This book examines the theory and praxis of the legal concept of subsidiarity and the policy paradigm of multilevel governance, providing an updated overview on how subnational and national authorities engage within the EU institutional framework. Providing a theoretical assessment of real-life case studies, the book reflects on a number of

key events from the negotiations of the European Convention to the process that led to the "Brexit" referendum and assesses the key agendas and institutional ethos of most actors involved in EU policymaking. It particularly focusses on the EU engagement of so-called non-privileged actors, such as subnational authorities from the UK, Germany, Austria, Italy, the Netherlands and Scandinavia, as well as national and regional parliaments. The author goes on to examine the

sometimes selfish behaviour and individual agendas of the European Commission, European Parliament, Member States and even the European Court of Justice but also identifies many constructive ways of interaction that can decisively frame how EU decisions are made. This comprehensive book will be a useful reference to students, practitioners and academic researchers working in European politics, policymaking, public policy and EU law and integration.

A gentle maiden aunt who has been victimized for years unexpectedly retaliates through her talent for making life-sized dolls filled with honey. "The Youngest Doll," based on a family anecdote, is a stunning literary expression of Rosario Ferré's feminist and social concerns. It is the premier story in a collection that was originally published in Spanish in 1976 as *Papeles de Pandora* and is now translated into English by the author. The daughter of a former governor of Puerto Rico, Ferré portrays

women loosening the constraints that have bound them to a patriarchal culture. Anger takes creative rather than polemical form in ten stories that started Ferré on her way to becoming a leading woman writer in Latin America. The upper-middle-class women in *The Youngest Doll*, mostly married to macho men, rebel against their doll-like existence or retreat into fantasy, those without money or the right skin color are even more oppressed. In terms of

power and influence, these women stand in the same relation to men as Puerto Rico itself does to the United States, and Ferré stretches artistic boundaries in writing about their situation. The stories, moving from the realistic to the nightmarish, are deeply, felt, full of irony and black humor, often experimental in form. The imagery is striking: an architect dreams about a beautiful bridge that “would open and close its arches like alligators making love”; a Mercedes Benz “shines in the dark like a chromium

rhinoceros.” One story, “The Sleeping Beauty,” is a collage of letters, announcements, and photo captions that allows chilling conclusions to be drawn from what is not written. The collection includes Ferré’s discussion of “When Women Love Men,” a story about a prostitute and a society lady who unite in order to survive, and one that illustrates the woman writer’s “art of dissembling anger through irony.” In closing, she considers how her experience as a Latin American woman with ties

to the United States has brought to her writing a dual cultural perspective. Where is the common ground for feminist theory and Latin American culture? Jean Franco explores Mexican women's struggle for interpretive power in relation to the Catholic religion, the nation, and post-modern society; and examines the writings of women who wrote under the shadow of recognized male writers, as well as the works of more marginal figures. In this original and skillfully written book Franco

demonstrates the many feminisms that emerge in apparently rigid and adverse situations, and provides the foundation for a more comprehensive, less ethnocentric feminist theory. In this book, Arturo Santa-Cruz advances an understanding of power as a social relationship and applies it consistently to the economic realm in United States relations with other countries of the Western Hemisphere. Following the academic and popular debate on the ebb and flow of US hegemony, this work

centers the analysis in a critical case for the exercise of US power through its economic statecraft: the Americas—its historical zone of influence. The rationale for the regional focus is methodological: if it can be shown that Washington's sway has decreased in the area since the early 1970s, when the discussion about this matter started, it can be safely assumed that the same has occurred in other latitudes. The analysis focuses on three regions: North America, Central America and South America.

Since each region contains countries that have at times maintained very different relationships with the United States, the findings contribute to a better understanding of the practice of US power in the sub-region in question, adding greater variability to the overall results. Transhumance is a form of pastoralism that has been practised around the world since animals were first domesticated. Such seasonal movements have formed an important aspect of many European farming systems for several thousand years, although they have declined markedly since the nineteenth century. Ethnographers and geographers have long been involved in

recording transhumant practices, and in the last two decades archaeologists have started to add a new material dimension to the subject. This volume brings together recent advances in the study of European transhumance during historical times, from Sweden to Spain, Romania to Ireland, and beyond that even Newfoundland. While the focus is on the archaeology of seasonal sites used by shepherds and cowherds, the

contributions exhibit a high degree of interdisciplinarity. Documentary, cartographic, ethnographic and palaeoecological evidence all play a part in the examination of seasonal movement and settlement in medieval and post-medieval landscapes. Notwithstanding the obvious diversity across Europe in terms of livestock, distances travelled and socio-economic context, an extended introduction to

the volume shows that cross-cutting themes are now emerging, including mobility, gendered herding, collective land-use, the agency of non-elite people and competition for grazing and markets. The book will appeal not only to archaeologists, but to historians, geographers, ethnographers, palaeoecologists and anyone interested in rural lifeways across Europe. On January 20, 1949 US President Harry S. Truman officially opened

the era of development. On that day, over one half of the people of the world were defined as underdeveloped and they have stayed that way ever since. This book explains the origins of development and underdevelopment and shows how poorly we understand these two terms. It offers a new vision for development, demystifying the statistics that international organizations use to measure development and

introducing the alternative concept of buen vivir: the state of living well. The authors argue that it is possible for everyone on the planet to live well, but only if we learn to live as communities rather than as individuals and to nurture our respective commons. Scholars and students of global development studies are well-aware that development is a difficult concept. This thought-provoking book offers them advice for the

future of development studies and hope for the future of humankind. The relentless pursuit of economic growth is the defining characteristic of contemporary societies. Yet it benefits few and demands monstrous social and ecological sacrifice. Is there a viable alternative? How can we halt the endless quest to grow global production and consumption and instead secure socio-ecological conditions that support lives worth living for all? In this compelling

Essential reading for all concerned citizens, policy-makers, and students, this book will be an important contribution to one of the thorniest and most pressing debates of our era.

All coastal areas are facing a growing range of stresses and shocks, the scale of which now poses

threats to the resilience of both human and environmental coastal systems. Responsible agencies are seeking better ways of managing the causes and consequences of the environmental change process in coastal zones. This volume discusses the basic principles underpinning a more integrated approach to coastal management and highlights the obstacles that may be met in practice in both developed and developing

countries. Successful strategies will have to encompass all the elements of management, from planning and design through financing and implementation, as highlighted in this book.

Cruces, New Mexico. Sponsored by the GCI, the Museum of New Mexico State Monuments, ICCROM, CRATerre-EAG, and the National Park Service, under the aegis of US/ICOMOS, the event was organized to promote the exchange of ideas, techniques, and research findings on the conservation of earthen architecture. Presentations at the conference covered a diversity of subjects, including the historic traditions of earthen architecture, conservation and restoration, site preservation, studies in consolidation and seismic mitigation, and examinations of moisture

problems, clay chemistry, and microstructures. In discussions that focused on the future, the application of modern technologies and materials to site conservation was urged, as was using scientific knowledge of existing structures in the creation of new, low-cost, earthen architecture housing. While cities often act as the engines of economic growth for developing countries, they are also frequently the site of growing violence, poverty, and inequality. Yet, social theory, largely developed and tested in the Global North, is often inadequate in tackling the

Access Free Perspectivas De Transformaci N Eco Social

realities of life in the dangerous parts of cities in the Global South. Drawing on the findings of an ambitious five-year, 15-project research programme, *Social Theories of Urban Violence in the Global South* offers a uniquely Southern perspective on the violence–poverty–inequalities dynamics in cities of the Global South. Through their research, urban violence experts based in low- and middle-income countries demonstrate how "urban violence" means different things to different people in different places. While some researchers adopt or adapt

existing theoretical and conceptual frameworks, others develop and test new theories, each interpreting and operationalizing the concept of urban violence in the particular context in which they work. In particular, the book highlights the links between urban violence, poverty, and inequalities based on income, class, gender, and other social cleavages. Providing important new perspectives from the Global South, this book will be of interest to policymakers, academics, and students with an interest in violence and exclusion in the cities of

This volume provides a unique cross-disciplinary perspective on the external ecological and internal psycholinguistic factors that determine sign bilingualism, its development and maintenance at the individual and societal levels. Multiple aspects concerning the dynamics of contact situations involving a signed and a spoken or a written language are covered in detail, i.e. the development of the languages in bilingual deaf children, cross-modal contact phenomena in the productions of child and adult signers, sign bilingual education concepts and

practices in diverse social contexts, deaf educational discourse, sign language planning and interpretation. This state-of-the-art collection is enhanced by a final chapter providing a critical appraisal of the major issues emerging from the individual studies in the light of current assumptions in the broader field of contact linguistics. Given the interdependence of research, policy and practice, the insights gathered in the studies presented are not only of scientific interest, but also bear important implications concerning the perception,

Debating the Earth highlights the diversity of political responses to environmental issues by bringing together forty essential readings in environmental politics. These readings cover various definitions of environmental crisis, its causes and effects, responses to it in institutions, politics, policies, community organizing, and lifestyle. They are organized in a way that emphasizes the differences and debates across the various schools of thought on environmental affairs. The key debates cover: The Severity of Environmental Problems: How real are ecological limits? Reformist Responses to

Environmental Issues: Can expert administrators or liberal democratic institutions respond effectively? Environment and Economics: Is there a clash between economic and environmental values? Can sustainable development reconcile them? Green Critiques: What sorts of radical changes are advocated by deep ecologists, socialist ecologists, ecofeminists, environmental justice activists and others? Society, the State, and the Environment: How can green critiques be put into political practice in social movements and democratic structures? The book offers a comprehensive

introduction to environmental politics and will be a valuable text for all students of environmental politics and policy, and anyone with an interest in environmental issues.

Jürgen Habermas and John Rawls are perhaps the two most renowned and influential figures in social and political philosophy of the second half of the twentieth century. In the 1990s, they had a famous exchange in the Journal of Philosophy. Quarreling over the merits of each other's accounts of the shape and meaning of democracy and legitimacy in a contemporary society, they also revealed how

great thinkers working in different traditions read—and misread—one another’s work. In this book, James Gordon Finlayson examines the Habermas-Rawls debate in context and considers its wider implications. He traces their dispute from its inception in their earliest works to the 1995 exchange and its aftermath, as well as its legacy in contemporary debates. Finlayson discusses Rawls’s Political Liberalism and Habermas’s Between Facts and Norms, considering them as the essential background to the dispute and using them to lay out their different conceptions of justice,

politics, democratic legitimacy, individual rights, and the normative authority of law. He gives a detailed analysis and assessment of their contributions, assessing the strengths and weaknesses of their different approaches to political theory, conceptions of democracy, and accounts of religion and public reason, and he reflects on the ongoing significance of the debate. The Habermas-Rawls Debate is an authoritative account of the crucial intersection of two major political theorists and an explication of why their dispute continues to matter.

The sexual revolution: an evocative term, but what meaning can be given to it today? How does 'sexuality' come into being and what connections does it have with the changes that have affected personal life on a more general plane? In answering these questions, Anthony Giddens disputes many of the dominant interpretations of the role of sexuality in modern culture. The emergence of what the author calls plastic sexuality - sexuality freed from its intrinsic relation to

Access Free Perspectivas De Transformaci N Eco Social

reproduction - is analysed in terms of the long-term development of the modern social order and social influences of the last few decades. Giddens argues that the transformation of intimacy, in which women have played the major part, holds out the possibility of a radical democratization of the personal sphere. This book will appeal to a large general audience as well as being essential reading for students and professionals.

book appeared in 1982, El Salvador has experienced the most radical social change in its history. Ten years of civil war, in which a tenacious and creative revolutionary movement battled a larger, better-equipped, US-supported army to a standstill, have ended with 20 months of negotiations and a peace accord that promises to change the course of Salvadorean society and politics. This book traces the history of El Salvador, focusing on the oligarchy and the armed forces, that shaped the Salvadorean army and political system. Concentrating on the period since 1960, the author sheds new light on the US role in the increasing militarization of the country and the origins of the

oligarchy-army rupture in 1979. Separate chapters deal with the Catholic church and the revolutionary organizations, which challenged the status quo after 1968. In the new edition, Dr Montgomery continues the story from 1982 to the present, offering a detailed account of the evolution of the war. She examines why Duarte's two inaugural promises, peace and economic prosperity could not be fulfilled and analyzes the electoral victory of the oligarchy in 1989. The final chapters closely follow the peace negotiations, ending with an assessment of the peace accords, and evaluate the future prospects for El Salvador and for the 1994 elections.

develops a comparative model of intergovernmental bargaining to account for variation in the capacity of federations in the developing world to undertake economic policy reform, suggesting that many market reform policies are a function of a constant process of bargaining between national and regional leaders struggling for political survival. As the degree of national-regional disagreement mounts, collective action on reforms that require implementation at multiple levels of government becomes more difficult. The degree to which the two factors conflict depends on four factors: the individual electoral interests, a shared intergovernmental

fiscal system, the manner in which regional interests are represented in national policy making and the levers of partisan influence national leaders have over subnational politicians. In testing the argument with a combination of cross-sectional time-series and case study analysis, this book contributes to the broad literatures on development and the comparative political economy of federalism and decentralization. Critiquing the arcades of nineteenth-century Paris--glass-roofed rows of shops that served as early malls--the author, who wrote the work in the 1920s and 1930s, covers thirty-six still-trenchant topics, including fashion, boredom, photography,

For a long time, the term ‘ ideology ’ was in disrepute, having become associated with such unfashionable notions as fundamental truth and the eternal verities. The tide has turned, and recent years have seen a revival of interest in the questions that ideology poses to social and cultural theory, and to political practice. Mapping Ideology is a comprehensive reader covering the most important contemporary writing on the

subject. Including Slavoj Žižek ' s study of the development of the concept from Marx to the present, assessments of the contributions of Luk á cs and the Frankfurt School by Terry Eagleton, Peter Dews and Seyla Benhabib, and essays by Adorno, Lacan and Althusser, Mapping Ideology is an invaluable guide to the most dynamic field in cultural theory.

The idea of ecological modernisation originated in Western Europe in the 1980s, gaining attention around the world by the late 1990s. At the core of this social scientific and policy-oriented approach is the view that contemporary societies have the capability of dealing with their environmental crises.

Experiences in some countries demonstrate that modern institutions

Access Free Perspectivas De Transformaci N Eco Social

can incorporate environmental interests into their daily routines. Elsewhere, economic and political interests dominate development trajectories and environmental deterioration continues, challenging the premises of ecological modernisation. This volume brings together research on ecological modernisation practices around the world. Studies on Western, Central, and Eastern Europe, the USA, and Southeast Asia examine the applicability of this approach to advanced industrial countries, transitional economies and developing countries respectively. Authors critically examine the premises of ecological modernisation theory, assess its value for understanding past and present environmental transformations, and outline paths for

designing future sustainable development. Taken together, the studies in collected this volume offer significant refinements, extensions and critiques of ecological modernisation theory and suggest important directions for future research on social and policy dimensions of environmental change.
