Advice geared to contemporary living on correct behavior in a wide variety of situations.

Full of action, romance, betrayal, passion, violence, and tragedy, the timeless ancient Greek and Roman myths make great reading. With a cast of unique characters and unbelievable story lines, classical mythology explains phenomena such as creation, weather, nature, and the universe with unparalleled drama. The Everything Classical Mythology Book is an entertaining and educational guide that explains all the great myths and explores how they have influenced language, art, music, psychology, and even today's popular culture. The book tells the fascinating stories of the gods' rise to power on Mount Olympus and of their frequent clashes with larger-than-life heroes. Rounded out with a helpful glossary, an index of characters, and many reading resources, this action-packed new addition to the Everything series brings classical mythology to life!

"Nurses play a vital role in improving the safety and quality of patient care -- not only in the hospital or ambulatory treatment facility, but also of community-based care and the care performed by family members. Nurses need know what proven techniques and interventions they can use to enhance patient outcomes. To address this need, the Agency for Healthcare Research and Quality (AHRQ), with additional funding from the Robert Wood Johnson Foundation, has prepared this comprehensive, 1,400-page, handbook for nurses on patient safety and quality -- Patient Safety and Quality: An Evidence-Based Handbook for Nurses. (AHRQ Publication No. 08-0043).*"--Online AHRQ blurb, http://www.ahrq.gov/qual/nursesdbk.

Effective Mooring

The Poems of Exile

International Medical Guide for Ships, Third Edition

Mooring is one of the most complex and dangerous operations for ship and terminal crew. If something goes wrong, the consequences can be severe. Effective Mooring gives crew a general introduction to mooring and guidance on how to stay safe during mooring operations. It is written in an easy-to-understand style for seafarers worldwide and can be used as a training guide for both new and experienced crew. Produced by the Oil Companies International Marine Forum (OCIMF), the book is written for crew on board oil tankers, barges and terminals, but the principles can be applied to any vessel.

Bridging the fields of conservation, art history, and museum curating, this volume contains the principal papers from an international symposium titled "Historical Painting Techniques, Materials, and Studio Practice" at the University of Leiden in Amsterdam, Netherlands, from June 26 to 29, 1995. The symposium--designed for art historians, conservators, conservation scientists, and museum curators worldwide--was organized by the Department of Art History at the University of Leiden and the Art History Department of the Central Research Laboratory for Objects of Art and Science in Amsterdam. Twenty-five contributors representing museums and conservation institutions throughout the world provide recent research on historical painting techniques, including wall painting and polychrome sculpture. Topics cover the latest art historical research and scientific analyses of original techniques and materials, as well as historical sources, such as medieval treatises and descriptions of painting techniques in historical literature. Chapters include the painting methods of Rembrandt and Vermeer, Dutch 17th-century landscape painting, wall paintings in English churches, Chinese paintings on paper and canvas, and Tibetan thangkas. Color plates and black-and-white photographs illustrate works from the Middle Ages to the 20th century.

For the United States, full involvement in World War II began and ended in the Pacific Ocean. Although the accepted grand strategy of the war was the defeat of Germany first, the sweep of Japanese victory in the weeks and months after Pearl Harbor impelled the United States to move as rapidly as it could to stem the enemy tide of conquest in the Pacific. Shocked as they were by the initial attack, the American people were also united in their determination to defeat Japan, and the Pacific war became peculiarly their own affair. In this great theater it was the United States that ran the war, and had the determining voice in answering questions of strategy and command as they arose. The natural environment made the prosecution of war in the Pacific of necessity an interservice effort, and any real account of it must, as this work does, take into full account the views and actions of the Navy as well as those of the Army and its Air Forces. These are the factors--a predominantly American theater of war covering nearly one-third the globe, and a joint conduct of war by land, sea, and air on the largest scale in American history--that make this volume on the Pacific war of particular significance today. It is the capstone of the eleven volumes published or being published in the Army's World War II series that deal with military operations in the Pacific area, and it is one that should command wide attention from the thoughtful public as well as the military reader in these days of global tension.

A Best Practice Guide for Offshore Vessel Operators

Commentaries on the Laws of England

OCIMF's Offshore Vessel Management and Self Assessment (OVMSA) programme has been developed as a tool to help operators of offshore vessels to assess, measure and improve their management systems. In this guide, the range of different offshore vessels and units are commonly referred to as 'vessels'. The conviction that Nature was God's second revelation played a crucial role in early modern Dutch culture. This book offers a fascinating account on how Dutch intellectuals contemplated, investigated, represented and collected natural objects, and how the notion of the 'Book of Nature' was transformed.

When first published, Marshall McLuhan's Understanding Media made history with its radical view of the effects of electronic communications upon man and life in the twentieth century.

This book (hardcover) is part of the TREDITION CLASSICS. It contains classical literature works from over two thousand years. Most of these titles have been out of print and off the bookstore shelves for decades. The book series is intended to preserve the cultural legacy and to promote the timeless works of classical literature. Readers of a TREDITION CLASSICS book support the mission to save many of the amazing works of world literature from oblivion. With this series, tredition intends to make thousands of international literature classics available in printed format again - worldwide.

"This is no small achievement. For the language-lover the translation provides elegant, flowing English verse, for the classicist it conveys close approximation to the Latin meaning coupled with a sense of the movement and rhythmic variety of Ovid's language"—Geraldine Herbet-Brown, editor of Ovid's Fasti: Historical Readings at Its Bicmillennium "This book fills a gap. There is no similar annotated English translation of Ovid's exile poetry. Thoroughly grounded in Ovidian scholarship, Green's introduction and notes are helpful and informative. The translation is accurate, idiomatic, and lively, closely imitating the Latin elegiac couplet and capturing Ovid's changing moods."—Karl Galinsky, author of Ovid's Metamorphoses: An Introduction to the Basic Aspects

The content of this book is the letter. Top Secret interview transcripts and personal notes received from the late Malilda O'Donnell MacElroy, an Army Air Force nurse who stationed at the Roswell Army Air Field 509th Bomb Group.Her letter asserts that this material is based on a series of interviews she conducted with an extraterrestrial being as part of her official duty as a nurse in the U.S. Army Air Force. During July and August she interviewed a saucer pilot who crashed near Roswell, New Mexico on July 8th, 1947. The being identified itself as an officer, pilot and engineer of The Domain Expeditionary Force, a race of beings who are using the asteroid belt in our solar system as a intergalactic base of operations.

Obviously directed at Air Force readers, Colonel Timmons's book - because of its aphoristic, anecdotal, concrete approach - will speak to readers in other services and in many civilian organizations and institutions as well. Shelves in the nation's bookstores today are groaning under the weight of " how-to" leadership books purporting to reveal the secrets of how to succeed in one career or another. Most do not last. Only a few stand the test of time; this promises to be one of them.Lieutenant General Bradley C. Hosmer, United States Air ForceSuperintendent, United States Air Force Academy

This present Code has been developed for the design, construction and operation of offshore support vessels (OSVs) which transport hazardous and noxious liquid substances in bulk for the servicing and resupplying of offshore platforms, mobile offshore drilling units and other offshore installations, including those employed in the search for and recovery of hydrocarbons from the seabed. The basic philosophy of the present Code is to apply standards contained in the Code and the International Code or the Construction and Equipment of Ships Carrying Dangerous Chemicals in Bulk (IBC Code) and in the International Code for the Construction and Equipment of Ships Carrying Liquefied Gases in Bulk (IGC Code) to the extent that is practicable and reasonable taking into account the unique design features and service characteristics of OSVs.

This extract from Ovid's 'Theban History' recounts the confrontation of Pentheus, king of Thebes, with his divine cousin, Bacchus, the god of wine. Notwithstanding the warnings of the seer Tiresias and the cautionary tale of a character Acetes (perhaps Bacchus in disguise), who tells of how the god once transformed a group of blasphemous sailors into dolphins, Pentheus refuses to acknowledge the divinity of Bacchus or allow his worship at Thebes. Enraged, yet curious to witness the orgiastic rites of the nascent cult, Pentheus conceals himself in a grove on Mt. Cithaeron near the locus of the ceremonies. But in the course of the rites he is spotted by the female participants who rush upon him in a delusional frenzy, his mother and sisters in the vanguard, and tear him limb from limb. The episode abounds in themes of abiding interest, not least the clash between the authoritarian personality of Pentheus, who embodies 'law and order', masculine prowess, and the martial ethos of his city, and Bacchus, a somewhat effeminate god of orgiastic excess, who reveals in the delusional and the deceptive, the transgression of boundaries, and the blurring of gender distinctions. This course book offers a wide-ranging introduction, the original Latin text, study aids with vocabulary, and an extensive commentary. Designed to stretch and stimulate readers, Gildenhard and Zissos's incisive commentary will be of particular interest to students of Latin at AS and undergraduate level. It extends beyond detailed linguistic analysis to encourage critical engagement with Ovid's poetry and discussion of the most recent scholarly thought.

Exploring Partnership Governance in Global Health

Tristia Book I.

Alien Interview

Ship management has constantly had to evolve to take into account the advancements in technology as well as the demands of the shipping industry. Having internet access and email on board ship has meant that the ship manager has to possess certain sets of skills to function effectively in the post, including computer literacy. The emergence of large multi-national ship management companies has also changed how business is conducted and this is turn means that the ship manager and tiers of management within the organization have had to cope with the demands of working with a multi-national workforce. Furthermore, since the mid-1980s there has been an ever expanding raft of legislation that is more restrictive for companies to meet, and a shrinking of profit margins has seen a shift in how companies are required to operate to survive. This book addresses the demands of 21st century ship management with the focus of the book as much about the people who manage ships as about the theory and practice of ship management.

Solving the world's health challenges requires multidisciplinary collaborations that bring together the talents, experiences, resources, and ideas from multiple sectors. These collaborations in global health frequently occur through publicâ€private partnerships (PPPs) in which public and private parties share risks, responsibilities, and decision-making processes with the objective of collectively and more effectively addressing a common goal. However, these numerous stakeholders bring varying strengths and resources to global health partnerships, but they also bring their own organizational cultures, regulations, and expectations. Managing partnerships among them is complex and requires intentional and thoughtful governance. Over the last several decades, as the number of interested stakeholders, resources invested, and initiatives launched within the global health field has grown, effective governance of global health PPPs has become increasingly critical. To explore the role of governance in PPPs for global health, the Forum on Publicâ€Private Partnerships for Global Health and Safety convened a workshop. Participants explored best practices, common challenges, and lessons learned in the varying approaches to partnership governance. They also highlighted key issues in the governance of PPPs for global health with the goal of increasing their effectiveness in improving health outcomes. This publication summarizes the presentations and discussions from the workshop.

"Jeffry Smith updates the earlier release of Col Timothy T. Timmon's Commanding an Air Force Squadron (1993). In this book, which includes a foreword by Gen John P. Jumper and an introduction by Colonel Timmons, USAF, retired, Colonel Smith relies on the vast "insights, experiences, and recommendations" of former and current commanders to identify the attributes of a successful commander at multiple levels. He identifies some issues commanders face regardless of the level of command, including counseling personnel, dorm inspections, commanders' calls, money management, and the roles of spouses and families. According to Colonel Smith, the conduct of individuals in times of crises is the truest barometer of a good commander."--Publisher website.

Fully updated and revised to take into account the new BIMCO Suppltyime 2017 contract with a detailed analysis of the changes since the Suppltyime 2005 form and including a new analysis, for the first time, of the BIMCO Bargehire form, this is the only modern work on the law of towage and offshore vessel services. It gives a comprehensive and extensively researched account of the general law coupled with a detailed clause-by-clause commentary and analysis of all of the major standard contracts used in the international offshore, towage and heavylift sectors, comprising the BIMCO Towcon, Towhire, Suppltyime and Heavylift forms, the full suite of BIMCO Wreck Removal forms and, now, also the BIMCO Bargehire form, as well as the ISU Salvcon and Salvhire forms. The Law of Tug and Tow and Offshore Contracts has rapidly established itself as a leading text and is written by, Simon Rainey QC, one of the foremost shipping practitioners with unrivalled experience in the field. Key reasons to buy The Law of Tug and Tow and Offshore Contracts, Fourth Edition • the only clause-by-clause commentary on all of the major standard form contracts used by the offshore industry • the only in-depth analysis of the drafting history of the BIMCO standard form offshore contracts, comparing the recent amended versions in their drafting context; • the only authoritative analysis of the case law and arbitration decisions affecting the towage and offshore industries • written from the perspective of a leading practitioner with unrivalled practical experience over many years of the contract forms and of the issues which arise under them (many of which are unreported) and involved in almost all of the leading cases and arbitrations in the field • written with an eye on the practicalities of how the contracts work given the everyday problems which arise in the industry, with guidance where the standard forms may require amendment

Héritière des mouvements de territorialisation et de régionalisation de la gouvernance des espaces et des activités maritimes, l'Union européenne s'est érigée, malgré le silence des traités constitutionnels, en nouvel échelon d'élaboration du droit de la sécurité maritime. Les enjeux humains, économiques et environnementaux de la problématique ont fait de son ordre juridique un théâtre privilégié de la confrontation entre les traditions libérales du monde maritime et le besoin d'une régulation par la puissance publique en vue de prévenir, limiter et indemniser les préjudices de toutes natures pouvant résulter d'un accident en mer. Si elle se fait parfois au prix d'un alignement sur les pratiques internationales, l'harmonisation progressive du droit de la sécurité maritime à l'échelle continentale limite la compétition législative que les Etats membres sont susceptibles de se livrer dans l'exercice de l'autorité du pavillon et de l'autorité du port. Afin d'assurer l'effectivité de son action en la matière, l'Union européenne organise le rapprochement des administrations maritimes nationales, dont la coopération opérationnelle est orchestrée par des agences décentralisées. Pour dépasser les limites auxquelles se heurte nécessairement une approche continentale, l'Union européenne multiplie les partenariats internationaux et défend à présent une approche différenciée par bassin. La singularisation par rapport au droit international de référence demeure quant à elle stratégiquement limitée, alors que l'attractivité commerciale de l'Europe autoriserait une stratégie d'incitation économique plus audacieuse. Cet ouvrage dresse un bilan de l'action de l'Union européenne dans le domaine de la sécurité maritime. Il en identifie les fondements, les accomplissements et les limites, et suggère quelques pistes pour l'avenir. Il se destine aussi bien aux chercheurs qu'aux acteurs publics et privés concernés par la sécurité maritime (administrations nationales et européennes, armateurs, sociétés de classification, assureurs et mutuelles d'indemnisation, chantiers navals, cabinets d'avocats, représentants d'intérêt et groupes d'influence, etc.).

Artificial intelligence (AI) is a field within computer science that is attempting to build enhanced intelligence into computer systems. This book traces the history of the subject, from the early dreams of eighteenth-century (and earlier) pioneers to the more successful work of today's AI engineers. AI is becoming more and more a part of everyone's life. The technology is already embedded in face-recognizing cameras, speech-recognition software, Internet search engines, and health-care robots, among other applications. The book's many diagrams and easy-to-understand descriptions of AI programs will help the casual reader gain an understanding of how these and other AI systems actually work. Its thorough (but unobtrusive) end-of-chapter notes containing citations to important source materials will be of great use to AI scholars and researchers. This book promises to be the definitive history of a field that has captivated the imaginations of scientists, philosophers, and writers for centuries.

Within the last fifty years the performance requirements for technical objects and systems were supplemented with: customer expectations (quality), abilities to prevent the loss of the object properties in operation time (reliability and maintainability), protection against the effects of undesirable events (safety and security) and the ability to
