***As Information Management put it, "On the strength of its currency and coverage alone, Franks' book is poised to take over as the recommended go-to reference for both students and RIM professionals for many years to come." The new second edition cements this work's status as an up-to-date classic, its content updated and expanded to address emerging technologies, most notably blockchain, and evolving standards and practices. Inside, Franks presents complete coverage of the records and information lifecycle model, encompassing paper, electronic (databases, office suites, email), and new media records (blogs, chat messages, and software as a service). Informed by an advisory board of experts in the field and with contributions by noted authorities, the text addresses such key topics as the origins and development of records and information; the discipline of information governance and developing a strategic records management plan; creation/capture and classification; retention strategies, inactive records management, archives, and long-term preservation; access, storage, and retrieval; electronic records and electronic records management systems; the latest on rapidly evolving technologies such as web records, social media, and mobile devices; vital records, disaster***

**Implementing Electronic Document and Record Management Systems** explains how to efficiently store and access electronic documents and records in a manner that allows quick and efficient access to information so an organization may meet the needs of its clients. The book addresses a host of issues related to electronic document and records management systems (EDRMS). From starting the project to systems administration, it details every aspect in relation to implementation and management processes. The text also explains managing cultural changes and business process re-engineering that organizations undergo as they switch from paper-based records to electronic documents. It offers case studies that examine how various organizations across the globe have implemented EDRMS. While the task of creating and employing an EDRMS may seem daunting at best, **Implementing Electronic Document and Record Management Systems** is the resource that can provide you with the direction and guidance you need to make the transition as seamless as possible.

This book draws on both traditional and emerging fields of study to consider what a grounded definition of quantitative and qualitative research in the Digital Humanities (DH) might mean; which areas DH can fruitfully draw on in order to foster and develop that understanding; where we can see those methods applied; and what the future directions of research methods in Digital Humanities might look like. Schuster and Dunn map a wide-ranging DH research methodology by drawing on both 'traditional' fields of DH study such as text, historical sources, museums and manuscripts, and innovative areas in research production, such as knowledge and technology, digital culture and society and history of network technologies. Featuring global contributions from scholars in the United Kingdom, the United States, Europe and Australia, this book draws together a range of disciplinary perspectives to explore the exciting developments offered by this fast-evolving field. Open Mathematical Documents (OMDoc) is a content markup scheme for mathematical documents including articles, textbooks, interactive books, and courses. OMDoc also serves as the content language for agent communication of mathematical services and a mathematical software bus. This book documents OMDoc version 1.2, the final and mature release of OMDoc 1. The system has been validated in varied applications, and features modularized language design, OPENMATH and MATHML for the representation of mathematical objects.

The computer-assisted tools, methodologies, and structures through which those in the arts and humanities pursue their disciplines-the humanities "mind technologies"-have come increasingly to the forefront in recent years. Arising in part from recent meetings between the Consortium for Computing in the Humanities (COCH/COSH) and the Social Sciences and Humanities Research Council of Canada (SSHRC), this volume is the first to document the internationally significant work of the Canadian academic community in this area.

*You wrote a book. Very nice. But you didn't write to keep it for you. You should publish it. The problem is that the publishers charge high prices for some authors pockets, and do it objectively, due to the high cost of printing. But you allowed that luxury, and now you have a printed book, with you as the author. You can keep hundreds or thousands of volumes in your personal library and give it as a gift to your friends in special occasions, or try to distribute in various libraries. You managed to distribute it, the book is beautifully placed in shelves. In time, dust is spread on covers. After a while, the book is withdrawn. It remains to use it as decoration at home, or support for various household items. But lucky for you, there is an alternative, cheaper and more effective, in selling your book: e-Books! e-Book and online publishing market has evolved rapidly in recent years, and a lot of companies have entered this market, as publishers, online bookstores, or promoting e-books.*

*This book brings together many of the worlds leading open access experts to provide an analysis of the key strategic, technical and economic aspects on the topic of open access. Open access to research papers is perhaps a defining debate for publishers, librarians, university managers and many researchers within the international academic community.*

*Starting with a description of the current situation and its shortcomings, this book then defines the varieties of open access and addresses some of the many misunderstandings to which the term sometimes gives rise. There are chapters on the technologies involved, researchers, perspectives, and the business models of key players. These issues are then illustrated in a series of case studies from around the world, including the USA, UK, Netherlands, Australia and India. Open access is a far-reaching shift in scholarly communication, and the book concludes by going beyond today's debate and looking at the kind of research world that would be possible with open access to research outputs. Chapters by leading experts in the field, including Professor Jean-Claude Guéhen, Clifford Lynch, Stevan Harnad, Peter Suber, Charles Bailey, Jr., Alma Swan, Fred Friend, John Shipp and Leo Waaijers Discussion of open access from a wide range of perspectives Country case studies, summarising open access in the USA, UK Netherlands, Australia and India*
