

## Patologia Generale Vol 1 2

The present volume summarizes current research on type 2 diabetes, its etiology, pathogenesis and long-term vascular and neurological consequences, with special emphasis on molecular and biochemical mechanisms. Alterations in insulin secretion are comprehensively treated, focusing on the role of glucokinase as glucose sensor. Moreover, insulin action is analyzed with regard to both nonoxidative glucose utilization and glucose oxidation. Concerning the complications in chronic diabetes, topics covered include the effects of high glucose concentration on cellular and endothelial functions and on the glucose phosphorylation rate in non-insulin-sensitive tissues. Furthermore, the role of oxidative stress and advanced glycation end products as well as the significance of alterations in lipoprotein structure are considered. Finally, the pericyte loss in retinopathy and microalbuminuria as related to cardiovascular risk are discussed. Taken as a whole, the contributions included in this book represent a large body of information that will be of great interest to diabetologists, endocrinologists and internists interested in both the basic and clinical aspects of diabetes and its complications.

Molecular and Cell Biology of Type 2 Diabetes and Its Complications

Botanico-Periodicum-Huntianum

Current Topics in Cellular Regulation, Volume 19 analyzes the advances in the general area of cellular regulation. This book discusses the evidence indicating that synthesis of the histidine enzymes is regulated and drugs affecting ribonucleotide reductase. The analogy principle in comparative biochemistry of allosteric regulation of metabolism, steady-state model of glucose metabolism in adipose tissue, and sensitivity of enzyme activity to changing ion concentrations are also elaborated. This publication likewise covers the cAMP-dependent protein kinases of nervous tissue and amino acid sequences of IGF I and II. This volume is a good reference for biologists and researchers conducting work on the basic mechanisms involved in the regulation of diverse cellular activities.

Frontiers in Pharmacology was launched in 2010, with a number of sections which were eventually reorganized. The founding Field Chief Editor was Prof. Théophile Godfraind, an eminent scientist active in cardiovascular pharmacology, who pioneered the discovery of calcium antagonists. At that time he invited me to serve as Chief Editor for a section named "Analytical and Experimental Pharmacology". Later on, our section enlarged and was re-named as "Experimental Pharmacology and Drug Discovery" to outline the translational potential of fundamental pharmacological research and theoretical analysis to the improvement of human health, through the invention of novel medicinal products. We are now entering the 10th year of editorial activity, which sees the publication of the 1,000th paper in our section. Such an achievement is very rewarding for us and our community, but it is even more remarkable when placed into the timeline of our development. In fact, in a 10-year frame we have significantly grown in quantity and quality, e.g. both in number of published papers and in scientific impact. [From a personal perspective by Salvatore Salomone, Specialty Chief Editor]

Edizione italiana a cura di: Vincenzo Eusebi Considerato il testo internazionale di riferimento per studenti e medici per lo studio della patologia generale e specialistica, il "Robbins giunge, aggiornato e rivisto, alla sua ottava edizione. Gli Autori, tutti opinion leader del settore, spiegano la correlazione tra la patogenesi delle malattie e la clinica, utilizzando tutti gli strumenti a disposizione: la morfologia, la biologia cellulare e la genetica. Punti di forza •I 29 capitoli che costituiscono il libro sono suddivisi in due sezioni: Patologia generale e Malattie degli organi e degli apparati. •Particolarmente aggiornati il capitolo 3 con nuove informazioni sulla biologia cellulare e sui fattori di crescita; il capitolo 5 con dati recenti sulla diagnosi molecolare che riflette le nuove conoscenze fondamentali per lo studio di malattie come cancro e diabete; il capitolo 9 che fa il punto sulla sempre maggiore importanza del fattore ambientale nello sviluppo delle varie patologie; il capitolo 17 propone nuove nozioni sulla patogenesi della malattia infiammatoria intestinale e dei tumori gastrointestinali; Il capitolo 22, tratta le malattie dell'apparato genitale femminile, include la discussione delle basi molecolari del cancro, dell'endometriosi e della preeclampsia. •L'opera è corredata da oltre 1600 figure a colori di alta qualità. •Il Pin Code consente l'accesso al sito Student Consult che contiene il testo completo in lingua originale, casi clinici, tutte le immagini che sono scaricabili, un microscopio virtuale per esaminare le immagini selezionate a diversi livelli di ingrandimento e le voci bibliografiche singolarmente consultabili via Pub Med.
