For more than fifteen years, the manuscript editing department of the Press has overseen online publication of the monthly "Chicago Manual of Style" Q&A, choosing interesting questions from a steady stream of publishing-related queries from "Manual" users and providing thoughtful and/or humorous answers in a smart, direct, and occasionally cheeky voice. More than 28,000 followers have signed up to receive e-mail notification when new Q&A content is posted monthly, and the site receives well over half a million visitors annually. "But Can I Start a Sentence with But ?" culls from the extensive Q&A archive a small collection of the most helpful and humorous of the postings and provides a brief foreword and chapter introductions. The material is organized into seven chapters that cover matters of editorial style, capitalization, punctuation, grammar and usage, citation and quotation, formatting and other non-language issues, and a final chapter of miscellaneous items. Together they offer an informative and amusing read for editors, other publishing professionals, and language lovers of all stripes."

Collected Papers of P. L. Kapitza, Volume I compiles the scientific papers written between 1916 and 1934 by Piotr Leonidovich Kapitza, a leading Soviet physicist and Nobel laureate. This book begins by introducing the life and career of P. L. Kapitza, which includes his studies and investigations of nuclear physics, strong magnetic fields, liquefaction, liquid helium, and high-power electronics. Other topics discussed include electron inertia in molecular ampere currents; Koch recording microphotometer; metallic conductivity and its change in a magnetic field; and methods of experimenting in strong magnetic fields. The liquefaction of helium by an adiabatic method; Zeeman and Paschen-Back effects in strong magnetic fields; and theoretical and empirical expressions for the heat transfer are also emphasized in this text. This compilation is a good reference for students and researchers conducting work on the biography and scientific contributions of P. L. Kapitza.

This volume contains thirty-three selected general research papers devoted to the theory and application of the mathematics of constrained optimization, including linear programming and its extensions to convex programming, general nonlinear programming, integer programming, and programming under uncertainty. Originally published in 1971. The Princeton Legacy Library uses the latest print-on-demand technology to again make available previously out-of-print books from the distinguished backlist of Princeton University Press. These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions. The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905.

This book constitutes the refereed proceedings of the 5th International Workshop on Document Analysis Systems, DAS 2002, held in Princeton, NJ, USA in August 2002 with sponsorship from IAPR. The 44 revised full papers presented together with 14 short papers were carefully reviewed and selected for inclusion in the book. All current issues in document analysis systems are addressed. The papers are organized in topical sections on OCR features and systems, handwriting recognition, layout analysis, classifiers and learning, tables and forms, text extraction, indexing and retrieval,

document engineering, and new applications.

How do college writing teachers learn new ways to teach? Most current composition research focuses almost exclusively on student writers, ignoring the role the teacher plays in classroom development. Here is the first book to focus on college writing teachers and the ways in which they are affected by graduate rhetoric pedagogy courses. Wendy Bishop observed teachers enrolled in a doctoral seminar, titled "Teaching Basic Writing," and then conducted case studies of five of those teachers in their college writing classrooms to investigate how their teaching practices changed and how their previous professional and personal histories influenced their ability to make those changes.

Conceived as the successor to Gregg and Steinberg's *Cognitive Processes in Writing*, this book takes a multidisciplinary approach to writing research. The authors describe their current thinking and data in such a way that readers in psychology, English, education, and linguistics will find it readable and stimulating. It should serve as a resource book of theory, tools and techniques, and applications that should stimulate and guide the field for the next decade. The chapters showcase approaches taken by active researchers in eight countries. Some of these researchers have published widely in their native language but little of their work has appeared in English-language publications.

Ursula Hackett's tried-and-tested approach for essay success helps students to create brilliant, original, high-scoring essays that are enjoyable to write - and read. With dozens of hands-on exercises and clear examples, *Brilliant Essays* begins with students' everyday experience of using language, arguing a case, reading, thinking, and communicating with other people. Chapters help students to examine - and dispel - assumptions, build and control their arguments and use evidence effectively, in written assignments and timed exams. The final chapter provides clear, no-nonsense answers to frequently asked questions raised by Ursula's students at Royal Holloway, University of London and the University of Oxford and via her YouTube channel and website. Whichever subject your students study, *Brilliant Essays* will take them beyond the basics and give them the tools to reach their

academic potential.
