Looking at Trauma: A Tool Kit for Clinicians is an easy-to-use, engaging resource designed to address the challenges health care professionals face in providing much-needed trauma psychoeducation to clients with histories of childhood trauma. Developed by trauma therapists Abby

Hershler and Lesley Hughes in collaboration with artist Patricia Nguyen and biomedical communications specialist Shelley Wall, this book presents twelve trauma treatment models accompanied by innovative and engaging comics. The models help clinicians provide practical information about the impacts of trauma to their clients—and support those clients in understanding and managing their distressing symptoms. Topics covered include complex posttraumatic stress disorder, emotion regulation, memory, relationship patterns, and self-care. Each chapter features step-by-step instructions on how to use the treatment models with clients; practical educational tips from experienced clinicians in the field of childhood trauma; interactive trauma education comics; a foundational framework focused on care for the provider; and references for further study. Intended for use in therapeutic, clinical, and classroom settings, this book is a valuable resource for all healthcare workers. In particular, social workers, psychotherapists, spiritual care providers, nurses, occupational therapists, psychologists, primary care physicians, and psychiatrists will find this tool kit indispensable.

The Knowledge Translation Toolkit provides a thorough overview of what knowledge translation (KT) is and how to use it most effectively to bridge the “know–do” gap between research, policy, practice, and people. It presents the theories, tools, and strategies required to encourage and enable evidence-informed decision-making. Drawing from the experience of specialists in relevant disciplines around the world, this toolkit builds upon extensive research into the principles and skills of KT: its theory and literature, its evolution, strategies, and challenges. The book covers an array of crucial KT enablers—from context mapping to evaluative thinking—supported by practical examples, implementation guides, and references.

Occupational therapists require skills to access the daily living skills of their clients. This book uses a transactional approach to examine the home environment and the client. Current and future needs are assessed and this book addresses concerns and suggests solutions which will assist in helping the client remain in their own home.

The Framework, an official AOTA document, presents a summary of interrelated constructs that define and guide occupational therapy practice. The Framework was developed to articulate occupational therapy's contribution to promoting the health and participation of people, organizations, and populations through engagement in occupation. The revisions included in this second edition are intended to refine the document and include language and concepts relevant to current and emerging occupational therapy practice. Implicit within this summary are the profession's core beliefs in the positive relationship between occupation and health and its view of people as occupational beings. Numerous resource materials include a glossary, references and a bibliography, as well as a table of changes between the editions.
