

Parent Child Relations Context Research And Application 2nd Edition

The fourth edition of *Developmental Psychology*: *illuminates substantive phenomena in development; *applies to the entire life span; *has relevance to everyday life; and *is comprehensively revised and updated. This textbook has been updated from the third edition to include the current status of scholarly efforts in all aspects of developmental psychology. Its purposes are to furnish inclusive developmental perspectives on major substantive areas in psychology and the substantial differences that underscore the dynamic and exciting status of contemporary developmental psychology. Developmental psychology is a major subdiscipline in its own right, with its own history and systems, perspectives, and methodologies. These perspectives, traditions, and approaches are thoroughly introduced and reviewed. In addition, many aspects of developmental psychology have obvious and immediate relevance to real-world issues and problems. Each chapter in this book exemplifies the relevance of developmental psychology through reviews of the history, theory, and substance of the subdiscipline.

The third edition of *Infancy* is a comprehensive and accessible core text for courses in infant development and early childhood development. Gross 's sensitive and engaging teaching voice seamlessly weaves together research and theory with current issues of diversity and culture.

Organized by content areas rather than by theory, this comprehensive, accessible handbook helps readers gain greater insight into how key theories have impacted today 's family research. Most competing books, organized by theory, do not provide a strong sense of the links between theory and research. Using the 2000 and 2010 decade-in-review issues of the *Journal of Marriage and Family* as a resource, the book addresses the most important topics impacting family studies research today. The introductory chapter, written by the editors, provides an overview of the role family theories have had on the field. This chapter is followed by 23 others on family-related content areas written by renowned scholars in the field. The book is organized around the most important domains in the field: parenting and parent-child relationships, romantic relationships, conflict and aggression, structural variation and transitions, demographic variations, and families and extra-familial institutions. Each of the contributors describes how theory has been used to generate new knowledge in the field and suggests future directions for how theory may be used to extend our knowledge base. The book helps readers acquire a working knowledge of the key family science theories, findings, and issues and understand how researchers make use of these theories in their empirical efforts. To maximize accessibility, each of the renowned contributors addresses a common set of issues in their chapter:

- Introduction to the content area
- Review of the key topics, issues, and findings
- A description of each of the major theories used to study that particular content area
- Limitations of the theories
- Suggestions for better use of the theories and/or new theoretical advances
- Conclusions about future theoretical developments.

An ideal text for graduate and/or advanced undergraduate family theories courses, this book 's unique organization also lends itself to use in content-based family studies/science courses taught in family studies, human development, psychology, sociology, communication, education, and nursing. Due to its comprehensive and current approach, the book also appeals to scholars and researchers in these areas.

This easy-to-read, comprehensive guide contains what you need to know on how to parent with confidence. Packed with advice and powerful tips, using the latest research on child development and parenting techniques, it offers a mine of information on how to let children flourish, take the frustration out of parenting and develop happy family relations. Authors provide guidance on developing character, knowledge, values, and skills, as well as a faith-based outlook in children, benefitting parents with kids of all ages. e many strategies and techniques offered include: teaching children how to problem-solve, make decisions, and develop self-esteem. Raising God conscious, moral, successful children, with a sense of civic responsibility in today 's world is not easy. It is also not impossible. Effective parenting is the key.

Parent-Child Relations across the Life Course

A Dynamic Perspective

An Advanced Textbook

First published in 1984. Routledge is an imprint of Taylor & Francis, an informa company.

Despite its inherent joys, the challenges of parenting can produce considerable stress. These challenges multiply—and the quality of parenting suffers—when a parent or child has mental health issues, or when parents are in conflict. Even under optimal circumstances, the constant changes as children develop can tax parents' inner resources, often undoing the best intentions and parenting courses. *Mindful Parenting: A Guide for Mental Health Practitioners* offers an evidence-based, eight week structured mindfulness training program for parents with lasting benefits for parents and their children. Designed for use in mental health contexts, its methods are effective whether parents or children have behavioral or emotional issues. The program's eight sessions focus on mindfulness-oriented skills for parents, such as responding to (as opposed to reacting to) parenting stress, handling conflict with children or partners, fostering empathy, and setting limits. The book dovetails with other clinical mindfulness approaches, and is written clearly and accessibly so that professionals can learn the material easily and impart it to clients. Featured in the text: Detailed theoretical, clinical, and empirical foundations of the program. The complete *Mindful Parenting* manual with guidelines for eight sessions and a follow-up. Handouts and assignments for each session. Findings from clinical trials of the *Mindful Parenting* program. Perspectives from parents who have finished the course. Its clinical focus and empirical support make *Mindful Parenting* an invaluable tool for practitioners and clinicians in child, school, and family psychology, psychotherapy/counseling, psychiatry, social work, and developmental psychology.

This life-span approach to parent-child relations gives readers a comprehensive, contemporary look at parent theory, research, and applications, as well as numerous historical and cultural contexts that affect parent-child relations. It covers every stage of development, including older parents and their adult children, and uses an inclusive approach that looks at a variety of differing family contexts, such as foster families, military families, and families with an LGBT member, as well as the influence of culture and ethnicity on family beliefs and behaviors. The history of theoretical and research influences of childrearing is presented early on to help students understand why parents today hold certain beliefs regarding how to raise children. Then, theory and research are interwoven through the book. Another early chapter on strategies and techniques sets the stage for ongoing discussions of parent-child relations throughout the lifespan. Written with the student in mind, Phyllis Heath's *Parent-Child Relations* presents numerous examples, discussions of the influence of technology on the lives of parents and children, pop-up videos (in the Pearson Enhanced video only) to add clarity to the material, critical thinking questions to encourage students to consider their views regarding the material, and SPOTLIGHT features presenting the influence of technology, diversity, and poverty on families. The study of parent-child relationships has long been of interest to behavioral scientists, both for its theoretical importance and for its practice and policy implications. There are, however, certain limitations to the knowledge in this area. First, research on parents and children is spread throughout a number of disciplines and as a consequence is not well integrated. Further, there has been little dialogue among researchers concerned with parents of young children and those interested in middle-aged and elderly parents and their offspring. The present volume predicates the notion that there is considerable similarity in the issues explored by researchers on different points of the life course. Contributions by leading scholars in psychology, sociology, and anthropology are organized into four sections, each of which contains a treatment of at least two stages in the life course. The sections cover attachment in early childhood and in later life, life course transitions, relationships within families, and the influence of social structural factors on parent-child relations. Although the chapters make important contributions to basic research and theory, many also deal with issues of public concern, such as day care, maternal employment, gay and lesbian relationships, and care of the elderly.

Research on parenting through the life course has developed around two separate approaches. Evolutionary biology provides fresh perspectives from life history theory using behavioral ecology and parental investment theory. At the same time, the social and behavioral sciences integrates research from long-term studies of individual development and from the collection of life histories. This path-breaking book advances evolutionary, life history research by integrating perspectives of these two approaches into a biosocial science of the life course. It examines parenthood as a commitment extending throughout life and focuses on the impact on parental and child behavior of changes in the timing, distribution, and intensity of parental investment. This perspective is particularly appropriate for research on parenting since the family is the universal human institution within which the bearing and rearing of children has been based and which transmits traditions, beliefs, and values to the young.

Family Policy and the American Safety Net shows how families adapt to economic and demographic change. Government programs provide a safety net against the new risks of modern life. Family policy includes any public program that helps families perform their four universal obligations of caregiving, income provision, shelter, and transmission of citizenship. In America, this means that child care, health care, Social Security, unemployment insurance, housing, the quality of neighborhood schools, and anti-discrimination and immigration measures are all key elements of a de facto family policy. Yet many students and citizens are unaware of the history and importance of these programs. This book argues that family policy is as important as economic and defense policy to the future of the nation, a message that is relevant to students in the social sciences, social policy, and social work as well as to the public at large. .

As Bowlby himself points out in his introduction to this seminal childcare book, to be a successful parent means a lot of very hard work. Giving time and attention to children means sacrificing other interests and activities, but for many people today these are unwelcome truths. Bowlby's work showed that the early interactions between infant and caregiver have a profound impact on an infant's social, emotional, and intellectual growth. Controversial yet powerfully influential to this day, this classic collection of Bowlby's lectures offers important guidelines for child rearing based on the crucial role of early relationships.

Unique in its contextual approach to its subject, this well-researched, applied, brief new book explores "parenting through the

lifespan." In-depth coverage of parenting strategies supports all of the book's content and guidance. It takes a cross-cultural look at five major aspects of parent-child relations--the history, philosophy, and theories of childrearing; variations in childrearing patterns; parent-child relations from a developmental perspective; challenges presented by special needs and situations; and child socialization strategies. Early on, the author examines how cultural beliefs affect parent-child relations and explores the influence of variations in families regarding marital status, sexual orientation, and non-parent adult care giving, and non-parent adult care giving. Now in the Ninth Edition, Jerry Bigner's "Parent-Child Relations," the classic resource for child development professionals and themselves, has undergone a thorough revision anchored by the vision of the late Dr. Bigner and executed by new co-author, Gerhardt. Maintaining its fundamental structure and unique approach, the text uses family systems and systemic family development as a framework to explore how parent-child relations change in tandem with developmental changes occurring with children, and the wider family system. Thoughtful updates and revisions were done to increase the effectiveness and currency of the text and continues to provide strong emphasis on various theoretical and practical models pertaining to parenting. For decades now, the text has prepared countless teachers and practitioners by its proven and practical approach, utilizing family systems and systemic development theory to explore how parent-child relations change in tandem with developmental changes occurring with children and the wider family system. The most comprehensive and current resource available to students as they prepare for working with children and families, and for their roles as parents themselves, this best-selling resource carries on the essential message of its original author, Jerry Bigner, and will continue to nurture future family scholars and practitioners for years to come.

Written from a psychological perspective while integrating cross-disciplinary viewpoints, this fully updated Second Edition takes a centered approach to exploring topics such as the reasons behind parental behavior, the effect parents and children have on each other, and social policy's ability to help families. Including the latest statistics on family functioning and with coverage of contemporary issues, George Holden's Parenting conveys the process of parenting in all its complexities.

"The brain is either in a reactive (no) state, which makes us rigid and self-conscious, putting us on high alert for rules and consequences, or in a receptive (yes) state, which is what enables curiosity and creativity, and fosters resilience. Most traditional learning environments--and many parenting approaches--necessarily trigger the "no" state in children (allowing teachers and school systems to assess and manage them), but parents can nurture the mindset that leads to authentic happiness and success by supplying neurological counterbalancing "yes brain" experiences and interactions. Dan Siegel, a thought-leader in the field of neuropsychology, and Tina Payne Bryson, who runs the parenting education/class component of his famed institute in LA, explain the underpinnings of this neurological dichotomy, and give parents the scripts, ideas and activities for igniting and wiring the "yes" state in kids of all ages. What to say to and do for the young child who is melting down (a reactive state) to help him get back to emotional balance, how to assess extra-curricular activities and deal with the urge to over-schedule our older kids (which spurs a reactive mindset), The Yes Brain is an essential tool for nurturing positive neurology--and gifting our children with profound, lifelong resilience. Decades of research have demonstrated that the parent-child dyad and the environment of the family--"which includes all people who care for and caregivers"--are at the foundation of children's well-being and healthy development. From birth, children are learning and relying on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than in the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their child's and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments that include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. Parenting Matters identifies parenting knowledge, attitudes, and beliefs associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and beliefs; barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in early childhood programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale implementation of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to be a roadmap for the future of parenting policy, research, and practice in the United States.

This important text offers data-rich guidelines for conducting culturally relevant and clinically effective intervention with Asian American families. Delving beneath longstanding generalizations and assumptions that have often hampered intervention with this diverse and growing population, expert contributors analyze the intricate dynamics of generational conflict and child development in Chinese, Korean, Filipino, and other Asian American households. Wide-angle coverage identifies critical factors shaping the Asian American family process, from parenting styles, behaviors, and values to adjustment and autonomy issues across childhood and adolescence, including problems specific to girls and young women. Contributors also make extensive use of quantitative and qualitative findings in addressing the myriad paradoxes surrounding Asian identity, acculturation, and socialization in America. Among the featured topics: Rising challenges and opportunities of uncertain times for Asian American families; A race perspective on an empirical review of Asian American parental racial-ethnic socialization. Socioeconomic status and child/youth outcomes in Asian American families. Daily associations between adolescents' race-related experiences and mental health processes. Understanding and addressing parent-adolescent conflict in Asian American families. Behind the disempowerment of parenting: expanding the framework to understand Asian-American women's self-harm and suicidality. Asian American parenting: vital reading for social workers, mental health professionals, and practitioners working family therapy cases who see Asian American youth. Practice-oriented case examples and resources for empowering interventions with Asian American parents and families. This popular, topically organized, and thoroughly updated child and adolescent development text presents you with the latest research, and practical advice that developmentalists have to offer today. Authors David R. Shaffer and Katherine Kipp provide you with a current and comprehensive overview of child and adolescent development, written in clear, concise language that speaks directly to you. The authors also focus on application showing how theories and research apply to real-life settings. You will gain an understanding of developmental principles that will help you in your roles as parents, teachers, nurses, social workers, pediatricians, psychologists, or in any other capacity by which you may one day influence the lives of developing children. Development from Birth to Age 3

Supporting Parents of Children Ages 0-8

Children are already learning at birth, and they develop and learn at a rapid pace in their early years. This provides a critical foundation for lifelong progress, and the adults who provide for the care and the education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to nurture young children and secure their future success - the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well. Transforming the Workforce for Children Birth Through Age 8 explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress. Transforming the Workforce for Children Birth Through Age 8 offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve outcomes for children.

In recent decades, advances in biomedical research have helped save or lengthen the lives of children around the world. With improved therapies, child and adolescent mortality rates have decreased significantly in the last half century. Despite these advances, pediatricians and others argue that children have not shared equally with adults in biomedical advances. Even though we want children to benefit from the dramatic and accelerating rate of progress in medical care that has been fueled by scientific research, we do not want to place children at risk of being harmed by participating in clinical studies. Ethical Conduct of Clinical Research Involving Children considers the necessities and challenges of this type of research and reviews the ethical and legal standards for conducting it. It also considers problems with the interpretation and application of these standards and conduct, concluding that while children should not be excluded from potentially beneficial clinical studies, some research that is ethically permissible for adults is not acceptable for children, who usually do not have the legal capacity or maturity to make informed decisions about research participation. The book looks at the need for appropriate pediatric expertise at all stages of the design, review, and conduct of a research project to effectively implement policies to protect children. It argues persuasively that a robust system for protecting human research participants in general is a necessary foundation for protecting child research participants in particular.

This Handbook provides an innovative, interdisciplinary perspective on theory, research and methodology on dynamic processes in parent-child relations. It focuses on cognitive, behavioural and relational processes that govern immediate parent-child interactions and long-term relationships. It considers the nature of change, and what makes such interactions and relationships 'work' the way they do. The concern with dynamics represents an emerging research perspective, which complements a long-standing alternative tradition primarily concerned with the products of parenting. This volume focuses on process rather than outcomes, bi-directional influence rather than either parent effects or child effects, transformation in behaviour and relationships in addition to continuity and transmission, and parents and children as agents and actors (what parents and children do and think) rather than as static traits or variables.

The third edition of Handbook of Marriage and the Family describes, analyzes, synthesizes, and critiques the current research and theory about family relationships, family structural variations, and the role of families in society. This updated Handbook provides the most

comprehensive state-of-the art assessment of the existing knowledge of family life, with particular attention to variations due to gender, socioeconomic, race, ethnic, cultural, and life-style diversity. The Handbook also aims to provide the best synthesis of our existing scholarship on families that will be a primary source for scholars and professionals but also serve as the primary graduate text for graduate courses on family relationships and the roles of families in society. In addition, the involvement of chapter authors from a variety of fields including family psychology, family sociology, child development, family studies, public health, and family therapy, gives the Handbook a multidisciplinary and interdisciplinary framework.

The world has changed since the first edition of this pioneering text was published in 1979, and with it the context of parenting has changed. Parents today must not just help their children learn socialization, but also teach them the skills and abilities they need to cope with the rapidly changing society of their future. Using the family systems model, the author explains how families function, how they strive to maintain stability over time, and how they change and adapt as children grow up. The book offers the following pedagogical tools to help students prepare for their roles as professionals working with parents and families as well as becoming parents themselves: **Frequently Asked Questions** –allow students to see parenting concerns and issues not only through the eyes of a parent, but also those of a therapist who consults with the parent. **Focus On** –highlights information discussed in the chapter. **Parenting Reflections** –provide opportunities for readers to check their understanding of the content they’ve just read about. Also promotes critical thinking and encourages empathetic involvement with the parenting topics being discussed. **Family Snapshots** –These case studies throughout the book provide students with a broader understanding of how the various theories found in human development and family studies are applied to parent-child relations. **New To This Edition: NEW:** Includes expanded coverage of attachment between parents and children–Explains how it affects development of both adults and children. Increases student understanding of the importance of nurturance at all levels of development. **NEW!** Gives a much greater emphasis on the cultural context of parenting throughout and especially in Chapters 1 and 2–Describes how parenting is shaped by family ecological and cultural factors. Provides for increased development of empathy and understanding of the global human development issues affecting parenting topics. **Note:** This is the standalone book, if you want the book/access card order the ISBN listed below: 013704335X / 9780137043354 **Parent-Child Relations: An Introduction to Parenting & MyVirtualChild -- Access Card Package** consists of: 0135002192 / 9780135002193 **Parent-Child Relations: An Introduction to Parenting** 0205690335 / 9780205690336 **MyVirtualChild -- Standalone Access Card**

This book focuses on parents and teachers as adult learners, who should be growing and learning along with the children in their care. It lays out a theory of what parents and teachers need to care for children and themselves and then it shows how the author has assisted parents and teachers to put these theories into practice. McDermott relies on stories and listening to the voices of parents, teachers and children to make her case. She weaves together the latest theories and research with these stories. She uses narratives of actual school meetings, workshops, parent planning and discussion groups, testimonies, newsletters, and research of others in the field, to demonstrate applications of theory and research. She fills a gap by focusing on parents from all socioeconomic backgrounds. **Key Features:** o Focuses on parents and teachers as adult learners o Focuses on the dynamic process of parenting and teaching o Provides a theory to practice model to support parents, families and teachers o Provides a tool or guide for thinking through problems and finding solutions that take into consideration the needs of all involved.

The purpose of this book, is to present a rather simple argument. Parents' thoughts about childrearing and the ways in which they interact with children to achieve particular parenting or developmental goals, are culturally determined. Within any culture, children are shaped by the physical and social settings within which they live, culturally regulated customs and childrearing practices, and culturally based belief systems. The psychological "meaning" attributed to any given social behavior is, in large part, a function of the ecological niche within which it is produced. Clearly, it is the case that there are some cultural universals. All parents want their children to be healthy and to feel secure. However, "healthy" and "unhealthy," at least in the psychological sense of the term, can have different meanings from culture to culture.

Depression is a widespread condition affecting approximately 7.5 million parents in the U.S. each year and may be putting at least 15 million children at risk for adverse health outcomes. Based on evidentiary studies, major depression in either parent can interfere with parenting quality and increase the risk of children developing mental, behavioral and social problems. Depression in Parents, Parenting, and Children highlights disparities in the prevalence, identification, treatment, and prevention of parental depression among different sociodemographic populations. It also outlines strategies for effective intervention and identifies the need for a more interdisciplinary approach that takes biological, psychological, behavioral, interpersonal, and social contexts into consideration. A major challenge to the effective management of parental depression is developing a treatment and prevention strategy that can be introduced within a two-generation framework, conducive for parents and their children. Thus far, both the federal and state response to the problem has been fragmented, poorly funded, and lacking proper oversight. This study examines options for widespread implementation of best practices as well as strategies that can be effective in diverse service settings for diverse populations of children and their families. The delivery of adequate screening and successful detection and treatment of a depressive illness and prevention of its effects on

parenting and the health of children is a formidable challenge to modern health care systems. This study offers seven solid recommendations designed to increase awareness about and remove barriers to care for both the depressed adult and prevention of effects in the child. The report will be of particular interest to federal health officers, mental and behavioral health providers in diverse parts of health care delivery systems, health policy staff, state legislators, and the general public.

Since its origin in the early 1980s, developmental psychopathology has become one of the most significant frameworks for child clinical psychology. This volume of essays explores this framework from an integrative Christian viewpoint, combining theory, empirical research and theology to explore a holistic understanding of children's development.

This practical guide offers mental health professionals a detailed, step-by-step description on how to conduct Parent-Child Interaction Therapy (PCIT) - the empirically validated training program for parents with children who have disruptive behavior problems. It includes several illustrative examples and vignettes as well as an appendix with assessment instruments to help parents to conduct PCIT.

"At last: a book that melds research on family ties in later life inclusively. Connidis' book is not simply a research compendium but a theoretical synthesis of value to both scholars and students. Connidis' clear writing style makes it an excellent choice for students... I recommend this book both to teachers and researchers in the areas of family and aging." -- JOURNAL OF MARRIAGE AND THE FAMILY Presenting a broad examination of the issues surrounding family ties and aging, this advances textbook provides an integrated and thorough representation of current research in the field. Whereas book on families and aging have traditionally focused on ties to a spouse and to children and grandchildren, Connidis's coverage is more extensive and more reflective of contemporary society. She includes groups and relationships that have typically been neglected, such as single, divorced, and childless older people and their family relationships, as well as sibling relationships among the elderly, live-in partnerships not formalized by marriage, and the family ties forged by gays and lesbians over their life course. Family Ties and Aging weaves the vast range of information we now have about the many facets of family relationships and aging into a critical, comprehensive, and integrated whole.

This title was first published in 2003. Using a behaviourist and quantitative approach, this study examines the vexed questions surrounding the economic and cultural integration of immigrants into the Netherlands. The authors use the Dutch case as a specific example of a wider European problem. The book examines the two opposing theoretical and political points of view on integration, whether immigrants need to adapt to the dominant culture before they are able to fully participate in socio-economic life, or whether as they participate in socio-economic life they will gradually adapt to the dominant culture. Based primarily on quantitative research, the authors unravel the complex interrelationship between cultural and socio-economic integration. They explore some of the barriers to entry into Dutch society and discuss questions of ethnic identification, parenting, educational achievement and the labour market. Since contextual factors clearly affect integration, the study also looks at the effects of migrant policies and immigration policies in different West European countries and examines social distance from immigrant groups by the native Dutch population.

Following the success of its best-selling predecessors, the Fourth Edition of Harriette Pipes McAdoo's Black Families retains several now classic contributions while including updated versions of earlier chapters and many entirely new chapters. The goal through each revision of this core text has been to compile a book that focuses on positive dimensions of African American families. The book remains the most complete assessment of black families available in both depth and breadth of coverage. Cross-disciplinary in nature, the book boasts contributions from such fields as family studies, anthropology, education, psychology, social work, and public policy.

In the topically organized Child Development: An Active Learning Approach, Fourth Edition, authors Laura E. Levine and Joyce Munsch take students on an active journey toward understanding children and their development. Active Learning activities integrated throughout the text capture student interest and turn reading into an engaged learning process.

Through the authors' active learning philosophy, students are challenged to test their knowledge, confront common misconceptions, relate the material to their own experiences, and participate in real-world activities independently and with children. Because consuming research is equally important in the study of child development, Journey of Research features provide both historical context and its links to today's cutting-edge research studies. Students will discover the excitement of studying child development while gaining skills they can use long after course completion.
