occupational therapy domain, process, and interventions that occur within the boundaries of acceptable practice with this underserved population. Interventions include those for promotion, prevention, and intensive individualized care on topics such as social skills, health promotion, play/recreation/leisure, and cognitive-behavioral therapy.

**Occupational Therapy Practice Guidelines for Productive Aging for Community-dwelling Older Adults**

**Domain & Process**

**Occupational Therapy Practice Guidelines for Adults with Spinal Cord Injury**

**Occupational Therapy Practice Guidelines for Adults with Neurodegenerative Diseases**

*Occupational therapy is steeped in the sciences that provide knowledge and understanding of human development and function and the variables that influence these aspects of human life. The registration, processing, and integration of sensory information can both support and inhibit the ability for children and adolescents to function in their environment. Up to 15% of school-age children are believed to have sensory challenges, and at least 40% of individuals with developmental disabilities and 80% of those with autism are affected. Using an evidence-based perspective and key concepts from the Occupational Therapy Practice Framework: Domain and Process, this new AOTA Practice Guideline provides an overview and insight into occupational therapy evaluation and intervention for youth that experience sensory information difficulties. Designed primarily for clinical practitioners, this important practice guideline from AOTA Press is a vital reference for occupational therapy students and educators and provides a clear definition on the role of occupational therapy services for policymakers and other health care professionals who work with children and adolescents that face these challenges.*

*Practice guideline are important tools for promoting the highest quality of care. This practice guideline gives occupational therapy practitioners, educators, and health care professionals an evidence-based guideline for providing the best, most appropriate care for adults with Alzheimer's disease and related disorders as well as their caregivers. Of the numerous types of dementia, some are rare, while others are reaching alarming proportions. The most prevalent is Alzheimer's disease, with 1 in 85 individuals predicted to have the disease by 2050, for a total of 107 million people globally. As the disease currently is progressive and ultimately fatal, there are major challenges not only for the individuals affected but also for their families and communities. This Practice Guideline reviews the symptoms, stages, and pharmacology as well as gives a detailed description of the occupational therapy process for various approaches and interventions. Appendixes include selected CPTTM and ICD-9-CM codes, as well as driving and community mobility issues for people with Alzheimer's disease.*

*Occupational Therapy and Stroke*

*Occupational Therapy Practice Guidelines for Adults with Carpal Tunnel Syndrome*

*Occupational Therapy Practice Guidelines for Young Children with Delayed Development*

Practice guidelines have been widely developed in response to the health care reform movement. They can be a useful tool for improving the quality of health care, enhancing consumer satisfaction, promoting appropriate use of services, and reducing costs. Using an evidence-based perspective and key concepts from the Occupational Therapy Practice Framework, this guideline provides an overview of the occupational therapy process for children and adolescents with autism spectrum disorders (ASD), the prevalence of which is increasing rapidly in the United States. It defines the occupational therapy domain, process, and interventions--including sensory integration and sensory-based interventions, relationship-based interventions, school-based programs, social skills interventions, and comprehensive behavioral interventions--that occur within the boundaries of acceptable practice.
