This book is a complete guide to build a beautiful model boat that can sail without burning fuel, without electric power, and without wind blow. The boat can achieve maximum speed about 23 centimeters per second, about 9 inches per second, which is fast enough for a toy boat. The boat is very simple, nothing complicated moving parts inside the boat to propel it. The boat

is very easy to be crafted by using household materials and can be done by 10 years old kid. The basic principles that support the boat performance is state of the art technology. Therefore, this book is a good education for kids or adults who would like to learn about boat technology. Some boat designs are tested to find the best performance. This way readers can analyze, compare and hopefully find and create their own design, which could be even better. The boat is using soap as 'fuel'. Some soap, shampoo, body wash, detergent are tested. Although some chemical such as alcohol, acetone also can be used, but this book focuses only on benign household materials. Chemical propellants will be included in the second book. Using origami of plastic paper, boat can be made with top body so it will look like a real boat. workbench to help novices take their first steps in an exciting pastime. You don't need the deftness of a surgeon or the vocabulary of an old salt to build a model. What you need is an understanding coach. Mastini leads readers from the mysteries of choosing a kit and setting up a workshop through deciphering complicated instructions and on to painting, decorating, and displaying finished models--with patience and clarity, not condescension. He reveals dozens of shortcuts: How to plank a hull "egg-shell tight"; how to build and rig complicated mast assemblies without profanity; how to create sails that look like sails. . . . And along the way he points out things that beginners usually do wrong--beforehand, not after they've taken hammers to their projects. Ship Modeling Simplified even includes an Italian-English dictionary of nautical terms, the key to assembling the many high-quality Italian kits on the American market. Model building is fun, and not nearly as difficult as some experts would have you believe. Here is everything you'll ever need to get started in a hobby that will last a lifetime.

Greg Rossel grew up cruising the waters of New York Harbor and spending time in the boatyards on the south shore of Staten Island where economics (more than anything else) made wooden boats the craft of choice. He makes his home in Maine where he specializes in the construction and repair of small wooden boats, as well as writing for several publications. Greg has been an instructor at WoodenBoat School in Maine since the mid-1980's, teaching lofting, skiff building, and the "Fundamentals of Boatbuilding".

*This book is about how to build a big, fast and beautiful Marangoni effect boat, also popular as soap boat. Before it was impossible to run a torpedo with Marangoni effect. I have found that certain torpedo design and certain propellants can produce Marangoni effect, to create thrust force, to propel torpedo. This soap boat could become a marketing idea. Because this model boat could become promotional gift toy for children soap and shampoo products. With boat dimension less than 10 cm length, and less than 4 cm width, sufficient enough as toy size . The boat is very cheap, lightweight and easy to pack and transport together with the promoted products. For very low cost mass production promotional gift, boat material can be easily painted by paper printing machine, and cut by paper stamping machine. Some boat designs and chemical propellants are tested. Indefinite possibility of boat designs and propellants, not only limited with the ones described in this book. Therefore, boat performance can be upgraded in the future. Hopefully some of readers will have a better boat design and found a better propellant. <http://maruzar.blogspot.com/2015/06/fast-model-boat-water-channel-test.html> <http://maruzar.blogspot.com/2015/07/water-molecules-energy-propel-mini.html>*
