About the Author Darron Clark, OCP, PMP Recommendations Great Results, Personable, Expert "Having just passed his Oracle 10g Certified Master (OCM) (an extremely rare qualification indeed ), Darron taught me the 10g Real Application Clusters class. Without exaggeration, I can state that Darron's RAC class was orders of magnitude better than any other IT class that I have taken, and that it was because of his superior knowledge of the subject. I have made this comment about Darron numerous times to my DBA colleagues ever since I sat his class. Darron's Oracle knowledge is encyclopedic. He can answer not only any question about RAC, but also about any other aspect of Oracle, both in new technology areas, such as ASM, and the fundamentals, such as SQL\*Net, memory, and PL/SQL. Every participant in his RAC class responded positively to his easy-going teaching style, which is a positive leadership trait. Finally, the significance of the OCM cannot be overstated. It means that Darron passed a high-pressure, two-day, hands-on lab examination that covers the full depth and breadth of the Oracle product, including performance tuning, data warehousing, RAC, Data Guard, and other advanced subjects. A very low percentage of the candidates who take the OCM manage to pass it. His OCM is a true sign of Darron's Oracle technical expertise." January 6, 2009 Great Results, Expert, High Integrity "Darron is one of the smartest and most personable (can you say that about a DBA?) DBA's that I have ever worked with. He is technically very good at what he does, is trustworthy, reliable, and, while he worked with us, represented himself and the company extremely well. One of the most remarkable things about him is his ability to network, and he truly wants to help others -- in today's world, where most are out for me, myself and I, that's a great quality to possess. He will continue to touch and help make the organization better even after he's gone. You can't say that about a lot of people working out there any more " June 16, 2009*

In today's competitive marketplace with its focus on profit, maintaining integrity can often be a challenge. Further complicating this challenge is the fact that those assigned to the task of assuring accountability within an organization often have little, if any, visibility into the inner workings of that organization. Oracle Identity Management: Governance, Risk, and Compliance Architecture is the definitive guide for corporate stewards who are struggling with the challenge of meeting regulatory compliance pressures while embarking on the path of process and system remediation. The text is written by Marlin Pohlman, a director with Oracle who is recognized as one of the primary educators worldwide on identity management, regulatory compliance, and corporate governance. In the book's first chapters, Dr. Pohlman examines multinational regulations and delves into the nature of governance, risk, and compliance. He also cites common standards, illustrating a number of well-known compliance frameworks. He then focuses on specific software components that will enable secure business operations. To complete the picture, he discusses elements of the Oracle architecture, which permit reporting essential to the regulatory compliance process, and the vaulting solutions and data hubs, which collect, enforce, and store policy information. Examining case studies from the five most regulated business verticals, financial services, retail, pharma-life sciences, higher education, and the US public sector, this work teaches corporation stewards how to: Attain and maintain high levels of integrity Eliminate redundancy and excessive expense in identity management Map solutions directly to region and legislation Hold providers accountable for contracted services Identity management is the first line of defense in the corporate internal ecosystem. Reconcilingtheory and practicality, this volume makes sure that defense is workable, responsive, and effective.

Identity management is the concept of providing a unifying interface to manage all aspects related to individuals and their interactions with the business. It is the process that enables business initiatives by efficiently managing the user life cycle (including identity/resource provisioning for people (users)), and by integrating it into the required business processes. Identity management encompasses all the data and processes related to the representation of an individual involved in electronic transactions.

This IBM® Redbooks® publication provides an approach for designing an identity management solution with IBM Tivoli® Identity Manager Version 5.1. Starting from the high-level, organizational viewpoint, we show how to define user registration and maintenance processes using the self-registration and self-care interfaces as well as the delegated administration capabilities. Using the integrated workflow, we automate the submission/approval processes for identity management requests, and with the automated user provisioning, we take workflow output and automatically implement the administrative requests on the environment with no administrative intervention. This book is a valuable resource for security administrators and architects who wish to understand and implement a centralized identity management and security infrastructure.
