**'The Hitchhiker's Guide to Going Wireless' quickly established itself as the essential guide to mobile technology in South Africa. Going Mobile starts where Wireless left off and shows how the vision for the future is becoming a reality today. Wireless talked about the future high-speed wireless technology called WiMax, and already WiMax services are being offered commercially. The future is rushing up on us so fast that the time for a new edition of the Hitchhiker's Guide is now. As in Wireless, we ask the critical questions: What does it all mean? Where is it all going? How do ordinary people tap into this communication revolution? Here is a guide that once again catches the wave of interest and activity, that taps into the buzz, and also sets the mobile agenda for ordinary people and businesses throughout South Africa.**

Digital Development in Korea explores the role of digital information and communications technology in South Korea's development, starting with and building upon the crucial developments of the 1980s. Its perspective draws on the information society concept and on a conceptual model of strategic restructuring of telecommunications. It also draws on firsthand experience in formulating and implementing policies. The

analysis identifies aspects of the Korean experience from which developing countries around the world might benefit. Oh and Larson describe the revolutionary developments of the 1980s including the TDX electronic switching system, a major surge forward in semiconductors, the start of privatization and color television and the thoroughgoing restructuring of Korea's telecommunications sector. They further explore government leadership, the growing private sector and international trade pressures in the diffusion of broadband, mobile communication, and convergence toward a ubiquitous network society. The role of education in these developments is explored in detail, along with both the positive and negative aspects of Korea's vibrant new digital media. The book also looks at Korea's growing international involvement, its role in efforts to build a world information society, and finally, its future place in cyberspace. This book will be of interest to students, scholars and policy makers interested in communications technologies, Asian/Korean Studies and development studies.

OpenGL ES 2.0 is the industry's leading software interface and graphics library for rendering sophisticated 3D graphics on handheld and embedded devices. With OpenGL ES 2.0, the full programmability of shaders is now available on small and portable devices—including cell phones, PDAs, consoles, appliances, and vehicles. However, OpenGL ES differs significantly from OpenGL. Graphics programmers and mobile developers have had very little information about it—until now. In the OpenGL® ES 2.0 Programming Guide , three leading authorities on the Open GL ES 2.0 interface—including the specification's editor—provide start-to-finish guidance for maximizing the interface's value in a wide range of high-performance applications. The authors cover the entire API, including Khronos-ratified extensions. Using detailed C-based code examples, they demonstrate how to set up and program every aspect of the graphics pipeline. You'll move from introductory techniques all the way to advanced per-pixel lighting, particle systems, and performance optimization. Coverage includes: Shaders in depth: creating shader objects, compiling shaders, checking for compile errors, attaching shader objects to program objects, and linking final program objects The OpenGL ES Shading Language: variables, types, constructors, structures, arrays, attributes, uniforms, varyings, precision qualifiers, and invariance Inputting geometry into the graphics pipeline, and assembling geometry into primitives Vertex shaders, their special variables, and their use in per-vertex lighting, skinning, and other applications Using fragment shaders—including examples of multitexturing, fog, alpha test, and user clip planes Fragment operations: scissor test, stencil test, depth test, multisampling, blending, and dithering Advanced rendering: per-pixel lighting with normal maps, environment mapping, particle systems, image post-processing, and projective texturing Real-world programming challenges: platform diversity, C++ portability, OpenKODE, and platform-specific shader binaries

The only thing hotter than Warunga-the town was the desert beyond and the mood at Girdle's Community Hall on disappointment night. 50 degrees-in-the-shade and hope was dying along with the water table, the livestock and the energy supply. Warunga had been HUNG OUT TO DRY by the Government and it's 1200 residents were cooking dirt for dinner. This is a story with plenty of heroes. Mayor Harry Turnhill was a calm and thoughtful man who hated lazy Government as much as he hated Big Energy and killing time in Vietnam. Chantelle Ugnomundungra hated men who drank and did something about it. . . Inspector Boris Broad wanted a clean environmentally friendly Gold Coast Police Service . . . Claudia Nirvana was pure heart and ice as she moped up extraction executives like cow-cakes . . and so it goes . . As a man falls 16 stories through a Surfers Paradise atrium window in a do-nothing 4 star - a greed-cell in London's financial square mile goes after Warunga. Settle back for a gripping intermesh of humour and suspense and the advent of environmental war.

I don't consider myself the sharpest knife in the drawer, but I'm certainly not a spoon. I think about things. I put human nature under a microscope. Sometimes to my own peril. And I write about it. And politics, science, cosmology, relationships, sex, coffee, my angst, my weirdness, my cats & anything else that pops or chaps. But I think you will often find me quite humorous. Especially if you like sarcasm.Unless you're just blithely cruising through life, you'll notice there's a lot going on in this macrocosm of existence. This means there's a lot going on the microcosm of my brain. Not that there's anything "micro" about my brain. Anyway-here is a collection in which I share my thoughts, ruminations, suggestions, complaints and epiphanies where these "cosmsn" are concerned. Wear a helmet.
