Elayn Martin-Gay believes "every" student can succeed and that is the motivating force behind her best-selling texts and acclaimed video program. With Martin-Gay you get 100% consistency in voice from text to video! "Prealgebra 5e "is appropriate for a 1-semester course in Prealgebra, and was written to help students effectively make the transition from arithmetic to algebra. To reach this goal, Martin-Gay introduces algebraic concepts early and repeats them as she treats traditional arithmetic topics, thus laying the groundwork for the next algebra course your students will take.

This book focuses on the fundamental concepts of arithmetic, algebra, geometry and trigonometry needed by learners in technical trade programs. A wealth of exercises and applications, coded by trade area, include such trades as machine tool, plumbing, carpentry, electrician, auto mechanic, construction, electronics, metal-working, landscaping, drafting, manufacturing, HVAC, police science, food service, and many other occupational and vocational programs. The authors interviewed trades workers, apprentices, teachers, and training program directors to ensure realistic problems and applications and added over 100 new exercises to this edition. Chapter content includes arithmetic of whole numbers, fractions, decimal numbers, measurement, basic algebra, practical plane geometry, triangle trigonometry, and advanced algebra. For individuals who will need technical math skills to succeed in a wide variety of trades. Drawing from many disciplines to provide an up-to-date presentation of the key questions, topics and controversies in life span development, this book takes a chronological approach to human development. It focuses on context and culture while illustrating that the status of human development is inextricably embedded in a study of complex and changing cultures. Maintaining an open-ended perspective throughout, the volume encompasses many different and opposing views and encourages readers to develop an informed point of view. This volume presents perspectives and research methods and examines approaches to understanding human development, heredity and environment. It reviews the physical, cognitive, and language development, as well as personality development and sociocultural development in infancy, toddlerhood, early and middle childhood, adolescence, young adulthood, middle adulthood and older adulthood. For those interested in human physical, cognitive and sociocultural development.

A Guided Approach

This Study Guide was written specifically to assist you with Chemistry for Changing Times, 11th Edition, by presenting, in condensed form, the major concepts, theories, facts and applications found in the text. Every chapter is keyed to the main text and is presented in six sections: Key Terms - correspond to bold-faced terms in the text and represent key expressions in the language of chemistry. Chapter Summaries - provide an overview of material to be covered and an outline that can be tailored and annotated with lecture material. Chapter Objectives - alert you to essential concepts and principles covered in the chapter and serve as checkpoints when you study for exams. Discussion - food for thought, along with common-sense commentary about chemistry. Examples Problems with Additional Problems - modeled on the text problems, these examples will help you sharpen your problem-solving skills. Self-Test and Answers - practice exams that are designed for self-assessment and test preparation. Book jacket.
